British Columbia. By S. D. SCORR, Vancouver, B.C.....	23-26

II. PHYSICAL CHARACTERISTICS OF CANADA.

Geographical Features.....	32-39
1. Drainage Basins of Canada.....	33
2. Lengths of Principal Rivers and Tributaries in Canada.....	34-35
3. Area and Elevation of the Great Lakes.....	35
4. Areas of Principal Canadian Lakes by Provinces.....	36-38
Economic Geology in Canada, 1915. By WYATT MALCOLM, Department of Mines, Ottawa.....	39-43
Flora of Canada. By J. M. MACOUN, C.M.G., F.L.S., Assistant Botanist and Naturalist, Department of Mines, Ottawa, and M. O. MALTE, Ph. D., Dominion Agrostologist, Department of Agriculture, Ottawa. With 7 illustrations.....	43-55
Faunas of Canada. By P. A. TAVERNER, Department of Mines, Ottawa. With 6 illustrations.....	55-63

III. AREA AND POPULATION.

1. Land and Water Area of Canada by Provinces and Territories.....	63
2. Population of Canada by Provinces and Territories in the years 1871-81-91-1901-11.....	64
3. Population of Canada by Provinces and Territories in 1871 and 1911 and increase in each decade from 1871 to 1911.....	65
4. Population of Canada by Provinces and Territories, 1901 and 1911.....	65
5. Area and Population of Canada in 1911 by Provinces and Districts and Population in 1901.....	65-70
6. Population of Cities and Towns having over 5,000 inhabitants in 1911, compared with 1871-81-91-1901.....	71-73
7. Population of Incorporated Towns and Villages having 1,000 to 5,000 inhabitants in 1911 and corresponding figures for 1901.....	73-76
8. Urban Population of Canada by Size Groups, 1901 and 1911.....	77
9. Rural and Urban Population of Canada in 1901 and 1911 by Provinces, and increase or decrease in the decade.....	77
10. Rural and Urban Population of Canada by Provinces and Sexes, 1911.....	78
11. Population of Canada by Sexes, 1901 and 1911.....	79
12. Ratio of Females to Males in Rural and Urban Divisions, 1911.....	80
13. Conjugal Condition of the people of Canada, classified as single, married, widowed, divorced, legally separated and not given, by Provinces, Census of 1911.....	80
14. Distribution of Foreign-born Population as between Hostile, Allied and Neutral Countries, 1911.....	81
15. Foreign-born Males, 21 years of age and over, by Citizenship and by Provinces, 1911.....	82
16. Foreign-born Male Population of Canada, 21 years of age and over, by Birthplace and Citizenship, 1911.....	82
17. Foreign-born Population of Canada, by Sex and Year of Arrival, 1911.....	83
18. Foreign-born Population of Canada by Provinces, 1911, with Year of Arrival.....	83
19. Foreign-born Population of Canada by Country of Birth and by Provinces, 1911.....	84
20. Foreign-born Population in Cities of 15,000 and over, 1911.....	85
21. Male Population of Canada, 18 to 45 years of age, classified according to nativity, by single years and by Provinces, Census, 1911.....	86-88
22. Percentage Proportion by Provinces of the Male Population 18 to 45 years of age, which was Canadian-born, British-born or Foreign-born on June 1, 1911.....	89
23. Percentage Distribution by Provinces of the Canadian-born, British-born and Foreign-born Male Population, 18 to 45 years of age on June 1, 1911.....	89
24. Population by Age-Periods and Sex with Percentages for Census Years 1881-1911.....	90
25. Workers by Sex and Province for Census years 1881-1911.....	90
26. Workers by Industries for Census years 1881-1911.....	91
27. Workers by Industries and Sex for Census Years 1891-1911.....	91
28. Workers by Industries and by Canadian or non-Canadian Birth, 1911.....	92
29. Workers by Age-Periods, 1911.....	92
30. Percentage Distribution of Workers by Industries, Sex and Age-Periods, 1911.....	92
31. Workers by Detailed Classification of Industries and by Sex for Census Years 1901 and 1911.....	93-99
32. Area and Population of the United Kingdom and British Possessions, 1911.....	100-102
33. Area and Population of the Principal Foreign Countries of the World.....	103-105

Vital Statistics.

34. Number of Births, Marriages and Deaths, by Provinces, 1911-1914.....	PAGE. 106-107
35. Number of Births, Marriages and Deaths, by Principal Cities, 1913 and 1914.....	107-109

Immigration.

36. Number of Immigrant Arrivals in Canada, 1897-1916.....	111
37. Arrivals at Inland and Ocean Ports in Canada in fiscal years 1909-1916.....	112
38. Rejection of Immigrants upon arrival at Ocean Ports and Deportations after admission, by principal causes, for the fiscal years 1903-1916.....	113
39. Number by Nationalities of Deportations after Admission, 1903-1916.....	114
40. Juvenile Immigrants and Applications for their Services, 1901-1916.....	114
41. Sex, Occupation and Destination of Immigrants for the fiscal year ended March 31, 1915.....	115
42. Destination of Immigrants into Canada by Provinces, 1901-1916.....	116
43. Record of Chinese Immigration, 1886-1915.....	116
44. Number of Chinese in Canada by Provinces, according to the Censuses of 1901 and 1911.....	117
45. Record of Oriental Immigration, 1901-1916.....	117
46. Expenditure on Immigration in the fiscal years 1868-1915.....	117

IV. EDUCATION.

1. Number of Schools, Teachers and Pupils in Canada by Provinces, 1901-1915.....	119-122
2. Normal and Model Schools in Nova Scotia, New Brunswick, Quebec, Ontario and Manitoba, 1901-1915.....	123-125
3. Number of Teachers and Pupils in Model Schools, Academies and Roman Catholic Classical Colleges in Quebec, 1901-1914.....	125-126
4. Number of Teachers and Pupils in Collegiate Institutes and High Schools in Ontario, 1901-1915.....	126
5. Expenditure for Public Education in Canada by Provinces, 1901-1915.....	126-129
6. Universities of Canada: Foundation, Affiliation, Faculties and Degrees.....	131-132
7. Universities of Canada: Number of Teaching Staff and Students.....	133
8. Universities of Canada: Financial Statistics, 1915.....	134
9. Colleges of Canada: Foundation, Affiliation, Faculties and Degrees.....	135
10. Colleges of Canada: Number of Teaching Staff and Students.....	135
11. Colleges of Canada: Financial Statistics, 1915.....	136

V. CLIMATE AND METEOROLOGY.

The Weather of Canada during the year 1915. From the Monthly Weather Map of the Dominion Meteorological Service, Toronto. With Map showing Precipitation during April to August, inclusive, 1915.....

1. Temperature of the year 1915 at Representative Stations, compared with Normal Annual Averages for the period 1883 to 1907.....	137-140
2. Precipitation of the year 1915, at Representative Stations, compared with Normal Annual Averages for the period 1883 to 1907.....	141
	142

VI. PRODUCTION.

Agriculture.

1. Area, Yield and Value of principal Field Crops in Canada, 1910-1915.....	146-169
2. Areas and Yields of Wheat, Oats, Barley and Flax in the Northwest Provinces, 1911-15.....	170
3. Total Areas and Values of Field Crops in Canada, 1911-15.....	171
4. Numbers of Farm Live Stock by Provinces, 1911-1915.....	172
5. Average Values of Farm Animals and of Wool, as estimated by Correspondents, 1908, 1909, 1910, 1914 and 1915.....	173
6. Numbers in June and Values in December of Farm Live Stock in Canada, as estimated by Correspondents, 1914 and 1915.....	174
7. Average Values per acre of Occupied Farm Lands in Canada, as estimated by Correspondents, 1908, 1909, 1910, 1914 and 1915.....	175
8. Average Wages of Farm Help in Canada as estimated by Correspondents, 1909, 1910, 1914 and 1915.....	176
9. Cheese and Butter Production in Canada, 1900, 1907 and 1910.....	177-178
10. Production of Home-made Butter and Cheese in Canada, 1870-80-90, 1900 and 1910.....	178
11. Quantity and Value of Condensed Milk Products by Provinces, 1910.....	179
12. Cold Storage Warehouses in Canada, 1916.....	179-184
13. Estimated Areas and Yields of Tobacco in Canada, 1913-1915.....	185
14. Number of Cattle, Sheep and Swine, Slaughtered under the Meat and Canned Foods Act, 1907.....	186
15. Per Capita Consumption of Meat in the United Kingdom, the United States, Canada, France and Germany.....	187
16. Allocation of Payments to Provincial Governments under the Agricultural Instruction Act, 1913-14-1916-17.....	188
17. Stocks of Wheat in Canada on February 8, 1915, and March 31, 1916.....	189
18. Average Rate of Seeding per acre of the Principal Cereals in Canada, 1915.....	190
19. Weekly Range of Prices of Wheat at Winnipeg and Fort William, 1915.....	191-192
20. Weekly Range of Prices of Barley, Oats and Flax at Winnipeg and Fort William, 1915.....	193-194
21. Prices in British Markets of Canadian Wheat, Wheat Flour and Oats, 1915.....	194-195
22. Prices in British Markets of Canadian Bacon and Hams, 1915.....	196-197
23. Prices in British Markets of Canadian Cheese, 1915.....	198

Agriculture—con.

	PAGE.
24. Yearly Average Prices of Wheat in England, 1641-1770.....	199
25. Yearly Average Prices of Wheat, Barley and Oats in England and Wales, 1771-1915.....	200
26. Annual Average Steamship Freight Rates for Heavy Grain, from Montreal to Liverpool for the Navigation Seasons 1861-1915.....	201
27. Annual Average Steamship Freight Rates, for Wheat, from New York to Liverpool, 1879-1915.....	202
28. Average Steamship Freight Rates, for Wheat from Montreal to Liverpool, by months, during the St. Lawrence Navigation Seasons, 1903-1915.....	202-203
29. Steamship Freight Rates for Wheat from New York to Liverpool, during each week, 1909-1915.....	203-205
30. World's Production of Cereals and Potatoes, 1914-15.....	206-208
31. Numbers of Farm Live Stock by Principal Countries of the World, 1905 and 1914....	208-213

Agricultural Experiment Stations in Canada.

32. Dominion Experimental Farms and Stations.....	213-217
Dominion Experimental Farms and Stations, 1915.....	214
Provincial Agricultural Experiments.....	217-223

Forestry.

33. Square, Waney or Flat Lumber, cut on Occupied Farm Lands, 1910, with Prices per Unit 1900 and 1910.....	224
34. Logs for Lumber cut on Occupied Farm Lands, 1910, with Prices per Unit 1900 and 1910.....	224
35. Miscellaneous Forest Products cut on Occupied Farm Lands, 1910, with Prices per Unit, 1900 and 1910.....	224
36. Estimated Values of Forest Products, 1912-1915.....	225
37. Quantities and Values of the cut of Lumber, Shingles and Lath by Provinces, 1914 and 1915.....	225
38. Quantities and Values of Wood used in the manufacture of Pulp, 1913-15.....	227
39. Kinds of Wood used in the manufacture of Pulp by quantities and values, 1913, 1914 and 1915.....	227
40. Quantities of Wood used and of Pulp manufactured, 1914 and 1915.....	228
41. Quantities and Values of Cross-ties and Poles purchased by Railway and Electric Companies, 1914 and 1915.....	228

Fisheries.

42. Number and Value of Fishing Vessels, Boats, Nets, Traps, etc., used in the Sea and Inland Fisheries of Canada, 1914-1915.....	230
43. Government Bounties to Fishermen in the fiscal years, 1911-1914.....	231
44. Quantities and Values of all Fish marketed in Canada in 1913-14, and 1914-15.....	232-233
45. Quantities and Values of the catch of the Inland Fisheries of Canada, 1913-14 and 1914-15.....	233
46. Total Value of Fisheries by Provinces in the fiscal years 1911-1915.....	234
47. Total Value of the Fisheries of Canada in the fiscal years 1870-1915.....	234

Minerals.

48. Quantities and Values of Minerals produced in Canada, 1914 and 1915.....	236
49. Increase or Decrease in Principal Mineral Products, 1915.....	237
50. Mineral Production of Canada in the Calendar Years 1914 and 1915.....	237-238
51. Value of Mineral Production in Canada, 1886-1915.....	239
52. Value of Minerals produced in Canada by Provinces in the Calendar Years 1914 and 1915.....	239
53. Quantity of Gold produced in Canada by Provinces during the Calendar Years 1862-1915.....	239-240
54. Value of Gold produced in Canada by Provinces during the Calendar Years 1862-1915.....	241
55. Quantity and Value of Silver produced in Canada during the Calendar Years 1887-1915.....	242
56. Quantity and Value of Silver produced in Canada by Provinces during the Calendar Years 1887-1915.....	242
57. Quantity and Value of Copper produced in Canada by Provinces during the Calendar Years 1886-1915.....	243
58. Quantity and Value of Nickel produced in Canada during the Calendar Years 1889-1915.....	244
59. Production of principal Minerals in Canada for the Calendar Years 1909-1915.....	244-245
60. Production of Cement in Canada for the Calendar Years 1902-1915.....	245
61. Character and Quantities of Ores treated in Canadian Smelters 1910-1915.....	245
Iron Blast Furnaces in Canada in 1915.....	246
62. Quantity and Value of Mineral Products in British Columbia for the Calendar Years 1913-1915.....	248

Manufactures.

63. Statistics of Manufactures of Canada, 1900 and 1910.....	248
64. Statistics of Manufactures by Provinces, 1900, 1905 and 1910.....	249

VII. TRADE AND COMMERCE.

Exports and Imports.

	PAGE.
1. Aggregate External Trade of Canada, fiscal years 1868-1916	251-252
2. Exports to the United Kingdom, to the United States and to Other Countries of Merchandise the produce of Canada, 1868-1916	253
3. Imports from the United Kingdom, from the United States and from Other Countries of Merchandise entered for Home Consumption, 1868-1916, excluding Coin and Bullion	254
4. Aggregate Trade of Canada by Countries during the fiscal year ended March 31, 1915, including Coin and Bullion	255
5. Exports from Canada of Home and Foreign Produce, by values, 1868-1916, with Duties collected on Exports, 1868-1892	256
6. Imports into Canada entered for consumption by values, with Duties on Imports, 1868-1916	257
7. Values of Exports from Canada to the United Kingdom, to the United States and to Other Countries by classes of Merchandise the produce of Canada in five-year averages, and for the fiscal years 1911-16	258-260
8. Values of Domestic and Foreign Exports from Canada to All Countries by classes of Merchandise, 1905-1916	260-261
9. Values of Exports from Canada of Home Produce to the British Empire and to Foreign Countries in the five fiscal years 1911-1915	262-263
10. Values of Imports into Canada of Merchandise entered for consumption from the British Empire and from Foreign Countries in the five fiscal years 1911-1915; also of Coin and Bullion	263-264
11. Value of Merchandise imported into and exported from Canada through the United States during the fiscal years ended March 31, 1914-1915	265
12. Exports of Canada to United Kingdom in quantities and values by classes of home produce in the five fiscal years 1911-1915	266-281
13. Exports of Canada to United States in quantities and values by classes of home produce in the five fiscal years 1911-1915	282-300
14. Exports of Canada to All Countries in quantities and values by classes of home produce in the five fiscal years 1911-1915	300-321
15. Imports of Canada from the United Kingdom in quantities and values by classes entered for consumption in the five fiscal years 1911-1915	321-353
16. Imports of Canada from the United States in quantities and values by classes entered for consumption in the five fiscal years 1911-1915	354-386
17. Imports of Canada from All Countries in quantities and values by classes entered for consumption in the five fiscal years 1911-1915	386-419
18. Values of Exports which may be classed as Manufactures in the five fiscal years 1911-1915	420
19. Summary of Values of Exports to the United Kingdom, to the United States and to Other Countries of Home Produce which may be classed as Manufactures in the five fiscal years 1911-1915	421
20. Values of Imports which may be classed as Manufactures in the five fiscal years 1911-1915	422
21. Summary of Imports from the United Kingdom, from the United States and from Other Countries which may be classed as Manufactures in the five fiscal years 1911-1915	423
22. Quantity and Value of Wood, Blocks and Other, for Pulp exported to the United States, 1904-1915	424
23. Value of Exports of Wood, Blocks and Other, for Pulp, the produce of Canada, 1890-1903	424
24. Value of Exports of Wood Pulp, the produce of Canada, 1890-1907	424
25. Exports from Canada of Wood Pulp, by Countries, in the fiscal years 1910-1915	425
26. Values of Exports and Imports of Fish, 1902-1915	426
27. Exports of Fish, the produce of Canada, by principal countries, in the fiscal years 1914-1915	426
28. Exports of Coal the produce of Canada, 1902-1915	426
29. Quantities and Values of Exports from Canada to the British and Foreign West Indies during the fiscal year ended March 31, 1915	427-429
30. Quantities and Values of Imports from the British and Foreign West Indies during the fiscal year 1915	429-431
31. Values of Exports (domestic and foreign) to the British and Foreign West Indies by Countries during the fiscal years 1913-1915	432
32. Values of Total Imports (dutiable and free) from the British and Foreign West Indies by Countries during the fiscal years 1913-1915	432
33. Value of Imports and Exports from and to British and Foreign West Indies, 1901-1915	433
34. Imports into Canada of Anthracite and Bituminous Coal for home consumption, during the fiscal years 1901-1915	433
35. Imports into Canada of Portland Cement, 1898-1915	434
36. Percentage Proportions of Imports from United Kingdom and United States, respectively, to totals of dutiable and free in the 48 fiscal years 1868-1915	434-435
37. Average ad valorem Rates of Duty collected on Imports from United Kingdom, United States and all Countries in the 48 fiscal years 1868-1915	435-436
38. Value of Imports entered for consumption at certain Ports during the fiscal year ended March 31, 1915	437
39. Value of Exports of Canadian produce by principal ports during the fiscal year ended March 31, 1915	437
40. Value of total Exports and Imports, Imports entered for consumption and amount of duty collected, by Provinces, during the fiscal year ended March 31, 1915	437
41. Imports of certain Articles of Raw Material for home consumption, 1902-1915	438-439
42. Imports of Canada by values entered for consumption from British Empire and Foreign Countries under the General, Preferential and Treaty Rate Tariffs in the four fiscal years 1912-1915	438-439

Exports and Imports—con.

	PAGE.
43. Trade of Canada by Classes of Produce, compared as to Quantity and Value, for 1914 and 1915.....	440
44. Values of Total Exports and Imports entered for Home Consumption (including Coin and Bullion), during the fiscal year ended March 31, 1916.....	441
45. Quantities and Values of Principal Agricultural and Animal Products imported into the United Kingdom during the calendar years 1914 and 1915.....	442-443
46. Quantities and Values of selected Animal and Agricultural Food Products imported into the United Kingdom, by Countries whence imported, during the five calendar years 1911-1915.....	444-451

Grain Statistics.

47. Number and Storage Capacity of Canadian Grain Elevators in the crop years 1901-1916.....	452-454
48. Quantities of Grain inspected during the fiscal years 1913-1915.....	454-456
49. Quantities of Grain inspected during the fiscal years ended March 31, 1913, 1914 and 1915.....	457
50. Shipments of Grain by vessels from Fort William and Port Arthur for the navigation seasons 1914 and 1915.....	458
51. Shipments of Grain by vessels and all rail route from Fort William and Port Arthur for the crop years ended August 31, 1914 and 1915.....	458

Bounties.

52. Bounties paid in Canada on Mineral Products and Binder Twine, 1896-1915.....	460-461
53. Bounties paid to Cordage Companies on Manila Fibre used in the manufacture of Binder Twine and Cordage, 1914-1915, and with totals for 1910-1915.....	461

Patents, Copyrights, Trade Marks, Etc.

54. Number of Canadian Patentees by Province of Residence for the fiscal years 1907-1915.....	462
Copyrights, Trade Marks, etc.....	463

VIII. TRANSPORTATION AND COMMUNICATIONS.

Steam Railways.

1. Steam Railway Mileage under Construction in Canada at June 30, 1915.....	466
2. Record of Steam Railway Mileage, 1835-1915.....	466
3. Steam Railway Mileage by Provinces, 1909-1915.....	467
4. Capital Liability of Steam Railways, 1876-1915.....	467
5. Areas of Land Subsidies granted to Steam Railways by the Dominion and Provincial Governments up to June 30, 1915.....	468
6. Mileage, Capital, Earnings and Operating Expenses of Steam Railways, 1915.....	468-471
7. Steam Railway Statistics, 1875-1915.....	472
8. Earnings and Operating Expenses of Steam Railways per mile of line, 1908-1915.....	473
9. Distribution of Operating Expenses of Steam Railways, 1913-1915.....	473
10. Aid to Railways in the form of Guarantees of Bonds, Interest, etc., by the Dominion and Provincial Governments, 1915.....	473
11. Analysis of the Total Financial Aid given to Steam Railways up to June 30, 1915.....	473
12. Total Amount of Dominion Government Aid paid to Steam Railways up to June 30, of each year, 1875-1915.....	474
13. Cost of Construction, Working Expenses and Revenue of Government Railways, 1868-1915, and before Confederation.....	475
14. Capital Expenditure by Dominion Government for construction of Government Steam Railways to March 31, 1915.....	476
15. Mileage and Rolling Stock of Steam Railways, 1910-1915.....	476
16. Freight hauled on Steam Railways, 1911-1915.....	477-478
17. Number of Employees in Service of Steam Railways, 1910-1914.....	478
18. Total Salaries and Wages, with Ratio of same to gross Earnings and Operating expenses on Steam Railways, 1907-1915.....	479
19. Average Daily Salaries and Wages paid on Steam Railways, 1909-1914.....	479
20. Distribution of Salaries and Wages on Steam Railways, 1911-1914.....	479
21. Number of Employees by Groups and Classes with Number of Days worked and Amount of Salaries and Wages Paid on Steam Railways, 1915.....	480-481
22. Number of Passengers, Employees and Others Killed and Injured on Steam Railways, 1898-1915.....	482
23. Number of Persons Killed and Injured on Steam Railways, 1913-1915.....	483

Electric Railways.

24. Electric Railway Statistics, 1901-1915.....	484
25. Mileage and Equipment of Electric Railways, 1913-1915.....	484

NOTES.

The statistics of manufactures in 1891, 1901 and 1911 are for works employing five hands and over, except in the case of butter and cheese factories, flour and grist mills, electric light plants, lumber, lath and shingle mills, lime kilns, brick and tile works and fish preserved. The figures in 1891 for all industries are as follows:—Capital \$354,620,750, number of employees 370,256, salaries and wages \$100,663,650 and value of products \$476,198,886.

In the foregoing Summary the statistics of immigration, fisheries, trade, shipping, the Post Office, the public debt, revenue and expenditure and the Post Office and Government Savings banks relate to the fiscal year ended June 30 in 1901 and ended March 31 in 1911–15. Mineral, banking, insurance and loan companies' statistics relate to the calendar years and railway statistics to the years ended June 30. The statistics of population, agriculture, dairying industries and manufactures are either those of the Census from 1901 to 1911, or are estimates based thereon for 1912 to 1915. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

THE CANADA YEAR BOOK, 1915.

The Canada Year Book of 1915 has followed largely the lines of immediately preceding issues. The volume has been edited by Mr. ERNEST H. GODFREY, F.S.S., and grateful acknowledgments of valuable co-operation are tendered to officers of the Dominion and Provincial Governments and of Municipalities throughout Canada. The tables have again been compiled by Mr. JOSEPH WILKINS and Mr. JAMES SKEAD, and the diagrams drawn by Mr. R. E. WATTS.

R. H. COATS,
Dominion Statistician
and Controller of Census.

Census and Statistics Office,
Ottawa, September 20, 1916.

PREFACE.

The present issue of the Canada Year Book contains the following special articles: (1) Local Government of Canada by various writers; (2) Economic Geology in Canada, 1915; (3) Flora of Canada; (4) Faunas of Canada.

Following the general rule adopted last year, articles and tables in the edition of 1914 not requiring alteration or bringing up to date have been omitted. A selected list of articles and tables in previous issues is given on pages 694 and 695.

In Section III (Area and Population), tables relating to the foreign-born population, the population of military age and the occupations of the people, as derived from the Census returns of 1911, replace other Census tables previously given. Statistics of the universities and of higher education generally have been added to the tables of elementary and secondary education in Section IV (Education). Amongst other new statistics in Section VI (Production), are tables of grain prices and of ocean freight rates over long series of years and of the numbers of farm live stock in the principal countries of the world. This Section includes also a description of the Dominion and Provincial Agricultural Experiment Stations. To Section VII (Trade and Commerce) have been added tables showing the increase or decrease due to variation in quantity and in price of the exports and imports of Canada, by principal classes of products, for the year 1915 as compared with 1914. In Section X (Finance) the results are given of further efforts to collect municipal statistics, the new tables presenting (a) statistics of a general character and (b) financial statistics. Section XI (Administration) includes an outline of the work of the Commission of Conservation and finally Section XII (Principal Events of the Year) summarizes the Acts of the Provincial Legislatures in addition to those of the Dominion Parliament as heretofore.

ERNEST H. GODFREY,
Editor.

I.—LOCAL GOVERNMENT OF CANADA.

MARITIME PROVINCES.

By THOMAS BARNARD FLINT, M.A., LL.B., D.C.L., Clerk of the House of Commons of Canada, Ottawa.

THE constitution and legislative powers of the provinces of the Dominion are in their general outlines as settled and regulated by the British North America Act, 1867, and amending acts. But in the development of local administration and in the working out of local problems, the provinces have varied considerably. These variations have depended primarily upon the stages and forms of local self-government in force at the time of Confederation, and secondarily upon the financial and industrial policies of the legislatures which then assumed control. Nova Scotia and New Brunswick were two of the three original provinces which formed the federal union of Canada. Prince Edward Island became part of the federal system in 1873.

Nova Scotia, New Brunswick and Prince Edward Island, immediately after entering the union found themselves each equipped with a Lieutenant-Governor appointed by the Governor-General. This official holds office, generally speaking, for five years from the date of his appointment. He is not removable except for cause assigned and communicated to Parliament. The provisions relating to the powers, duties and responsibilities of Lieutenant-Governors are to be found in sections 58 to 68, inclusive, of the British North America Act, 1867, and apply uniformly to all Lieutenant-Governors throughout the Dominion.

The legislatures of each of the three Maritime Provinces, upon entering the union, consisted of the Lieutenant-Governor and of two Houses, styled the Legislative Council and the Legislative Assembly. These legislatures had the same exclusive powers assigned to them as to the other provinces entering the union at the same or at any subsequent period. One of the most important of these powers is that of the amendment, from time to time, of the Constitution of the province, except as regards the office of the Lieutenant-Governor. Like all the other provinces, they have the power of direct taxation within the province, of borrowing money, of establishing public offices, of disposing of the crown lands of the province, of the maintenance and establishment of a great variety of public and reformatory institutions and of municipalities with such powers as the province may see fit to grant. The list of exclusive provincial powers also includes such important matters as the making of laws relating to licences for raising revenue for provincial or municipal purposes; providing for local works and undertakings of every description (except certain classes specially reserved to the federal power); incorporating companies with provincial objects; and legislation respecting the solemnization of marriage. The whole vast field of property and civil rights within the province, the administration of justice and the

LOCAL GOVERNMENT OF CANADA.

constitution, maintenance and organization of provincial courts, with both civil and criminal jurisdiction, as well as the procedure in civil matters in those courts, are retained under provincial jurisdiction.

The exclusive control of each province over the subject of education has given rise to legal and constitutional questions of the highest importance. Their adjustment has engaged the attention of legislatures, of parliament and of the courts of Canada as well as the privy council of the Mother Country from time to time almost since the day of the union. The meeting of provincial responsibilities in this matter has demanded great expenditures and called forth administrative capacity and devotion to scholarship and to the welfare of the young which the people of the provinces may consider with pride and satisfaction.

The provinces have also legislated upon, and devoted large sums of money to the promotion of agriculture, and to some extent immigration in which they have been assisted by the federal administration, which also has jurisdiction over these subjects. These powers are of course common to all the provinces.

NOVA SCOTIA.

THIS province has made no organic changes in its constitution since the union in 1867. In 1867, the Legislative Council consisted of 36 members and the Legislative Assembly of 55 members. The number of members of the Legislative Council is now 21 and of the Assembly 43. Legislative councillors are appointed for life, and the members of the Assembly are elected for four years, the Assembly term consisting of that period. The constitutional relations of the ministry to the Assembly are based on the well recognized principles of

responsible government in accordance with which the ministry retains office only so long as it is supported by a majority in the Legislative Assembly. This rule applies to all the provinces of Canada. Many efforts made towards abolishing the Legislative Council in Nova Scotia have proved abortive. The local ministry or cabinet, styled the Executive Council, consists of the Prime Minister (being the Provincial Secretary and President of the Council), the Attorney-General and the Commissioner of Works and Mines. These are salaried officials, and the other members are six in number without office. Agriculture, immigration and education are under the control and management of the government through certain boards and councils, each with its secretary and staff of officials.

The sources of the principal revenues are (1) mines and minerals upon which certain royalties are charged, together with license fees and rentals; (2) the federal subsidy and interest on balances due from the Dominion, paid by virtue of the British North America Acts; (3) interest on railway loans and advances, succession duties, payments from the Dominion Government under the Agricultural Instruction

MARITIME PROVINCES.

Act; (4) crown lands and other fees and dues paid in to the Provincial Secretary's office. In 1915 the total revenue from all sources was \$3,154,359, including \$1,000,000 temporary loan and \$100,000 loan for war distress.

Municipal Institutions.—Municipal administration in Nova Scotia has been developed since Confederation. Previous to that event the local government of counties and townships was confided to the magistracy, which was an appointed body, holding their commissions for life and not responsible in any way to the electorate. In the early years of its history this body did much useful and important public service, yet abuses here and there existed on account of the irresponsible nature of their tenure of office, which rendered reform and public accountability very difficult to obtain. Public opinion, however, and the controlling influence of the legislatures operating steadily upon even irresponsible bodies of life-appointed magistrates made the institution as it existed fairly acceptable to the people generally. In 1864 an act providing for the optional incorporation of counties and townships was passed, but few counties or districts took advantage of the privilege thus accorded. In 1875, the incorporation of the counties and certain townships was made compulsory, twenty-four municipalities being then established. In 1895, the Towns Incorporation Act was passed making the incorporation of towns throughout the province optional. At the present time thirty-eight towns are incorporated.

The county councils consist of councillors elected by the ratepayers, usually one for each polling district, but in some districts two are provided for. The warden or presiding officer is chosen each year by the council. The mayor of the town is elected by the ratepayers and holds office for two years. The city of Halifax, the capital of the province, has a special charter, the mayor being elected annually and the eighteen aldermen (or members) for three years, six retiring each year but being eligible for re-election.

The establishment of these municipal institutions gave a great impetus to local improvements, and although the rate and amount of taxation were considerably increased, the credit of the towns and municipalities is excellent. The total assessed valuation of real and personal property of the twenty-four municipalities of Nova Scotia is not less than \$42,717,000 and of the incorporated towns over \$40,000,000, to which must be added the property owned by the municipalities and towns themselves, amounting to over \$3,000,000. The total liabilities (bonded and other debts) of the municipalities are about \$1,000,000, and of the towns about \$6,500,000.

The exercise of the powers of the councils, the election of their members and the duties and responsibilities of their officials, their meetings, proceedings and by-laws, their methods and forms of taxation, as well as the limitation of their borrowing powers, are controlled and regulated in each particular by statutes rigidly enforced by provincial authority or by the courts. The training of large numbers of public spirited citizens in the practical exercise of the duties of self-government

LOCAL GOVERNMENT OF CANADA.

is not the least of the advantages of the municipal systems of Canada. They furnish a rich fund of talent and experience upon which to draw for the wider spheres of provincial and federal legislation.

Judiciary.—The provincial courts consist of (1) the supreme court, which is a court of appeal and also a circuit court, and (2) county courts. The supreme court consists of a chief justice and six other judges. One of these is a judge in equity, who also acts in divorce causes and as admiralty judge of the exchequer court of Canada. This court has original jurisdiction in all matters not specially delegated to the lower courts and appeal jurisdiction from the county courts. The county courts have a limited original jurisdiction and an appeal jurisdiction from probate and magistrates' courts in certain cases. The judges of this court are seven in number, each having a district of jurisdiction covering a county or group of counties and holding terms of court in the county towns of their respective districts.

The judges of the supreme and county courts are appointed and paid by the Dominion Government, but the procedure of the courts in all civil matters is regulated by provincial legislation. The purely provincial courts and courts of probate have jurisdiction over wills and intestate estates. Stipendiary and police magistrates' courts and courts of justices of the peace are also under provincial jurisdiction. The judges of these courts and justices of the peace are appointed by the local government and are paid, in some cases by salaries and in others by fees. The sheriffs, clerks, registrars and officers of all the courts are appointed by the provincial authorities.

In criminal cases the jurisdiction and procedure of all the courts are fixed by federal statutes. The procedure as to the selection of grand and petit jurors, of revisers of voters' lists and assessment courts are fixed by the provincial statutes. In each county, and in some counties in one or more districts of a county, are offices for the registry of deeds and of all documents pertaining to transfers of or affecting titles to real estate as well as those creating and discharging liens on personal property.

NEW BRUNSWICK.

THE province of New Brunswick in all essential features of provincial administration is similar to its neighbour, Nova Scotia, but some differences may be noted. The province entered Confederation with a Legislative Council of 40 members holding their seats for life, a Legislative Assembly of 40 members and an Executive Council of nine members. Under its powers of changing the provincial constitution the Legislative Council was abolished by an act passed on April 16, 1891. For many years an agitation for its abolition had continued, and the govern-

ments of the period refrained from filling vacancies until the number of members was so reduced that the passage of an abolition act became

MARITIME PROVINCES.

comparatively an easy matter. The retiring members of the Council retained their title and precedence for life. The Assembly at present is composed of 47 members, and the Executive Council is composed of (1) the Premier who is also Minister of Lands and Mines, (2) the Minister of Public Works, (3) the Provincial Secretary-Treasurer, (4) the Attorney-General and (5) the Minister of Agriculture, all of whom receive salaries. Each of these ministers has a departmental staff under his direction.

The ordinary revenue in 1915 amounted to \$1,634,079 and the ordinary expenditure to \$1,626,634.

In New Brunswick the subject of public instruction is under the management of a Board of Education consisting of the Lieutenant-Governor of the Province, the members of the Executive Council, the Chancellor of the University of New Brunswick and the Chief Superintendent of Education.

Municipal Institutions.—On the subject of municipal institutions, under which the people have more complete control over their local affairs, the province of New Brunswick has passed through stages of development similar to those of Nova Scotia. An interesting passage will be found in Hannay's History of New Brunswick, where, writing on this subject, he observes:

"Sir William Colebrooke and Sir Edmund Head had both regretted the failure of attempts to establish municipal institutions throughout the province, but they perhaps did not discern that this failure was due to the influence of the magistrates in sessions, who did not like to be deprived of their power of controlling the affairs of the counties. These magistrates naturally resisted every improvement, which they denounced as innovations, and they were supported generally by the Legislative Council.

"The system of county government was as bad as possible, because the magistrates were not responsible to any person. The condition of the county accounts was never made public, and it was not until a comparatively late period in the history of the province that the Grand Jury obtained legislative authority to inspect the county accounts.

"Municipal institutions came in the course of years, but not till long after Sir Edmund Head had taken his departure from the province. Since then the influence of the people upon the municipal government has been strengthened by the incorporation of most of the towns in the province; so that the people have an opportunity not only of knowing how their money is being spent but of directing the expenditure."

In New Brunswick the first municipal act was passed in 1851. This act, which was subsequently amended, rendered incorporation optional. But these acts were not in many cases taken advantage of. The counties were, however, divided into parishes, districts having a certain amount of local autonomy and some limited powers of administration, which have been recognized in subsequent municipal legislation. They are provided with local courts presided over by commissioners who are ex-officio justices of the peace, and in some cases they are provided with stipendiary or police magistrates. These commissioners have civil jurisdiction in debts not exceeding eighty dollars and in cases of tort when the damages claimed do not exceed thirty-two dollars.

LOCAL GOVERNMENT OF CANADA.

At the time of confederation the municipal system had been very slightly developed. But in 1877 an act providing for compulsory municipal incorporation was put in force, and, with its amendments, is substantially in force at the present time. It provides that county councils be constituted as bodies corporate, having two councillors elected yearly from each parish in the county. The councils elect from among their members a presiding officer who is styled the warden and who holds office until the next election of councillors. Councils may themselves, however, provide by by-law for their election biennially, a provision which does not apply to the municipality of the city and county of St. John. The city of St. John, which in 1785 was known as "Parr Town", received a charter in that year through Lieutenant-Governor Carleton, a brother of the famous soldier, Sir Guy Carleton (afterwards Lord Dorchester). The qualifications of voters for the councils are very liberal. Every male, or female person, being a widow or unmarried, of the age of 21 years or over, being a British subject, a ratepayer of the parish having an income or personal property or both combined to the amount of one hundred dollars, is entitled to vote. A resident of the parish having real property of any value, or, if not a resident, having real property to the value of one hundred dollars, is also entitled to vote. The dates and time of meeting of the councils are fixed by statute and differ in different municipalities. In addition to a warden each elects a secretary, a treasurer (the two offices may be combined in one person) and an auditor, who may not be a councillor nor hold any office under the council. The councils also appoint overseers of the poor, constables, commissioners of highways, collectors of rates and other parish and county officials as may be necessary. Councillors under some circumstances also act as revisers of voters' lists. The warden is required to publish each year a full and detailed financial statement of the affairs of the municipality which shall be signed by the auditor and himself.

The financial condition of the county municipalities of the province is excellent. From the latest available returns it is found that ten counties out of fifteen (not including the city and county of St. John, the richest in the province) have an assessable valuation of real and personal property of over thirty million dollars, with insignificant liabilities. The other municipalities would probably represent as favourable a condition if returns were available. The city of St. John, the commercial capital of the province, with a population of about 58,000, was the first Canadian city to adopt government by commission. Its valuation for assessment purposes in 1915 was \$36,187,000 and its liabilities were less than \$5,000,000. The city of Fredericton, the capital of the province, with a population of 8,000, has a valuation of real and personal property for assessment of \$5,000,000 with an outstanding indebtedness of \$486,000.

MARITIME PROVINCES.

PRINCE EDWARD ISLAND.

AT the time of entering the union the government of Prince Edward Island consisted of a Governor and an Executive Council, a Legislative Council of 13 members and a House of Assembly of 30 members. The Legislative Council was made elective in 1862 and so continued until its abolition after the union in 1873. The former Legislative Council districts, after the passage of the Abolition Act, elected members to the Legislative Assembly, fifteen in number, while the same districts elected members to the Assembly on a different franchise, thus practically amalgamating the two Houses into one Assembly of 30 members. The electoral system, as far as voting is concerned, is practically one of manhood suffrage. The Executive Council of Prince Edward Island consists of (1) the President of the Council, (2) the Provincial Secretary-Treasurer, who is also Commissioner of Agriculture, (3) the Commissioner of Public Works and seven members without portfolio.

With regard to the judiciary, the supreme court has a chief justice and two assistant judges. The chief justice is also the local judge in admiralty of the exchequer court. The supreme court is also a court of appeal and has jurisdiction in appeal chancery cases. It has original jurisdiction both in civil and criminal matters. In civil cases of debt the action must be for an amount above \$32, and all cases beyond the jurisdiction of the county court may be tried before a judge of the supreme court. The assistant judges of this court have also chancery powers. There is a surrogate and probate court for the province with one judge. A system of county courts is established consisting of three judges, one for each county. These are appointed and paid by the federal government and have jurisdiction in suits up to the sum of one hundred and fifty dollars. Education is under the direction of a Board of Education consisting of the members of the Executive Council of the province and the Superintendent of Education, who is also secretary of the Board. Agricultural education is assisted from the grants made by the federal government of which the yearly amount is over \$27,000. The Agricultural Department works in this matter in conjunction with the Department of Education with the happiest results.

A distinguishing feature of enterprise in Prince Edward Island is the breeding of fur-bearing animals for which the climate, soil and general surroundings seem peculiarly well adapted. The industry has proved very profitable, and the Commissioner of Agriculture in his latest report expresses satisfaction with the progress so far made¹.

In 1915 the ordinary revenue amounted to \$470,730 and the expenditure to \$510,345.

¹ See also page 188.

LOCAL GOVERNMENT OF CANADA.

QUEBEC.

By C. J. MAGNAN, Inspector General of Roman Catholic Schools, Quebec.

Political Organization.—Under the constitution conferred by the British North America Act, 1867, the Legislature of Quebec may enact laws respecting education, such public works as relate only to the province, the administration of the public lands of the province, colonization, agriculture, asylums, prisons, organization of the legal tribunals, municipal institutions and, in a word, everything which concerns its particular interests. The province has its own Legislature modelled after that of the Federal Parliament, and this Legislature is composed of the Lieutenant-Governor, a Legislative Council and a Legislative Assembly. There is also an Executive Council, which is composed of the Lieutenant-Governor representing the King, assisted by councillors or ministers. The Lieutenant-Governor convenes, prorogues and dissolves the Houses, and to him is reserved the power of sanctioning the laws passed by the Legislative Assembly and the Legislative Council. Each of the ministers who compose the Executive Council has usually charge of a department or ministry, and the following departments are now in existence: (1) Department of the Attorney-General; (2) Department of the Provincial Secretary; (3) the Treasury; (4) Lands and Forests; (5) Colonization, Mines and Fisheries; (6) Agriculture; (7) Public Works and Labour; (8) Roads.

Legislative Council.—The Legislative Council consists of 24 members who are appointed for life by the Lieutenant-Governor in Council. A legislative councillor must be at least 30 years of age, must be a British subject resident within the province and must own unincumbered property of the minimum value of \$4,000 situated within the division represented. Besides the right of approving or rejecting Bills adopted by the Legislative Assembly, the legislative councillors may propose, discuss and adopt measures which do not affect the public revenues. Such legislation must be ratified by the Legislative Assembly. For the purposes of the Legislative Council, the province is divided into 24 constituencies. Nova Scotia is the only other province of Canada with bicameral parliamentary representation.

Legislative Assembly.—The Legislative Assembly is at present composed of 81 members elected by 82 counties, the counties of Charlevoix and Saguenay being represented by a single member. To be eligible for membership one must be at least 21 years of age, a British subject and free from any legal incapacity. A Legislature may only last for five years without re-election. Every year the members must be convened in session by the Lieutenant-Governor in Council for the despatch of public business, for voting the necessary appropriations to all branches of the public service and for the amendment of existing

QUEBEC.

laws and the enactment of new ones. The Assembly alone has the power of dismissing a ministry which has ceased to represent the views of the majority of the people and also alone has the right to introduce bills as to the raising or employment of the public revenues. The Assembly is presided over by one of its members called the Speaker, who retains office until dissolution of the House that elected him. He does not vote, except by a casting vote in cases where the votes on both sides are equal in number.

Municipal Organization.—Under the French régime the municipal system was almost unknown. It was the same under the English régime until 1840 when at the union of the provinces municipal authorities were first established in Lower Canada. Before this date the province of Quebec had nothing which could be called an organization of local authorities. The maintenance of the roads was regulated by an old statute of 1796, which was administered in the name of the Governor by a Chief Road Inspector (*Grand Voyer*). This arrangement, imperfect as it was, sufficed until the increase of the population and the progress of commerce and industry made it obsolete.

It was Lord Sydenham's Special Council of 1840 that endowed Lower Canada with its first municipal organization. This measure, however, was only partially applied, because the French-Canadians, disturbed by the troubles of 1837–38, suspected a trap on the part of England. To reassure the French-Canadians and to make them understand the necessity for good municipal organization a fellow countryman was needed who spoke their language and held their faith. This man was A. N. Morin, father of the Municipalities Act of 1845. Amended in 1847 and in 1855, this Act was finally replaced by that of 1860. Since 1867 the municipal law has been promulgated by the provincial legislatures, and in 1870 the Quebec Legislature enacted the "Municipal Code of the Province of Quebec."

At present the province of Quebec possesses an excellent municipal organization; it is subdivided into several hundred county, township, parish, village, town and city municipalities. According to M. Lareau: "These are so many small governments which assure independence to the people; initiate them into the duties of public administration and train them better to understand the more complicated mechanism of a general administration." Under municipal organization, the citizens themselves choose and appoint those who shall watch over their special interests.

Municipalities.—A municipality is a territory circumscribed by law, whose inhabitants constitute a corporation, that is to say, a body politic or legal person, charged with the duty of administering the affairs of common interest to the inhabitants of a municipality. There are two kinds of municipalities: local and county. Local municipalities¹ consist either of a parish, a part of a parish, a township, a part of a township, a village, a town or a city. The county municipality consists

¹ Local municipalities in Quebec correspond to the communes in France.

LOCAL GOVERNMENT OF CANADA.

of all the local municipalities of a county. Each municipal corporation is represented and administered by a board called the municipal council.

Local Municipalities.—These are constituted in the manner and according to the rules laid down by the municipal code; they are divided into two classes: rural or country municipalities and town and village municipalities. The former are subdivided into parish, part parish, township, part township, etc., municipalities. The municipal council is the organ of the local corporation. It consists of seven councillors chosen by the electors of the municipality, or appointed by the Lieutenant-Governor-in-Council when the electors fail to elect within the limits of time prescribed by the law. The town or city municipal council consists of a certain number of aldermen elected by property owners and of a certain number of councillors elected by property owners and tenants. The council of a local municipality is presided over by a mayor elected by the members, or in default of election appointed by the Lieutenant-Governor-in-Council. He presides at meetings of the council, watches over the interests of the municipality and maintains order and peace within its boundaries. The power conferred upon the municipal corporations are extensive; they are defined by law and apply generally to all questions of purely local interest. They relate especially to roads, waterways, health, regulation of the sale of alcoholic beverages, maintenance of peace and order, imposition of trading licenses, etc. To meet the cost of administration the municipal council has the right to collect by direct taxation of the taxable property of the locality, or by trading licenses, etc., all necessary sums of money within the limits of its powers. These levies are known as the municipal tax. The municipal taxes are levied on real property according to its value as inscribed on the valuation roll and on a list prepared by the Secretary-Treasurer and called the collection roll.

County Municipalities.—The county is a part of the territory of the province containing a certain number of municipalities. The inhabitants of each county constitute a county corporation, and this corporation is represented by a council composed of the mayors of all the local municipalities of the county. The county council is presided over by one of its members elected annually at the March meeting and called a prefect; in default of such election the prefect is appointed by the Lieutenant-Governor-in-Council. The place where the county council meets is called the capital of the county, and is fixed by the council itself. This council deals with all interparochial matters, that is to say, those which are common to more than one parish or local municipality. It has jurisdiction over roads and waterways running through two or more parishes, which are then county roads and waterways. The county council exercises all the powers conferred upon it by law and administers all the county business. It fixes the place where the circuit court is to sit, acts as a court of appeal from the decisions of the local councils and provides for the building of a Registry Office, which is a public office established by the provincial government for the registration in special books of deeds affecting real property, such as deeds of sale, contracts of marriage, wills and deeds of gift *inter vivos*.

ONTARIO.

By ERNEST H. GODFREY, F.S.S., Editor, Census and Statistics Office, Ottawa.

Historical.—In 1763 Canada, with all its dependencies, passed from French to British rule by the Treaty of Paris, signed on February 10 of that year. From this date to 1774 the country was under military rule. In 1774 the "Quebec Act" of the Imperial Parliament (14 Geo. III, c. 83) gave French-Canadians the free exercise of the Roman Catholic religion, the enjoyment of their civil rights and the protection of their own civil laws and customs. The

Act annexed large territories to the province of Quebec, and provided for the appointment by the Crown of a Legislative Council and for the administration of the criminal law as in England. In 1791 the country then called Canada was divided by Act of the Imperial Parliament (31 Geo. III, c. 31) into Upper Canada (now Ontario) and Lower Canada (now Quebec), and the Act established a constitution for each, with a Legislature consisting of a Legislative Council and a Legislative Assembly. In 1841, following Lord Durham's report, the provinces were reunited under the name of the province of Canada by an Imperial Act (3-4 Vict., c. 35), which established responsible government. The Legislature under this Act consisted of a Legislative Council of 40 members appointed for life by the Crown and a Legislative Assembly of 84 members elected by the people. Subsequently (1853) the members of the Legislative Assembly were increased in number to 130 and (1856) the Legislative Council became an elected chamber.

Present Constitution.—Under the British North America Act, 1867, and other legislation, the government of the province of Ontario is vested in a Legislature consisting of a Lieutenant-Governor appointed by the Governor-General of the Dominion, and of one House styled the Legislative Assembly of Ontario, consisting in 1916 of 111 members. The Assembly is elected for four years on a manhood suffrage, and members receive statutory indemnities and an allowance for travelling expenses on a mileage basis. The Lieutenant-Governor is advised by an Executive Council of ten members, now consisting of the President and Premier, the Attorney-General, the Treasurer of the province, the Secretary and Registrar of the province, the Ministers of Education, Public Works, Lands, Forests and Mines and two members without portfolio. The powers of the Ontario Legislature are defined under Sections 92 and 93 of the British North America Act, 1867.¹

Municipal Organization.—Municipal Government in Ontario traces its origin to the recommendations in the report of Lord Durham (1839), and the District Councils Act of 1841 was the first measure of local self-government in the province. A more comprehensive measure known as the Municipal Act of 1849 provided for the incorporation of local municipalities. In 1868, when the Ontario Legislature met for

¹See Canada Year Book, 1914, page 12.

LOCAL GOVERNMENT OF CANADA.

the first time after Confederation, the municipal corporations of the province comprised 36 counties, 399 townships, and 104 cities, towns and villages. The law respecting municipal institutions in Ontario was revised in 1913 by the Municipal Act (3-4 Geo. V, c. 43), and is included in the Revised Statutes of Ontario 1914 as chapter 192. It has been further amended by Acts of 1914 (4 Geo. V, c. 33), 1915 (5 Geo. V, c. 34) and 1916 (6 Geo. V, c. 39). Under these Acts the local municipalities of the province consist of townships, villages, towns, counties and cities. The townships consist of an area varying in extent from six to ten miles square.

The territorial division of the province for municipal and judicial purposes is governed by the Territorial Division Act (R. S. O., 1914, c. 3), and section 11 of this Act provides that, subject to the provisions of the Municipal Act, the Lieutenant-Governor may by proclamation constitute new townships in those parts of Ontario in which townships have not been constituted and may fix the boundaries thereof.

Townships and Villages.—The procedure for the erection of townships is laid down in the Municipal Act. Where found convenient two or more townships may unite for municipal purposes and become incorporated as a Union of Townships. Each township is governed by a chief executive officer styled reeve, and four other members who may be either deputy reeves or councillors, according to the number of deputy reeves to which a municipality may be entitled. This is determined by the number of municipal electors. Where a township has more than 1,000 and not more than 2,000 municipal electors, it becomes entitled to a first deputy-reeve, where it has more than 2,000 and not more than 3,000 to a first and a second deputy-reeve, and where it has more than 3,000 to a first, a second and a third deputy-reeve. These provisions apply also to incorporated villages and towns. The council of a township in "unorganized territory," that is to say, any part of the province which is not organized by counties, consists of a reeve and four councillors. New villages may be incorporated by the county council out of districts or parts of townships under conditions laid down by the Act as to area, population and other matters. Provision is also made for the constitution of police villages by the county council on the petition of freeholders and tenants in localities having a population of not less than 150 and an area of not more than 500 acres. Police villages are administered by three trustees whose powers and duties are defined by the Act. The trustees of a police village may be created a body corporate where the population is not less than 500.

Towns.—New towns may be incorporated under conditions prescribed by the Ontario Railway and Municipal Board, which was constituted in 1906 under the Ontario Railway and Municipal Board Act (R. S. O., 1914, c. 186); their governing bodies are differently constituted from those of the smaller municipalities. In unorganized territories the town council is composed of a mayor and six councillors elected by general vote. Towns with a population of not less than 5,000 may be composed of a mayor and nine councillors. Towns in counties having a population of more than 5,000 are composed of a

ONTARIO.

mayor, a reeve, as many deputy-reeves as they may be entitled to under the provision previously quoted, and two or sometimes three councillors for each ward into which the town may be divided. Cities and certain towns are for municipal purposes separated from the county. The number of these separated municipalities is 30 according to the latest report on municipal statistics of the Ontario Bureau of Industries. They include the municipalities of Toronto, Ottawa, Hamilton, London, Brantford, Kingston, Peterborough, Windsor, Fort William, Berlin, Guelph, St. Thomas, Stratford, St. Catharines, Chatham, Galt, Sarnia, Belleville, Brockville, Woodstock, Niagara Falls and Smith's Falls.

Counties.—The members of the county councils are not elected directly by the municipal voters, but each council is composed of the reeves and deputy-reeves of the towns (other than the "separated towns") and of the villages and townships. The head or presiding officer of the county council is styled warden and is its chief executive officer. In general, the county council has charge of various matters which are common to more than one local municipality within the county, including, for instance, the control of highways, bridges, court-houses, gaols, houses of refuge, land registry offices, etc. The county rates are levied and collected through the constituent local municipalities. Provisions for the erection of one description of municipality into another, as for instance a village into a town, are laid down in the Municipal Act, and in this connection, for municipalities in districts that have not yet a county organization, the Railway and Municipal Board, has certain organizing and controlling powers. There are at present 38 county corporations. Four of these are composed of a union of counties, viz. (1) Leeds and Grenville, (2) Northumberland and Durham, (3) Prescott and Russell and (4) Stormont, Dundas and Glengarry.

Cities.—Cities are governed by councils composed of a mayor, the members of the board of control, if such a board exists, and two or three representatives of each ward who are styled aldermen. A special feature of city government is that by which much of the business of the city, and especially business of a financial character, is delegated to a board of control. The Municipal Act provides that the council of any city having a population of less than 100,000 but more than 45,000 may by by-law provide for the election by general vote of four controllers who with the mayor constitute a board of control. By the Municipal Amendment Act, 1915 (5 Geo. V, c. 34), this provision is made obligatory in all cities of Ontario having a population of not less than 100,000 and not more than 200,000. Power is granted to the council to pay salaries to the members of the board not exceeding for each member \$1,500 per annum. The duties of the board include the preparation of estimates, the awarding of contracts, the inspection of municipal works, the nomination of officers and their dismissal or suspension. The board reports to the council, and its action is subject to their approval or reversal; but the council may not make appropriations or expenditures of any sums not provided for by estimates of the board without a two-thirds vote, which is defined as the affirmative vote of two-thirds of the members present. Boards of control have been established in Toronto, Ottawa, Hamilton and London.

LOCAL GOVERNMENT OF CANADA.

Submission of By-laws to the Electors.—Another characteristic feature of municipal government in Ontario is the arrangements for direct reference to the electors of important questions and of certain descriptions of by-laws. The regulations governing the procedure for ascertaining the opinion or obtaining the assent of the municipal electorate are prescribed by the Municipal Act. Certain classes of these by-laws involving financial appropriations are only referred to specific classes of the electors such as property owners. The results of the voting on the questions submitted in this way are, however, only for the guidance of the governing body of the municipality and do not bind it to any course of action, except in the case of money by-laws, where the decision of the electorate must be followed. All the municipalities are empowered to pass by-laws to provide for the granting of bonuses in aid of manufactures and railways, and these bonuses may take the form of money grants, guarantees, total or partial exemptions from municipal taxation or the granting of certain other facilities to secure the object desired.

Judicial System.—The supreme court of Ontario consists of (a) the appellate division and (b) the high court division. The appellate division is composed of not less than two divisional courts, each consisting of five judges, who try appeals from the high court and other courts of the province. Appeals from this court to the supreme court of Canada may be made in certain cases. Sittings of the high court division are held by single judges, with or without juries, at least twice a year in each county. The court has jurisdiction in virtually every kind of case. In each county or district there is a court presided over by a judge, who sits at least twice a year, with or without a jury, to try minor civil actions. Each county judge also presides at least twice yearly over a court of general session, with a limited jurisdiction in criminal matters. Criminals may also, with their own consent, be tried by the county judge without a jury. Each judicial district is divided into court divisions in each of which a division court is held by the county judge, or his deputy, at least once in every two months. These courts are for the recovery of small debts and damages. The county judges hold revision courts for the revision of assessment rolls and of voters' lists; they are also judges of the surrogate courts, which deal with the estates of deceased persons.

HISTORICAL SKETCH.

Establishment of Provinces.—On the prairies there have been two distinct trends of historical and political development—that of the Red River and that of the Territories. The whole region was originally under the sway of the Honourable Company of Adventurers trading into Hudson's Bay. In the case of the Red River, responsible self-rule came with the transfer to Canada. The Territories possessed absolutely no form of government prior to their incorporation in the Dominion.

MANITOBA.

ON September 4, 1812, Captain Miles Macdonell, in the name of Lord Selkirk, took formal possession of the District of Assiniboia at the forks of the Red and Assiniboine Rivers. This was the first act of government in what is now Western Canada.

The deed of the District of Assiniboia to Selkirk reserved to the Company "all rights of jurisdiction." For this reason the Company's commission was given to the governor appointed by Selkirk. The governor could act as judge. But to do this correctly, he must act with his

Council. A Council of Assiniboia was appointed to safeguard the judicial functions of the governor. It was not so much a Council of Assiniboia as the Council of the Governor in Assiniboia, not so much a legislative or administrative body as a judicial tribunal. From the time of Governors Bulger and Pelly the Council began to assume administrative and legislative functions. It began also to divest itself of judicial functions. In the former it was entirely successful; in the latter, only partly so. The minutes of the Council of May 4, 1832, show the Council launched upon its career of legislative activity. It adopts regulations concerning pigs and stallions allowed to range at large, fires, statute labour for the improvement of roads and bridges, public fairs and the taking of horses from their grazing grounds.

The Council never was in any degree responsible to those whose interest it was expected to regard and foster. But its membership was largely representative of the leaders in the community. It enacted a great variety of measures that sought to promote the public welfare in relation to fires, animals, horse taking, hay, roads, intoxicating of Indians, liquor laws, customs duties, police, debtors, intestate estates, marriage licenses, contracts for service, surveyors, postal facilities, premium on wolves, administration of justice and other matters of general concern. On June 25, 1841, was formed the Municipal District of Assiniboia which extended in all directions fifty miles from the forks of the Red and Assiniboine Rivers. To carry out its resolutions the Council of Assiniboia organized a board of works, a committee of economy, a volunteer corps, legal and judicial machinery, a tariff system and postal facilities. It appointed public officials and erected the necessary buildings. It supervised the whole social life of the settlement, imposing duties and restrictions on the sale and importation of liquors, superintending the building of roads, the issue of marriage licenses and the encouragement of native industries.

The little community at the forks of the Red River knew nothing of self-government. The suffrage was unknown though every proprietor of land was held qualified and liable to act as juror. But the desire for self-rule at last found expression and not in the District of Assiniboia alone. In the settlement of Portage la Prairie the inhabitants actually established a provisional republic. Though the Council of Assiniboia governed, it gave no security. The presence of the Sioux revealed the

LOCAL GOVERNMENT OF CANADA.

helplessness of the colony in a time of real danger. In the settlement was formed a Canada party. In Great Britain the renewal of the Company's charter upon former lines was found to be impossible. The confederation of the Canadian provinces showed in what direction lay the solution of many difficulties.

The series of Dominion Acts relating to the West begins with "An Act for the temporary government of Rupert's Land and the Northwestern Territory when united with Canada," June 22, 1869. This Act sought to prepare for the transfer of the Territories from the local authorities to the government of Canada. A year later the Manitoba Act (33 Vict., C. 3) launched upon its independent constitutional career the old District of Assiniboia, now in possession of complete self-government. The interval between these Acts had seen the troublous days of the Red River disturbances, and more than one attempt to set up a government had been made. The provisional governments of the period are due to the failure to appreciate local problems. The Lieutenant-Governor in the first days of the province naturally occupied a very important position in the administration of affairs. For a short time there was a temporary government with two ministers and the Legislative Assembly. After this, government was carried on with the Legislative Assembly and a Legislative Council, but without a premier. At the end of six years the Legislative Council was abolished. Without a Legislative Council but with a Premier and a Legislative Assembly the province assumed the constitutional form which has endured to the present day.

SASKATCHEWAN AND ALBERTA.

The landmarks in the growth of provincial institutions for Manitoba are the coming of the Selkirk colonists, the development of the Council of Assiniboia, the passing of the Hudson's Bay Company as a governmental body, the enactment of the Manitoba Act and the abolition of the Legislative Council. The chief stages in the political development of the Northwest Territories (that portion of Rupert's Land and the Northwestern Territory not included in the province of Manitoba) are indicated by the capitals, Fort Garry, Swan River, Battleford

and Regina. When the Government was at Fort Garry the Territories were administered by officials resident in a neighbouring province. In Livingstone, Swan River, the Lieutenant-Governor and councillors belonged for the first time to the Territories exclusively. Battleford marked the beginnings but only the beginnings of self-government. It was reserved to Regina to witness the evolution from the Northwest Council to the Legislative Assembly, from representative to responsible government, from territories to provinces.

The Territories were not at first given a separate government.

SASKATCHEWAN AND ALBERTA.

They were administered from Fort Garry by the Lieutenant-Governor of Manitoba with the aid, first of a small executive council of three, irregularly appointed, the Hon. Mr. Justice Johnson, the Hon. D. A. Smith and the Hon. Pascal Breland, and then with the aid of a more formal and more regularly appointed but still admittedly provisional Northwest Council. This council addressed itself to the task of laying the foundations of territorial administration. It did much, also, to secure the goodwill of the Indian tribes.

The charter of the separate political existence of the Territories is the Northwest Territories Act, 1875. It was under this Act that the late Hon. David Laird was appointed Lieutenant-Governor. He held a legislative session under the Act of 1875 at Livingstone, Swan River, in 1877. Battleford was the capital for three sessions of the council. The construction of the Canadian Pacific Railway transferred the seat of government to the line of railway, designated at first Leopold, and then Regina. Settlement ceased to follow the course of the rivers. Trade routes for freighters now began to run north and south from the railway. The old Northwest passed away.

At the same time a profound change was being effected in the constitutional character of the Territories. While the capital was still at Battleford, in 1881, Chief Factor Lawrence Clarke was elected to represent the district of Lorne. This constituted the first opportunity given the settlers themselves to express their sentiments in the administration of affairs. Three years later the elected representatives of the people became numerous enough to exert an influence upon legislation. The years that ensued were wonderfully formative. In 1884 the Northwest Council laid the foundations of the territorial school and municipal systems. The crushing of the half-breed uprising in 1885 assured the dominance of the white settlers and permanently banished the spectre of Indian disorders. A year later was established a territorial judiciary. Then followed a parliamentary struggle for the control of the purse. In quick succession came the Advisory Council, the Executive Committee, the Executive Council. In this contest between representatives of the settlers and the Dominion officials victory lay with the people and with the cause of popular government. It was not, however, till 1897, on the eve of a remarkable growth in population and economic development, that the government of the Territories, which for half a decade had been giving expression to the people's will, was made completely responsible in form as it had already been in fact.

The increased volume of immigration necessitated heavier expenditures upon education, public works and local administration. It was impossible to introduce municipal organizations into many districts outside the limits of the denser settlements. The result was to impose upon the Territorial Government excessive burdens. Financial embarrassments gave rise to constitutional aspirations. Finally, after a prolonged agitation, the Saskatchewan and Alberta Acts provided for the erection on September 1st, 1905, of two provinces, Saskatchewan and Alberta.

LOCAL GOVERNMENT OF CANADA.

Growth of Municipal Institutions. Manitoba.—The stages in the growth of municipal institutions for the province of Manitoba are marked by the legislation of the years 1871, 1873, 1882 and 1902. In 1871 the County Assessment Act and the Parish Assessment Act made provision for dealing with local finance. The former concerned the tax roll of the province; the latter, purely local improvements and assessments for the parishes within each of the five counties. An Act of 1873 provided for the erection of a local municipality in districts containing not less than 30 freeholders. In 1883 the province was divided into 26 counties and three judicial districts. This Act copied closely the Ontario Act of 1849. In the working out of the Act it was found to be in many particulars unsuited to prairie conditions. By the General Municipal Act of 1902 every city, town, village and rural municipality became a body corporate. Over all is the general supervision of a Department of Municipal Affairs.

Northwest Territories (Saskatchewan and Alberta).—As early as 1884 we find among the Ordinances of the Northwest Territories one "respecting Municipalities." This contained provisions for the establishment of certain rural municipalities and the municipalities of the town of Regina, the town of Moosejaw, etc. Only a limited number of rural municipalities found practical existence under this Ordinance, which was planned on principles similar to those of the older provinces. In 1896 legislation was passed deorganizing certain of the rural municipalities where the system proved unpopular. In 1897 the Legislature of the Territories passed a Statute Labour Ordinance. The year following produced the Local Improvement Ordinance which, with its amendments, was the law observed until 1904. The average area of each local improvement district was one township. In 1903 a new Local Improvement Bill deorganized all one-township local improvement districts and abolished the provision for statute labour. The new Bill provided for local improvement districts with an area of four townships, each of which was a division electing a council annually. The four thus secured formed a Council Board. In 1904 the Legislature made financial provision for inquiry into municipal organizations in general in order to provide a safe, economical system of rural municipalities and to improve the ordinance under which cities, towns and villages were administered. The breaking up of the Territories in 1905 into the present provinces of Alberta and Saskatchewan caused delays; but municipal commissions with urban and rural sections were appointed. As a result of the experience gathered during territorial days and later, and of the findings of these Commissions, Local Improvement Acts were amended, Rural Municipality, Town and Village Acts were passed in both provinces, and a City Act was passed in the province of Saskatchewan.

SASKATCHEWAN AND ALBERTA.

ORGANIZATION OF PRAIRIE PROVINCES.

Representation of Provinces in the Dominion Parliament.—The representation of the prairie provinces is determined by the British North America Act, which provides for readjustment after each census, and by the various acts establishing the provinces themselves. The following schedule indicates the present representation and that which will obtain upon dissolution of the present Parliament:

Province.	Senators.	Members of House of Commons.	
		At Present.	In Future.
Manitoba.....	4	10	15
Saskatchewan.....	4	10	16
Alberta.....	4	7	12

Provincial Constitutions.—The Constitutions of the prairie provinces are determined by the following Acts and their amendments: the British North America Act, the Manitoba Act, the Saskatchewan Act and the Alberta Act.

Executive Power.—Each province has a Lieutenant-Governor, appointed by the Dominion Government, who holds office for five years. Within his term he is not removable except for cause assigned, communicated to him in writing. His powers are exercised in accordance with the principles of responsible government, with the advice and consent of the provincial cabinets.

Each province has in its cabinet a Minister of Public Works, an Attorney-General, a Minister of Agriculture, a Provincial Treasurer, a Minister of Education and a Provincial Secretary. A feature peculiar to the prairie provinces is the Department of Municipal Affairs under the supervision of a Minister in Saskatchewan and Alberta, of a Commissioner in Manitoba. More than one department or sub-department is frequently under one responsible minister. Thus at present in Manitoba the premier is President of the Council, Provincial Land Commissioner and Railway Commissioner; the Minister of Agriculture is also Minister of Immigration; the Provincial Secretary is also Municipal Commissioner. In Saskatchewan the premier is

LOCAL GOVERNMENT OF CANADA.

President of the Council and Minister of Education; the Provincial Treasurer is also Minister of Telegraphs and Telephones; the Attorney-General is also Provincial Secretary; and the Minister of Railways has in charge the administration of highways. In Alberta the premier is also Minister of Railways and Telephones, but each minister has in charge a single department.

Legislative Power.—Each province has a Legislature consisting of the Lieutenant-Governor and the Legislative Assembly. There must be a yearly session. Though the Assembly may be dissolved at any time it must not continue longer than a fixed period of years after a general election. Section 92 of the British North America Act enumerates the exclusive powers of the Provincial Legislatures.¹

Municipal Government.—The school district constitutes at once the most important and elementary unit of self-government on the prairies. Of municipal organization there are five different forms: (a) Local Improvement Districts; (b) Rural Municipalities; (c) Villages; (d) Towns; (e) Cities.

*Local Improvement Districts.*²—These consist of those sparsely settled areas where there exists either no municipal organization whatever or organization of a very simplified and elementary character. As a rule, each local improvement district has exactly the same area as the rural municipality into which it may subsequently be transformed. This is generally the territorial unit of 18 miles square or nine townships. The form and size of these units occasionally vary to fit into the physical features of the country. The local improvement district is not regarded as a permanent organization. Its powers are circumscribed. In Saskatchewan the local improvement and supplementary revenue taxes are collected by the Department of Municipal Affairs and spent for public works through the Board of Highway Commissioners. A certain portion of them is disbursed for wolf bounties. In Alberta a council is elected, a councillor from each of the six wards or divisions. The power of this council is very limited. It has the right to levy a small tax, at a rate fixed at so many cents, never exceeding five, on the acre. It can expend the revenue so raised in payment for work on roads and bridges, a little assistance to agriculture and the running expenses of the district.

Rural Municipalities.—The rural municipality is a permanent institution and a body corporate. It passes by-laws for the general welfare of the community. These relate to such matters as public health, nuisance grounds, cemeteries, hospitals, granting aid to the sick and worthy indigent, providing for tree planting in public places, imposing fines for light weight and short measurements, preventing cruelty to animals, restraining the running at large of dogs, the application of herd and pound laws, preventing prairie fires, licensing hawkers

¹See Canada Year Book, 1914, page 12.

²In Manitoba this term is used to denote a portion of a rural municipality or incorporated village formed into a particular territory to provide for local improvements.

SASKATCHEWAN AND ALBERTA.

and pedlars, regulating speed on highways, granting aid to agricultural societies, the destruction of noxious weeds, the acquiring of land for public purposes, the erection of municipal buildings and similar matters. They have charge of the collection of school taxes in rural districts within the limits of the municipality. In order to perform permanent improvements a rural municipality can borrow by debentures.

The rural municipalities have authority to collect certain license fees, but taxation constitutes their principal source of revenue. Each council appoints its own auditor, but the books of the municipality are subject to departmental inspection. Under conditions that vary with the provinces the electors of the municipalities may vote to come into provincial, group or co-operative hail insurance schemes. They are not allowed to bonus railways or commercial enterprises of any kind. The method of election varies with the provinces. In Alberta, for instance, the council is elected at large by the electors of the municipality, and the reeve is chosen at the first meeting of the council; in Saskatchewan the reeve only is elected at large and each of the six councillors is chosen by a division of a township and a half; in Manitoba the Council consists of the reeve and six or four councillors as determined by by-law. A secretary-treasurer appointed by the council levies the assessment and collects the taxes.

Villages.—In Saskatchewan 100 people must be actually resident in a hamlet before it can claim village incorporation. The number is counted by a person sent from the Department of Municipal Affairs. Each village may levy, for taxation purposes, on land at its fair actual value, and on buildings and improvements at 60 p. c. of their value, but if two-thirds of the resident ratepayers desire, by written petition, that the assessment shall be based on land values only, the council may pass a by-law to that effect.

Under the Village Act of Alberta a village is not a corporate body and has only very limited powers. A village may be established where there is any centre of population containing 25 occupied dwelling-houses within an area not greater than 640 acres. The tax, which may not exceed 2 cents on the dollar, must be levied on the actual value of the lands in the village exclusive of the improvements thereon. A village may borrow money by debentures after obtaining authority from the Minister of Municipal Affairs.

In Manitoba, villages, as in the case of towns and cities, excepting Winnipeg and St. Boniface, are incorporated under the Municipality Act. A village must have 500 inhabitants within 640 acres. The census is taken under the direction of the council of the municipality. The council consists of the mayor and four councillors. The village council, as in the case of the council of every municipality in Manitoba, may pass by-laws for exempting any industry in whole or in part from taxation for any period not exceeding 20 years.

Towns.—In Saskatchewan a village must have at least 500 people actually resident therein, in order to become a town. The census must be taken by an official of the Department. Land is assessed at its fair actual value and improvements at not more than 60 p. c. of their

LOCAL GOVERNMENT OF CANADA.

value, but this assessment on the latter may be withdrawn entirely within not less than four years. Power has been given to establish parks and recreation grounds, skating and curling rinks.

In Alberta a village having 700 residents may be established as a town. The Act requires that all taxes must be derived from an assessment levied according to the actual cash value of the land without regard to any improvements made thereon by the expenditure of capital or labour. Income, personal property and improvements are entirely exempt from taxation.

In Manitoba a locality containing over 1,500 inhabitants may be erected into a town on petition. The council consists of the mayor and two councillors for every ward.

Cities.—In Alberta there is no City Act. The different cities in the province carry on business under their own special charter. Accordingly the methods differ in the different cities. Where in other provinces common regulations exist here can only be observed tendencies. They are strongly inclined to own their own utilities, not to give franchises and to exempt personal property, incomes and improvements from taxation.

In Saskatchewan towns must have a population of 5,000 to become cities. A general City Act governs in each case. This strictly prohibits the granting of bonuses. A Saskatchewan city may at its own volition assess land values exempting buildings and improvements, but the change may be gradual. Land is assessed at its fair actual value and buildings at not more than 60 p.c. of their value. This 60 p.c., however, may be entirely eliminated by a gradual reduction of not more than 15 p.c. in any one year.

The three provinces of the prairies have each a different method in regard to the appointment of city commissioners. In Manitoba is found the board of control, in Saskatchewan the appointed commissioner, in Alberta the elected commissioner.

In Manitoba, towns containing over 10,000 inhabitants may be erected into a city. The council consists of the mayor and two aldermen from every ward.

In all three provinces, cities, towns, villages and rural municipalities may pass by-laws for contracting debts by borrowing money or otherwise, and, if necessary, for issuing debentures for certain specified purposes, but in all cases the by-laws for borrowing money must receive the assent of the electors. Particularly in connection with the smaller types of corporation the limit of debt is specifically stated in the various acts governing the cases.

The legislative powers of the councils of municipalities in the three prairie provinces are in the main the same,—acquiring property for municipal or public purposes, taking census, appointing engineers, constables and other officers, enforcement of by-laws, regulations regarding public health and comfort, public safety, public order and morality, protection from fire, care of children, regulation of streets and public places, drainage and sewerage, fences, dairies, water supply,

BRITISH COLUMBIA.

matters relating to agriculture, public fairs, animals, dog taxes, impounding, cemeteries, coal and wood supply, libraries, advertising, markets, boards of trade, trades and occupations, licensing travellers for commercial houses, street numbering and similar matters.

BRITISH COLUMBIA.

By S. D. SCOTT, Vancouver, B.C.

B RITISH Columbia became part of the Dominion of Canada on July 20, 1871. The province had been organized in 1866 by the union of the colony of Vancouver Island, whose government had been established in 1849, with that of British Columbia (the mainland) which dated from 1858. About the time that British Columbia entered the Confederation, local responsible government began. Previously, the colony had been administered by a governor and a mixed elective and appointed council.

The administration is vested in a lieutenant-governor and a cabinet of eight members as follows: Attorney-General and Commissioner of Fisheries; Minister of Finance; Provincial Secretary and Minister of Education; Minister of Lands; Minister of Mines; Minister of Public Works; Minister of Agriculture; President of the Council. With the exception of the Premier, who holds one of these offices and receives \$3,000 a year in addition to the salary of his portfolio, and the President of the Council, who is unpaid, the salary of each of these ministers is \$6,000. The first administration after Confederation contained only five ministers. The Department of Mines was separated from other portfolios, with a minister of its own, in 1900. The Department of Public Works was separated from that of Lands in 1908. In 1916, Agriculture, previously under the jurisdiction of the Minister of Finance, became a department with a minister of its own.

Legislative.—British Columbia has a single chamber legislature of 47 members, increased by Act of 1915 from 42. The number of members after Confederation was 25. But as new settlements arose and others grew into cities and towns redistribution took place from time to time. For example, Vancouver city, now represented by six members, first became a constituency in 1894 with two members. In the Legislature elected in 1916, Vancouver had six representatives, Victoria four, all elected at large, while the other 37 ridings returned single members. The term of the Legislature from Confederation until 1916 was four years. The thirteenth Legislature (1912–16) made the term five years, the change to go into effect the succeeding term. The sessional indemnity is \$1,600, and an allowance of \$1,500 is made to the leader of the Opposition.

LOCAL GOVERNMENT OF CANADA.

Judicial.—Justice is administered in British Columbia by a court of appeal, composed of a chief justice and four puisne judges; a supreme court, comprising a chief justice and five puisne judges; and ten local county courts, each with one judge, except that of Vancouver, which has three. There are also minor courts with criminal jurisdiction held by stipendiary magistrates, police magistrates and justices of the peace and magistrates having civil jurisdiction under the "Small Debts Act." Victoria and Vancouver have juvenile courts.

Police.—In addition to the local police maintained by the municipalities, there is a body of provincial police with general jurisdiction, which maintains order in the unorganized districts, looks after the Indians, renders assistance to local authorities in the pursuit of criminals and performs other services required in a pioneer country. These are directly under the control of the Attorney-General's Department.

Provincial Taxes.—British Columbia imposes direct taxation to a greater extent than any other province, and has received from this source as much as \$1,200,000 in a year. These taxes include a small assessment on improved property outside of incorporated municipalities, an assessment of four p.c. on assessed value on wild land (which tax is intended to encourage improvement and settlement), a progressive income tax, taxes on corporations, succession duties and certain license fees.

Agriculture.—The Department of Agriculture is organized with a minister, a deputy minister and various heads of branches, including live-stock commissioner, provincial horticulturist, instructor in poultry raising, inspector of fruit pests, market commissioner, cold storage commissioner, veterinary inspector, dairy instructor, seed commissioner and plant pathologist.

Farm Credit.—In 1916 an Agricultural Credit Commission was established, with authority to advance money by way of loan to farmers on the security of their holdings, for the purpose of clearing and improving their properties, providing buildings and equipment. This advance is to be repaid in instalments, with interest at a rate sufficient to meet the charge on Government bonds and cost of management.

Lands, Etc.—The Department of Lands is under a minister and deputy minister, a surveyor-general, chief forester, geographer, irrigation supervisors and other officials. It maintains a forest protection service, with a staff of rangers to guard against the destruction of timber by fires. By the co-operation of the lumber interests, this protection includes public and private property. Land has heretofore been sold for agricultural purposes to applicants at prices which have been gradually raised. From time to time areas have been withdrawn and reserved for pre-emption or homesteads. By legislation of 1916, the lands previously sold on deferred payments, on which unpaid amounts remained, reverted to the crown to the extent of the part unpaid for, and are held as homesteads for returned soldiers.

Fisheries.—The administration of the fisheries is under the control of the Finance Department, which, among other things, regulates the fish canneries, the inland fisheries, and, in co-operation with the federal

BRITISH COLUMBIA.

authorities, maintains stations and a staff for the study of the habits of the fish, methods of propagation, preservation and protection.

Education.—The Department of Education is under a minister who is also provincial secretary. The Superintendent of Education has the rank of a deputy minister. Supervision is in the hands of one high school inspector, fourteen inspectors of schools and one inspector of manual training schools. From the university to the primary school, the system is non-sectarian; English is the only recognized language of instruction in the common schools.

The provincial university, authorized by legislation passed in 1908, was organized in 1912 and 1913 by the first convocation, the appointment of the president and the first board of governors. This institution is governed by a chancellor, elected by convocation of alumni, a board of governors, appointed by the Government, and a senate partly elected by the convocation and partly representing the faculty and other teaching bodies. The university has faculties in arts, science, engineering (including mining) and agriculture.

Other educational institutions include two normal schools and over thirty high schools. There are also in the cities night schools in many departments of academic and technical instruction, with manual training and household science departments in the high schools and common schools. Text books are furnished to pupils free of cost.

The maintenance of all the city and town schools, and a large majority of the rural schools, is provided for by district or local assessment, supplemented by grants from the provincial treasury on a per capita basis. Control of these schools is vested in the local authorities subject to general regulations. There are, however, certain rural schools in the more scattered districts which are more directly under the control of the provincial department. The law provides for compulsory attendance at school for children between the ages of seven and fourteen. Cities and organized municipalities elect their school boards by popular vote. These boards appoint municipal inspectors and other officers.

Municipal Government.—For purposes of administration, counties, in the ordinary meaning of the word, are unknown in British Columbia. Local administration is at present based on the legislation known as the Municipal Clauses Act, and supplementary statutes, but municipal government existed in the colony as far back as 1860. Large powers of local self-government are conferred by the existing system. It provides for two classes of municipalities, urban and rural. An urban municipality may be formed by a community of not less than 100 male British subjects, provided the owners of more than half the land petition for it. There are 33 cities, with populations of 600 to over 100,000.

District municipalities may be organized by 30 resident male British subjects of full age. In 1916 there were in the province 28 such municipalities, having from 100 to more than 10,000 ratepayers. The city organizations are of the same general type, though differing in some details. In all, the chief executive officer is the mayor, and all have elective councils.

Neither the commission system nor the board of control has yet been introduced into British Columbia, but the board of control is

LOCAL GOVERNMENT OF CANADA.

authorized by provincial legislation. All the larger cities retain the ward system. Vancouver, which is the largest city, has reduced its council to eight members, one elected by and from each ward. The municipal franchise for ordinary purposes is open to adult male residents and to female householders and real estate owners. Only assessed owners of real estate, male and female, may vote on money by-laws. Such by-laws are necessary for expenditures beyond the ordinary revenue requiring the issue of debentures. They require the majority of three-fifths of the votes cast.

The chief executive of a district municipality is the reeve. In most other respects the district municipality is similar to the city government. In cities the police are under the authority of a commission, composed of the mayor and two members appointed by the provincial Government, one of whom must be chosen from the members of the city council. Under general legislation liquor licenses in cities are controlled by a commission appointed in the same way as a police commission, but special legislation for Vancouver establishes a commission of five, of whom the mayor is one member, and half the others are appointed by the Government and half chosen by the citizens at the annual election.

While the general municipal system is established by common legislation, several municipalities have secured large modifications by special enactment. Each has its own system of assessment and taxation. Vancouver, for example, levies its taxes on real estate values, exempting all improvements, and makes no assessment on personal property or income.

Provincial legislation provides for civic administration of parks. Some cities have an elective board of park commissioners, with control of the public gardens, parks, bathing beaches and open spaces. Some maintain free public libraries, museums and other institutions with public grants.

CHRONOLOGY.

(A more detailed list of events appeared in the Statistical Year Book of Canada for 1904, pp. 4-24.)

- 1497.—June 24, eastern coast of North America discovered by John Cabot.
- 1498.—Second expedition of Cabot. Discovery of Hudson Strait and coast of New England.
- 1534.—Jacques Cartier ascends the St. Lawrence as far as Hochelaga (Montreal).
- 1535.—Second voyage of Cartier.
- 1541.—Third voyage of Cartier.
- 1543.—Fourth voyage of Cartier.
- 1557.—September 1, death of Cartier.
- 1603.—June 22, first arrival of Champlain at Quebec.
- 1608.—Second visit of Champlain, and foundation of Quebec.
- 1615.—Champlain ascends the Ottawa river, passes through Lake Nipissing into the Georgian Bay, and through Lake Simcoe and Rice Lake into Lake Ontario.
- 1627.—Creation of "Company of 100 Associates."
- 1628.—Port Royal (Acadia) taken by Sir David Kirke.
- 1629.—April 24, Treaty of Peace between France and England signed at Susa. July 31, Quebec surrenders to Sir David Kirke. Champlain returns to France.
- 1632.—Treaty of St. Germain-en-Laye; Canada and Acadia restored to France. Champlain returns to Canada as Governor.
- 1634.—Settlement at Three Rivers.
- 1635.—December 25, death of Champlain.
- 1639.—Ursulines and Hospital nuns arrive at Quebec.
- 1640.—Discovery of Lake Erie by Brébeuf and Chaumonot.
- 1642.—Foundation of Montreal.
- 1654.—By Cromwell's orders expedition from New England under Major Robert Sedgwick seizes Acadia.
- 1655.—November 13, Treaty of Westminster, establishing peace between England and France.
- 1659.—Arrival of M. de Laval as Vicar-Apostolic, with title of Bishop of Petreæ *in partibus*.
- 1663.—Dissolution of "Company of 100 Associates." February 5, severe earthquake, lasting several days.
- 1667.—Treaty of Breda; Acadia restored to France. White population of New France, 3,918.
- 1670.—May 13, Hudson's Bay Company receives its charter.
- 1672.—Frontenac appointed Governor. Population, 6,705.
- 1682.—Frontenac recalled.
- 1689.—August 5, Lachine Massacre. Oct. 12, Frontenac, re-appointed Governor, arrives at Quebec.
- 1690.—Massacres by French and Indians on New England frontier. Attack on Quebec by New Englanders under Sir William Phipps repulsed.
- 1697.—September 20, Treaty of Ryswick between France and England, providing for mutual restoration of conquered territories.
- 1698.—November 28, death of Frontenac. Population, 13,355.
- 1699.—M. de Callières appointed Governor.
- 1711.—Naval expedition under Sir Hovenden Walker against Quebec meets disaster.
- 1713.—Treaty of Utrecht gives Acadia to England.
- 1745.—Louisbourg, Cape Breton, taken by English under Sir William Pepperell and Sir Peter Warren.
- 1748.—October 18, Peace of Aix-la-Chapelle restores Louisbourg to France in exchange for Madras.
- 1749.—June 21, Foundation of Halifax by Lord Halifax.
- 1756.—War (Seven Years) between England and France. Montcalm in Quebec.
- 1758.—Representative government granted to Nova Scotia. July 26, capture of Louisbourg by British expedition under Amherst and Boscawen.

CHRONOLOGY.

- 1759.—Capture of Fort Niagara by the English under General Prideaux, who was killed during the assault. July 26, siege of Quebec began. September 13, battle of the Plains of Abraham; death of Wolfe. September 14, death of Montcalm. September 18, surrender of Quebec.
- 1760.—September 8, surrender of Montreal.
- 1763.—February 10, Treaty of Paris signed. Conspiracy of Pontiac.
- 1768.—Sir Guy Carleton (afterwards Lord Dorchester) appointed Governor-General.
- 1774.—Passage of Quebec Act.
- 1775.—May 1, Quebec Act takes effect. American Revolution and invasion of Canada under Montgomery and Arnold. Montreal taken. December 31, attack on Quebec repulsed; death of Montgomery.
- 1776.—Retreat of American forces from Canada.
- 1783.—September 3, Treaty of Versailles, recognizing American Independence and regulating Newfoundland Fisheries. Kingston founded by U.E. Loyalists.
- 1791.—Passage of Constitutional Act by British Parliament; division of Province of Quebec into Upper and Lower Canada.
- 1792.—First Legislatures summoned in Upper and Lower Canada. Vancouver Island circumnavigated by Captain George Vancouver.
- 1793.—Act passed forbidding importation of slaves into Upper Canada.
- 1794.—Jay's Treaty between Great Britain and the United States signed.
- 1811.—Foundation of McGill College. Grant of 74,000,000 acres of land from Hudson's Bay Co. to Earl of Selkirk for establishment of Red River Colony.
- 1812.—June 19, war declared against England by United States. August 16, capture of Detroit by General Brock. October 13, battle of Queenston Heights; death of General Brock.
- 1813.—June 24, memorable action of Laura Secord brings about surrender of American troops at Beaver Dam. September 10, battle of Lake Erie. October 26, battle of Chateauguay. November 11, battle of Chrysler's Farm.
- 1814.—July 25, battle of Lundy's Lane. September 11, battle of Lake Champlain. December 24, Treaty of Ghent makes peace between England and United States.
- 1817.—First Treaty with Northwest Indians.
- 1818.—October 30, London Convention regulating North American Fisheries.
- 1820.—Cape Breton re-annexed to Nova Scotia.
- 1821.—Commencement of Lachine Canal.
- 1829.—Foundation of Upper Canada College. First Welland Canal Opened.
- 1833.—Crossing from Nova Scotia to England of the *Royal William*, the first vessel to cross the Atlantic entirely by steam.
- 1834.—March 1, Incorporation of Toronto.
- 1837.—Outbreak of Rebellion in Upper and Lower Canada.
- 1838.—May 29, Lord Durham arrives at Quebec.
- 1839.—February 11, Report of Lord Durham. October 19, Charles Poulett Thompson (afterwards Lord Sydenham) arrives in Canada.
- 1840.—July 23, passage of Act of Union, July 28, death of Lord Durham.
- 1841.—February 10, Union of Upper and Lower Canada. June 13, the first joint parliament meets at Kingston. September 3, adoption of Baldwin's resolutions respecting responsible government. Population of Upper Canada 455,688; of Lower Canada (1844), 697,084. September 19, death of Lord Sydenham.
- 1842.—August 9.—Ashburton Treaty.
- 1843.—Foundation of Victoria, British Columbia.

CHRONOLOGY.

- 1848.—Opening of Navigation of St. Lawrence Canals.
- 1849.—April 25, rioting in Montreal over passing of Rebellion Losses Bill. Vancouver Island made a Crown Colony.
- 1850.—Clayton-Bulwer Treaty.
- 1851.—Responsible government goes into effect in Prince Edward Island.
- 1852.—Commencement of Grand Trunk Railway.
- 1854.—Abolition of Seigniorial Tenure in Lower Canada; settlement of Clergy Reserves question. June 5, Reciprocity Treaty with United States.
- 1855.—March 16, Reciprocity Treaty with U.S. comes into effect. Incorporation of City of Ottawa.
- 1858.—Adoption of decimal currency. Ottawa selected by Queen Victoria as capital of the province of Canada. Parliamentary government established in British Columbia. April, discovery of gold in British Columbia.
- 1860.—September 1, corner stone of Parliament Buildings at Ottawa laid by the Prince of Wales.
- 1861.—Prince Edward Island Land Commission.
- 1863.—Separate School Act (Canada).
- 1864.—September, Convention at Charlottetown on Union of Maritime Provinces; October 10, adjourned to Quebec to consider Union of all British North American provinces.
- 1865.—February 3, resolution of Legislature for address to Her Majesty praying that act may be passed for the Union of the B.N.A. provinces. October, transfer of seat of government from Quebec to Ottawa.
- 1866.—March 17, termination of Reciprocity Treaty by the United States. May 31, invasion of Canada by Fenians. June 8, the Legislature of Canada meets in new Parliament Buildings at Ottawa. August 11, address to Her Majesty the Queen, embodying resolutions providing for the local governments and legislatures of Lower and Upper Canada, respectively, under proposed Union of B.N.A. provinces. November 17, Union of Vancouver Island with British Columbia.
- 1867.—February 10, passing of British North America Act. July 1, Proclamation of the Union; Dominion Day established.
- 1868.—April 7, assassination at Ottawa of D'Arcy McGee. July 31, Rupert's Land Act.
- 1869.—Red River Rebellion.
- 1870.—May 11, purchase by Dominion of Hudson's Bay Company's rights in Rupert's Land, £300,000. July 15, addition to the Dominion of the Northwest Territories and creation of new province of Manitoba. September 24, arrival at Fort Garry of Col. Wolseley's expedition. Collapse of Rebellion.
- 1871.—May 8, Treaty of Washington. July 20, admission of British Columbia to Confederation.
- 1873.—July 1, admission of Prince Edward Island to Confederation.
- 1875.—A Lieut.-Governor appointed for Rupert's Land and the Northwest Territories.
- 1876.—Opening of the Intercolonial Railway from Quebec to Halifax. Establishment of Royal Military College at Kingston.
- 1877.—First exportation of wheat from Manitoba to Great Britain.
- 1878.—November, arrival of Marquis of Lorne as Governor-General, accompanied by H. R. H. Princess Louise.
- 1879.—Adoption of the "National Policy."
- 1880.—British possessions on the North American continent annexed to Canada. May 11, first High Commissioner for Canada appointed (Sir A. T. Galt). May 10 death of Hon. George Brown.
- 1881.—May 2, first sod turned of Canadian Pacific Railway.
- 1882.—May 8, Provisional Districts of Assiniboia, Saskatchewan, Alberta and Athabasca created.

CHRONOLOGY.

- 1883.—May 30, Sir Charles Tupper appointed High Commissioner for Canada, in London.
- 1884.—August 11, settlement of boundary between Ontario and Manitoba. August 27, British Association meets in Montreal.
- 1885.—March 26, outbreak of second Northwest Rebellion. November 16, execution of Louis Riel.
- 1887.—Jubilee of Queen Victoria. Interprovincial Conference at Quebec. April 4, first Colonial Conference in London.
- 1888.—February 15, signing of Fishery Treaty at Washington. August, rejection of Fishery Treaty by United States Senate.
- 1890.—Legislature of Northwest Territories obtains control of all territorial expenditure. October 6, McKinley Tariff Act came into operation in the United States.
- 1891.—June 6, death of Sir John A. Macdonald.
- 1892.—Treaty of Washington (Behring Sea) providing for arbitration. Boundary Convention signed between Canada and United States.
- 1894.—June 28, Colonial Conference at Ottawa.
- 1895.—Proclamation naming the unnamed portions of the Northwest Territories as Ungava, Franklin, Mackenzie and Yukon Districts.
- 1896.—April 24, Lord Strathcona appointed High Commissioner for Canada. July 6, boundaries of Quebec extended to shores of Hudson Bay. November 24, Behring Sea Commission met at Victoria, B.C.
- 1897.—June 22, Diamond Jubilee of Queen Victoria. Second Colonial Conference in London. July 30, commercial treaties with Belgium and Germany denounced. August 18, British Association meets at Toronto. December 8, Privy Council decision upholding right of Provinces to create Queen's Counsel.
- 1898.—August 1, Preferential Tariff (reduction of 25 p.c. in favour of Great Britain) comes into force. August 23, Joint High Commission meets at Quebec for adjustment of questions between Canada and United States.
- 1899.—October 11, outbreak of the Boer War. October 30, first Canadian contingent for service in South Africa embarks at Quebec. May 23, first celebration of Empire Day.
- 1900.—April 26, great fire in Ottawa and Hull. July 7, British Preferential Tariff reduced to two-thirds of the General Canadian Customs Tariff. *Modus vivendi* between Great Britain and France respecting Newfoundland Fisheries.
- 1901.—January 22, death of Queen Victoria and accession of King Edward VII. September 16, Duke and Duchess of Cornwall arrive at Quebec.
- 1903.—February 11, Alaskan Boundary Treaty ratified by the United States Senate. October 17, Alaskan Boundary settled (in part).
- 1905.—September 1, creation of new provinces of Saskatchewan and Alberta. January 25, change of government in Ontario.
- 1906.—June 24, first census of Northwest Provinces. September 10, Interprovincial Conference at Ottawa.
- 1907.—March 22, Industrial Disputes Investigation Act passed. April 15-May 14, Third Colonial Conference in London. Adjustment of Parliamentary representation in Saskatchewan and Alberta. New Customs Tariff, including introduction of Intermediate Tariff. August 29, collapse of Quebec Bridge. September 19, new Commercial Convention with France signed at Paris. October 17, establishment of trans-Atlantic communication by wireless telegraphy.

CHRONOLOGY.

- 1908.—January 2, establishment of Ottawa Branch of Royal Mint. May 4, ratification of Treaty for demarcation of boundary between Canada and the United States. June 21-23, Bicentenary of Bishop Laval celebrated at Quebec. July 20-31, Quebec Tercentenary Celebrations; visit to Quebec of Prince of Wales, representing the King.
- 1909.—May 19, appointment of Canadian Commission of Conservation. July 28, Conference on Imperial Defence in London. Establishment of International Joint Waterways Commission.
- 1910.—February 1, ratification of Commercial Treaty with France. February 1, International Opium Commission met at Shanghai. May 4, passing of Naval Service Bill. May 6, death of King Edward VII and accession of King George V. June 7, death of Goldwin Smith. September 7, North Atlantic Coast Fisheries Arbitration award of the Hague Tribunal. New trade agreements made with Germany, Belgium, Holland and Italy.
- 1911.—January 21, proposals for reciprocity with United States submitted to the Canadian Parliament. March 21, Duke of Connaught appointed Governor-General of Canada. May 20-June 20, Imperial Conference in London. July 11, disastrous forest fires in Porcupine mining districts. Sept. 21, General Election of Dominion Parliament. October 11, electrical energy generated by Niagara Falls first used in Canada. October 13, the Duke and Duchess of Connaught land at Quebec.
- 1912.—April 15, loss of the steamship *Titanic*. May 15, extension of the boundaries of Quebec, Ontario and Manitoba. June 17, judgment delivered by the Imperial Privy Council on the marriage question raised by the Ne Temere Decree.
- 1913.—April 10, Japanese Treaty Act assented to. June 2, trade agreement with West Indies came into force. July 26, King's Prize at Bisley won by Canadian. September 1-3, visit to Montreal of British Lord Chancellor (Viscount Haldane). October 4, New Customs tariff of United States goes into force.
- 1914.—January 21, death of Lord Strathcona and Mount Royal, aged 94. May 29, loss of the steamship *Empress of Ireland*. August 3, acquisition by Canada of two submarines on the Pacific Coast. War with Germany, August 4; with Austria-Hungary, August 12; and with Turkey, November 5. August 18-22, special war session of Canadian Parliament. October 16, first Canadian contingent of over 33,000 troops land at Plymouth, England. November 1, loss of 4 Canadian midshipmen by sinking of H.M.S. *Cape of Good Hope* in action off the coast of Chile.
- 1915.—February, Canadian First Contingent land in France and proceed to Flanders. April 22, Second Battle of Ypres; gallantry of Canadian troops highly eulogized by F.-M. Sir John French. July 14, Sir Robert Borden attends meeting of the British Cabinet. Oct. 30, Death of Sir Charles Tupper, Bt. Nov. 22, issue of Canadian War Loan of \$50,000,000. Nov. 30, War Loan increased to \$100,000,000.

II.—PHYSICAL CHARACTERISTICS OF CANADA.

GEOGRAPHICAL FEATURES.

General Formation.—On the eastern coast of the North American continent the Appalachian range of mountains gives shape to the eastern coast of the United States and, extending into Canada, forms the Gaspé peninsula and the Maritime Provinces. Around Hudson bay is a V-shaped plateau constituting the Laurentian highland and extending from Labrador down to the St. Lawrence river and thence north-westward to the Arctic ocean. In the west are the Cordillera ranges of the Pacific coast, extending into British Columbia and the Yukon territory. They occupy a large area in Canada, and comprise several parallel ranges. In British Columbia they are over 400 miles in width, and consist of the Coast range along the coast; the Rocky mountains, properly so called, and, between them, the Selkirk, Gold, Cariboo, Cassiar and other ranges. To the north of British Columbia lies the Yukon territory, including a great mountain area drained by the Yukon river and the Klondike valley, famous for its gold. West of the Canadian Yukon lies the United States territory of Alaska. Canada may further be conveniently divided into five sections: (1) the peninsula which in Canada includes Gaspé and the three Maritime provinces; (2) the lowlands of southern Ontario and southern Quebec, with the Great Lakes and the Ottawa and St. Lawrence rivers draining the interior into the Atlantic ocean; (3) the Central plain; (4) the Laurentian highland; (5) the western Cordillera.

Mountains.—In the western Cordillera are found the highest mountain ranges and peaks of Canada. In the Yukon territory and forming part of the St. Elias range, is mount Logan, 19,539 feet, the highest known point in Canada. In the Rocky mountains are many peaks rising to heights of 11,000 or 12,000 feet, and mount Robson, 13,700 feet, in the Yellowhead pass, is the highest of that range. The Selkirk range contains heights of from 9,000 feet to over 11,000 feet.

Waterways.—The waterways of Canada constitute one of the most remarkable of its geographical features. East of the Rocky mountains the southern part of the Dominion slopes northeastward towards Hudson bay; and the rivers in the south flow eastward. Thus the Saskatchewan river, with its northern and southern branches, flows eastward into lake Winnipeg and thence northward by the Nelson river into Hudson bay. On the north the Great Plain has a northerly slope, and the Mackenzie river, with its tributaries, the Slave, Liard, Athabaska and Peace rivers, flows into the Arctic ocean. The Mackenzie, exclusive of its tributaries, but including the Slave, Peace and Finlay rivers, of which it is the continuation, has a total length of 2,525 miles. The Yukon river in the Yukon territory also flows northward, passing through Alaska into Behring strait after a course of 2,300 miles. In British Columbia, the Fraser, Columbia, Skeena and Stikine rivers flow into the Pacific ocean.

Drainage Basins.—The large drainage basins of Canada are the Atlantic (554,000 square miles), the Hudson bay (1,486,000 square miles), the Arctic (1,290,000 square miles), the Pacific (387,300 square miles), and the gulf of Mexico (12,365 square miles). Table 1 gives a list of the river drainage basins, and Table 2 gives the lengths of the principal rivers with their tributaries and sub-tributaries.

NOTE.—In the above table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

St. Lawrence River System.—Most important of the lakes and rivers in Canada is the chain of the Great Lakes with their connecting rivers, the St. Lawrence river and its tributaries. This chain is called the St. Lawrence River System. The Great Lakes, separating the province of Ontario from the United States and connected by a series of artificial canals with the St. Lawrence river, allow of access from the Atlantic ocean to the interior of the Dominion at Fort William and Port Arthur, twin cities situated at the head of lake Superior.

The Great Lakes.—Table 3 shows the length, breadth, areas and elevation above sea-level of each of the Great Lakes.

3.—Area and Elevation of the Great Lakes.

Lake Superior, with its area of 31,800 square miles, is the largest body of fresh water in the world. As the international boundary between Canada and the United States passes through the centre of lakes Superior, Huron, Erie and Ontario, only half of the areas of these lakes given in the above statement is Canadian. The whole of lake Michigan is within United States territory. From the western end of lake Superior to the mouth of the St. Lawrence there is, with the aid of the

GEOGRAPHICAL FEATURES.

canal system, a continuous navigable waterway. The total length of the St. Lawrence river from the head of the St. Louis river to the Pointes-Monts, at the entrance to the gulf of St. Lawrence, is 1,900 miles. The tributaries of the St. Lawrence, several of which have themselves important tributaries, include the Ottawa river, 750 miles long; the St. Maurice river, 400 miles long; and the Saguenay, 100 miles long.

Other Inland Waters.—In addition to the Great Lakes there are large bodies of inland water in other parts of Canada. Of these only the following principal lakes, with their respective areas, need be mentioned here: in Quebec, Lake Mistassini (975 square miles); in Ontario, lake Nipigon (1,730 square miles); in Manitoba, lake Winnipeg (9,457 square miles); lake Winnipegosis (2,086 square miles) and lake Manitoba (1,817 square miles); in Saskatchewan, Reindeer lake (2,437 square miles); in Alberta, lake Athabaska (2,482 square miles). All these are within the boundaries of the provinces as at present constituted, and are exclusive of lakes situated in the Northwest Territories, as, for instance, the Great Bear lake (11,821 square miles) and the Great Slave lake (10,719 square miles) in the Mackenzie District.

Table 4 gives a list of the principal lakes of Canada by provinces, with the area of each in square miles.

PHYSICAL CHARACTERISTICS OF CANADA.

Islands.—The northern and western coasts of Canada are skirted by clusters of islands. Those on the north are mostly within the Arctic circle. On the west, Vancouver and Queen Charlotte Islands are the largest and most important. On the east, besides the separate island colony of Newfoundland, there are the Cape Breton Island, forming part of the province of Nova Scotia, Prince Edward Island, forming one of the nine provinces of Canada, the Magdalen Islands and the island of Anticosti. To the south of Newfoundland are the two small islands of St. Pierre and Miquelon belonging to France. In lake Huron is the island of Manitoulin and the so-called Thirty Thousand Islands of Georgian Bay. In the St. Lawrence river, just below lake Ontario, are the picturesque Thousand Islands.

ECONOMIC GEOLOGY IN CANADA, 1915.

By WYATT MALCOLM, Department of Mines, Ottawa.

The purpose of this article is to call attention to a few of the more important matters arising in Canada during the calendar year 1915 that may be of interest to economic geologists. The limited space at the disposal of the writer is not sufficient for a complete and comprehensive presentation, so attention will be drawn to only a few of the important contributions to the literature bearing on the subject of economic geology, and to some of the newer developments in the mineral industry.

A number of government reports appeared during the year that contain much matter that will be welcomed by engineers and capitalists engaged in the development and exploitation of the mineral deposits of the country. Because of the widespread interest in petroleum and natural gas deposits, a publication that will serve the needs of a large public is the report by F. G. Clapp and others on Petroleum and Natural Gas Resources of Canada. This was published by the Mines Branch of the Department of Mines, Ottawa, in two illustrated volumes of 378 and 404 pages. Volume 1 describes general features pertaining to petroleum and natural gas deposits, technology, and methods of exploitation. Volume 2 treats of the various provinces of Canada in detail. The history of prospecting and development work is given, the geological features are described, and conclusions are drawn as to the future prospects. In spite of certain defects, due probably to a division of responsibility of authorship, the work is very valuable and fills a much felt need.

To the metal miners, C. W. Drysdale's report on the "Geology and Ore Deposits of Rossland", published by the Geological Survey, is of particular interest. On account of the importance of the Rossland ore deposits, the Geological Survey has devoted much attention to the camp, and the report embodies the results of investigations carried on by R. W. Brock and G. A. Young in 1905 and 1906 and by C. W. Drysdale in 1913 and 1914. The ore, which consists chiefly of massive

ECONOMIC GEOLOGY IN CANADA.

pyrrhotite and chalcopyrite with some pyrite and occasionally a little arsenopyrite, occurs in fissures that correspond in strike and dip with tongues of diorite porphyrite, and for long distances follow their contact with older formations. The Centre Star-LeRoi main vein fissure follows the contact between monzonite and augite porphyrite for a long distance. A perusal of the report impresses one with the importance of placing in charge of the development of bodies of ore so dependent on geological conditions an engineer having a thorough training in geology. The report is accompanied by numerous maps and illustrations, of which some of the more illuminating are the stereograms and sections showing the relation of the ore bodies to the geological formations.

Another report well worthy of mention is the posthumous report of A. E. Barlow on "Corundum, Its Occurrence, Distribution, Exploitation and Uses". This is probably the most complete and exhaustive treatise that has yet been published on this subject. A brief description is given of the general geology of the section of country in which the corundum deposits of Ontario occur, and very detailed information is given regarding the geological relations and petrographic character of the igneous rocks with which the corundum deposits are directly associated. These consist of nepheline syenite and associated alkali syenites occurring at the junction of granite and limestone or in the limestone near the granite contact. These syenites are the differentiated products of one highly alkaline and aluminous magma, which in like manner is a peripheral differentiation phase of the granite at whose contact it occurs. After a discussion of the various hypotheses that have been advanced to account for the origin of corundum, the author concludes that "the simplicity and at the same time completeness of the Canadian occurrences of corundum, combined with the fresh and unaltered character of the associated minerals, at once removed all doubts as to the pyrogenic and primary character of the mineral." Descriptions are also given of the various known deposits of corundum throughout the world and of their mode of occurrence.

The "Report on the Non-Metallic Minerals used in the Canadian Manufacturing Industries," by Howells Frechette, presents in a concise form the results of investigations made in the commendable effort on the part of the Mines Branch to lessen Canada's dependence on foreign countries for minerals and mineral products. Mineral matter in a crude or refined state enters into a great many manufactures. The purpose of the report is two-fold: first, to point out to dealers in Canadian minerals the possibility of extending the home market, and, second, to encourage manufacturers to utilize raw materials produced at home. These investigations should render the country more self-contained, and redound to the mutual benefit of the mineral and manufacturing industries.

Another report that serves a useful purpose is the compilation, by Ernest J. Chambers, entitled "The Unexploited West." This was published by the Railway Lands Branch, Department of the Interior. It presents in one volume of convenient size the results of the various explorations that have been conducted in the valley of Mackenzie

PHYSICAL CHARACTERISTICS OF CANADA.

river. For persons desiring the available information regarding the economic resources of this little known portion of Canada, "The Unexploited West" is an acceptable volume.

To review, even briefly, all the important publications that treat of the economic geology of the country is quite beyond the scope of this paper. Among these the following may be mentioned: (1) Report on the Copper Deposits of the Eastern Townships of the province of Quebec, by J. A. Bancroft; (2) Report on the Building and Ornamental Stones of Canada, Volume 3, Province of Quebec, by W. A. Parks; (3) Preliminary Report on the Clay and Shale Deposits of the Province of Quebec, by J. Keele; (4) Oil and Gas Fields of Ontario and Quebec, by Wyatt Malcolm; (5) Rainy River District, Ontario, Surficial Geology and Soils, by W. A. Johnston; (6) Clay and Shale Deposits of the Western Provinces, by Ries and Keele; (7) Preliminary Report on the Bituminous Sands of Northern Alberta, by S. C. Ellis; (8) Coal Fields of British Columbia, by D. B. Dowling; (9) Geology of the Cranbrook Map-Area, British Columbia, by S. J. Schofield; (10) Geology of Franklin Mining Camp, British Columbia, by C. W. Drysdale; (11) Ore Deposits of the Beaverdell Map-Area, by L. Reinecke; (12) Texada Island, B.C., by R. G. McConnell; (13) Upper White River District, Yukon, by D. D. Cairnes; (14) A List of Canadian Mineral Occurrences, by Robt. A. A. Johnston; (15) Report on the Salt Deposits of Canada and the Salt Industry, by L. H. Cole. Nos. 3-6 and 8-14 were published by the Geological Survey, Nos. 2, 7, and 15 by the Mines Branch, Ottawa, and No. 1 by the Department of Colonization, Mines and Fisheries of Quebec.

Important contributions appear in the Summary Reports of the Geological Survey and of the Mines Branch of the Department of Mines, and in the publications of the Mining Departments of the various provinces, more particularly those of Quebec, Ontario, and British Columbia, where competent geologists and mining engineers have been employed to carry on original investigations.

A number of short papers have been published that are worthy of notice. The paper by Willet G. Miller and Cyril W. Knight, entitled Metallogenetic Epochs in the Pre-Cambrian of Ontario presents an age classification of the various ore deposits found in the Pre-Cambrian formations of Ontario, and points out the relative importance of the different geological epochs from the point of view of the mineral industry. J. B. Tyrrell in his paper on the Pre-Cambrian Goldfields of Central Canada, after describing the numerous gold deposits of the Canadian Shield, states that the veins are pre-Huronian in age and that they are generally associated with porphyritic rocks that may be regarded as apophyses from batholithic granitic intrusions of Laurentian and Algonian age. It is believed that most, if not all, of the auriferous veins were formed in the Algonian period. In a paper on the Oil, Gas and Water Content of Dakota Sand in Canada and United States, L. G. Huntley sets forth his reasons for thinking that the prospects for the discovery of natural reservoirs of petroleum in the Dakota sandstone are in general not good. The most promising portions of the formation in Canada are those in which the sandstone begins to play out and

ECONOMIC GEOLOGY IN CANADA.

becomes discontinuous and lenticular in nature. The author directs attention, as others have done, to the broad Battle River anticline, and suggests that while the prospects are more favourable for the discovery of natural gas than oil, it is not impossible that the latter may be found in the sands occurring in the Benton or Niobrara, or higher formations. D. B. Dowling's paper entitled "Correlation and Geological Structure of the Alberta Oil Fields" gives the geological structure, in so far as it is known, of the strata forming the foothills of Alberta, where boring operations have been carried on.

The year 1915 witnessed some activity among prospectors at a number of points. A large number of prospecting parties were drawn to Fond du Lac, Lake Athabaska, by a report that an occurrence of silver ore, similar to that at Cobalt, had been discovered. They met with disappointment, and a field officer of the Geological Survey, who was sent into the district, failed to find anything that would justify such a report.

The discovery of a large body of sulphides, reported to be auriferous, a few miles north of Athapapuskow lake near the boundary between Manitoba and Saskatchewan attracted prospectors to that region. Attention was also directed during the year to auriferous deposits around Rice lake and Gold lake, to the east of Lake Winnipeg.

There was also a big rush of prospectors early in the season into the vicinity of Kowkash, a station on the Transcontinental railway in northern Ontario. This was caused by the discovery of a spectacular showing of native gold in a small quartz vein. Apparently little of economic importance has been found here.

An event that it is hoped will prove to be very important is the discovery of phosphate rock near Banff in the Rocky Mountains park by Frank D. Adams and W. J. Dick, of the Commission of Conservation. A mass of phosphate rock float weighing 31 pounds was found in the valley of Forty-mile creek opposite the southeast end of Stoney Squaw mountain. This specimen carries 24.71 per cent of phosphoric acid (P_2O_5). A loose angular mass of quartzite carrying 7.6 per cent of phosphoric acid was also found on the southern slope of Stoney Squaw mountain near the contact of the Rocky Mountain quartzite and the Upper Banff limestone. Phosphate rock in place was afterwards found by H. S. De Schmid, of the Mines Branch of the Department of Mines, Canada, at the top of the Rocky Mountain quartzite at several points in the vicinity of Banff. At one point the proportion of phosphoric acid (P_2O_5) is as high as 28 per cent. This discovery suggests a possible continuation into Canada of the condition that led to the formation of large deposits of phosphate of lime in the States to the south. The finding and exploitation of a deposit in Canada that could be cheaply mined would be a great boon to the agricultural industry, phosphoric acid being used extensively as a fertilizer.

Among the investigations that the Geological Survey has recently entered upon, the study of soils and of materials for road construction is worthy of notice. Field work was conducted along these lines during the season of 1915 in eastern Ontario and southwestern Quebec. The results also of the experiment in paving made in Edmonton by the

Canada Year Book, 1915.

FLORA OF CANADA.

Mines Branch of the Department of Mines to determine the applicability of the bituminous sands of northern Alberta to road construction will be awaited with much interest.

The mineral industry of Canada partially recovered during 1915 from the set back resulting from the outbreak of the war. This was particularly noticeable in connection with the metallic minerals. Gold mining was carried on briskly, and the demand for metals employed in the manufacture of munitions of war gave an impetus to the mining of such ores as copper, nickel and zinc. The production of non-metallic minerals, especially those used in structural work, has been adversely affected by the war.

Embargoes and difficulties of transportation have led to an investigation of the possibilities of some of Canada's smaller mineral deposits. The mining of the chromite of Quebec has been stimulated, and there has been increased activity in the mining and development of the super-magnesian dolomites of Grenville township, Quebec. Shipments were made also from the hydromagnesite deposit of Atlin district, British Columbia, and an investigation of this deposit was made by the Geological Survey. The manufacture of metallic magnesium in Canada has been started by the Shawinigan Electro-Metals Company. Interest has also been aroused in the manganese, antimony, barite, and other deposits of the country.

The demand for molybdenum on the part of steel manufacturers has led to an investigation of Canada's molybdenite deposits and to the opening of a few mines. In this connection the Mines Branch of the Department of Mines has made an examination of many deposits and has carried on concentration tests in the ore dressing laboratory.

FLORA OF CANADA.

By J. M. MACOUN, C.M.G., F.L.S., Assistant Botanist and Naturalist,
Department of Mines, Ottawa, and M. O. MALTE, Ph.D., Dominion
Agrostologist, Department of Agriculture, Ottawa.

In order to understand the general characteristics of the Canadian flora as we see it to-day, and to make clear and explain certain features in the distribution of a number of species and genera, which at first may seem perplexing or even inexplicable, we must go back to the time when most of the Dominion was a vast glacial waste, destitute of plant life.

It is well known that the whole of Canada east of the Rocky Mountains was at a geologically recent period covered with glacial ice, which slowly advanced from the north and reached as far south as lat. 36°-37° in Eastern North America and lat. 46° on the Pacific coast. Evidences of general glaciation are also seen in the Rocky Mountains in the form of erratic boulders, carried there by the ice from the far north.

As the front of the continental glacier advanced southward, the plants in its vicinity, which naturally were of an arctic type, were driven slowly towards the south. At the same time the existing vegetation

PHYSICAL CHARACTERISTICS OF CANADA.

in front of the glacier, being unable to survive under arctic conditions, was also forced to move southward and to cede the ground to the invading arctic types. When the cold reached its maximum, those parts of the United States which now are temperate thus had a typical arctic flora, *i.e.*, a flora almost identical with the circumpolar flora of the present time. With the return of a warmer climate, the arctic plants gradually retreated northward, followed by more temperate and southern types. Generally speaking, the Canadian plants can therefore all be looked upon as immigrants gradually taking possession of the country after the glacial period, the different species establishing themselves in regions where the climatic conditions met their specific requirements.

The glacial period, furthermore, explains readily a few striking features in the present distribution of Canadian plants, *viz.*, the occurrence of identical species in localities separated by hundreds or even thousands of miles of land, across which, under present conditions, migration is impossible. Thus, a number of species occur in the Rocky Mountains which are identical with species living in Arctic Canada or in Labrador and Eastern Quebec, but occurring nowhere else in the Dominion. These facts may be explained in the words of Darwin, as follows:

As the warmth returned (after the glaciation had reached its height) the arctic forms would retreat northward, closely followed up in their retreat by the productions of the more temperate regions. And as the snow melted from the bases of mountains, the arctic forms would seize on the cleared and thawed ground, always ascending higher and higher, as the warmth increased, whilst their brethren were pursuing their northern journey. Hence, when the warmth had fully returned, the same arctic species, which had lately lived in a body together in the lowlands . . . , would be left isolated on distant mountain summits (having been exterminated on all lesser heights) and in the arctic regions. . . .

With regard to British Columbia, a few words may be said in explanation of the diversity of the flora. Although glaciation may not, at any time, have been general, it is nevertheless highly probable that its flora, at the time of the glacial period, was subjected to the necessity of migration in a north and south direction. At any rate, the British Columbia flora is most closely related to the flora south of the province, genera and species occurring which extend as far south as to New Mexico and California.

The most characteristic feature of the flora of British Columbia is, however, not so much its general relationship to the flora to the south as the existence of different floristic provinces more or less sharply defined. The existence of different "floras" is due not only to the highly diversified climatic conditions, but perhaps still more to the presence of mountain chains and desert-like areas which act as barriers checking the free migration of the plants.

Arctic Zone.—Botanically, the Arctic zone is the region lying north of the tree line. In Canada it extends far to the south of the Arctic circle, especially in the eastern parts of the Dominion. Its southern limit is, roughly, a line running from the estuary of the Mackenzie river to the mouth of the Churchill river, on the west coast of Hudson bay. East of Hudson bay, the tree line runs from about lat. 52° on

Canada Year Book, 1915.

Fig. 3. CAPBERRY
(*Rubus parviflorus*)

FLORA OF CANADA.

Richmond gulf to the mouth of George river on the eastern shore of Ungava bay, and from there in a southeasterly direction along the coast of Labrador to Hamilton inlet.

The arctic flora of Canada is very closely related to that of Europe, especially the Scandinavian, a very great proportion of the arctic Canadian plants being also common in Lapland and arctic Russia. A number of species occurring chiefly in the most western parts of arctic Canada are of Asiatic relationship, and only very few are of American origin. Among these may be mentioned *Douglasia arctica*, *Cardamine digitata*, and *Pleuropogon Sabini*.

With regard to general characteristics, the arctic flora of Canada is quite similar to the arctic or "circumpolar" flora in general. It is composed almost exclusively of perennial plants, which exhibit those well known features with regard to biology and anatomical structure which the arctic flora has in common with the flora of high alpine regions. In the more northern parts, where the ground is physiologically more or less dry, or where it is rocky, the growth is often very compact and includes a great number of plants of the so-called "bunch type." Suffice it to mention *Silene acaulis*, *Papaver radiculatum*, *Potentilla nivea*, *Saxifraga tricuspidata*, *S. oppositifolia*, *Armeria sibirica*, *Androsace Chamæjasme*, *Melandrium apetalum*, *Kobresia Bellardii*, *Carex rupestris*, *C. membranopacta*, *C. nardina*, *Poa glauca*, *Festuca ovina* var. *brevisolia*, etc. Similar growth is also encountered, though less commonly, on the tundra, i.e., the more southerly and physiologically wetter part of the arctic region. Among the tundra plants of the bunch type may be mentioned: *Diapensia lapponica*, *Arenaria macrocarpa*, *A. arctica*. Compactness of growth is also displayed by a number of plants which, though not growing in "bunches" form dense and often very extensive mats. To this type belong *Cerastium alpinum*, *Ranunculus hyperboreus*, *Sibbaldia procumbens*, *Dryas integrifolia*, *Loiseleuria procumbens*, *Cassiope tetragona*, etc. Among the more conspicuous arctic herbaceous plants which grow neither in mats nor in bunches may be mentioned: *Dupontia Fischeri*, *Eriophorum Scheuchzeri*, *E. angustifolium*, *Spiranthes Romanzoffiana*, *Habenaria hyperborea*, *Oxyria digyna*, *Polygonum viviparum*, *Ranunculus nivalis*, *R. affinis*, *Parrya arctica*, *Eutrema Edwardsii*, *Saxifraga flagellaris*, *S. hieracifolia*, *Pyrola grandiflora*, *Primula sibirica*, *Pedicularis flammea*, *Arnica alpina*, *Saussurea alpina*, *Chrysanthemum inaequalifolium*.

As indicated above, the Arctic zone has no real trees. The woody plants, characteristic to the zone in general, are either prostrate forms, such as *Salix arctica* and its varieties, *S. orbicularis*, *S. anglorum*, or of a more shrubby appearance, such as *Betula nana*, *B. glandulosa*, and *Salix Richardsonii*. On the tundra, the woody plants are chiefly of the ericaceous family, the principal ones being *Ledum palustre*, *Rhododendron lapponicum*, *Vaccinium uliginosum*, *V. Oxycoccus*, *V. Vitis-Idæa* var. *pumilum*, *Arctostaphylos alpina*. The berries of the two latter species, with those of *Empetrum nigrum*, form the chief food of the migrating geese in the spring of the year.

Sub-arctic Forest Zone.—The sub-arctic or so called coniferous forest extends in the east from the Arctic zone southward to a line running from

PHYSICAL CHARACTERISTICS OF CANADA.

Anticosti to the southern end of Lake Winnipeg. This line is practically identical with the northern limits of the White and the Red Pine. West of Lake Winnipeg the sub-arctic forest is bounded to the south and west by the prairie and the foothills of the Rocky Mountains, respectively. The Gaspé peninsula and the greater part of New Brunswick may also be included in the sub-arctic forest.

As the name indicates, the sub-arctic forest is decidedly boreal. It is largely coniferous in character, the only deciduous trees occurring throughout the region being poplars and white birch. The sub-arctic forest is as yet almost undisturbed by settlers. It forms a vast reserve of national wealth, and is destined in the future to furnish the chief supply of timber for the pulp and paper industries of eastern North America, as Black and White Spruce (*Picea mariana* and *P. canadensis*) are dominant trees. Of the other coniferous trees, the Banksian Pine (*Pinus Banksiana*) is the most important. It reaches perfection in the western part of the zone, and constitutes the chief source of supply of lumber for the northern prairie region. The other trees characteristic of the zone in general are Aspen Poplar (*Populus tremuloides*), Balsam Poplar (*P. balsamifera*), White Birch (*Betula papyrifera*), Larch (*Larix laricina*) and Balsam Fir (*Abies balsamea*). Between Lake Winnipeg and the Gulf of St. Lawrence, White Cedar (*Thuja occidentalis*), Elm (*Ulmus americana*) and Ash (*Fraxinus nigra*, *F. americana*) are occasionally met with, but cannot be considered characteristic of the sub-arctic forest.

On the whole, the sub-arctic forest covers a rolling country with numerous bogs and lakes in the depressions. Perhaps its most striking character is the abundance of berry shrubs, including Gooseberries (*Ribes oxycanthoides*), Currants (*R. hudsonianum*, *R. triste*), Blueberries (*Vaccinium canadense*), Rock Cranberries (*V. Vitis-Idæa*), Raspberries (*Rubus strigosus*), Yellow-berries (*R. Chamæmorus*), High-bush Cranberries (*Viburnum Opulus*, *V. pauciflorum*) and others.

The vegetation of the bogs shows but little variation, and the species encountered in the bogs of one part of the zone are characteristic of practically the whole sub-arctic forest. A number of species occurring on the tundra further north reach perfection in the bogs of this zone forest. Among the leading bog plants may be mentioned: *Ledum groenlandicum*, *Kalmia polifolia*, *Andromeda glaucophylla*, *Habenaria hyperborea*, *Epipactis repens* var. *ophioides*, *Menyanthes trifoliata*, *Utricularia americana*, *Pedicularis groenlandica*, *Eriophorum* and *Carex* species.

On the whole, the flora of the sub-arctic forest is remarkably uniform throughout, and hardly a species is found that does not occur in the Arctic zone or to the south. A noteworthy exception to this general rule is *Castalia tetragona*, the smallest of the water lilies, which in Canada is found in the sub-arctic forest only.

Hardwood Forest Zone.—The hardwood forest zone includes all eastern Canada south of the sub-arctic forest with the exception of a small region in southern Ontario, extending between the shore of Lake Erie and a line running approximately from Toronto to Windsor.

There is little cultivated land in Eastern Canada north of this

Canada Year Book, 1915.

FIG. 4. WHITE HEATH
(*Cassiope Mertensiana*)

FIG. 5. HOODED LADIES' TRESSES
(*Spiranthes Romanzoffiana*)

FLORA OF CANADA.

zone. As its name indicates, it is characterized chiefly by deciduous trees, the principal ones being: Basswood (*Tilia americana*), Sugar Maple (*Acer Saccharum*), Red Maple (*Acer rubrum*), Black Ash (*Fraxinus nigra*), White Ash (*Fraxinus americana*), White Elm (*Ulmus americana*), Yellow Birch (*Betula lutea*), Red Oak (*Quercus rubra*), Burr Oak (*Quercus macrocarpa*), Beech (*Fagus grandifolia*). Of the coniferous trees, the White Pine (*Pinus Strobus*), the Red Pine (*P. resinosa*), the Hemlock (*Tsuga canadensis*), and the White Cedar (*Thuja occidentalis*), are the most important.

The underbrush, though very variable and made up of a great number of species, is generally rather scanty and becomes conspicuous—as a component of the forest—only along its borders or where the woods are very open. Among the most typical shrubs may be mentioned: Service Berry (*Amelanchier spicata*), Moosewood (*Dirca palustris*), Purple Flowering Raspberry (*Rubus odoratus*), Sumach (*Rhus typhina*), Poison Ivy (*Rhus Toxicodendron*), and Arrow-woods (*Viburnum alnifolium*, *V. acerifolium*, *V. cassinoides*).

As the rainfall is abundant throughout the hardwood forest zone, the herbaceous vegetation is rich, in both species and individuals, everywhere where light and soil conditions permit. In the woods proper it is rather insignificant after the foliage of the trees is fully developed. In the spring, however, it is very luxuriant, and especially where the soil is rich and deep there is a magnificent display of beautifully coloured and showy forms, for instance: Trillium (*Trillium grandiflorum*, *T. erectum*, *T. undulatum*), Bellwort (*Uvularia perfoliata*), Dog's-Tooth Violet (*Erythronium americanum*), Showy Orchis (*Orchis spectabilis*), Jack-in-the-Pulpit (*Arisæma triphyllum*), Spring Beauty (*Claytonia caroliniana*), Violets (*Viola*, blue, white, and yellow forms), Hepatica (*Hepatica triloba*, *H. acutiloba*), Dutchman's Breeches (*Dicentra Cucullaria*), Squirrel Corn (*Dicentra canadensis*), Bloodroot (*Sanguinaria canadensis*), Pepper-root (*Dentaria diphylla*), Barren Strawberry (*Waldsteinia fragarioides*), Flowering Winter-green (*Polygala paucifolia*), Blue Phlox (*Phlox divaricata*), etc. Others, less conspicuous, but characteristic of the hard-wood spring flora, are species of Sedges (*Carex*), Wild Ginger (*Asarum canadense*), Blue Cohosh (*Caulophyllum thalictroides*), False Mitrewort (*Tiarella cordifolia*), Mitrewort (*Mitella diphylla*), Star Flower (*Trientalis americana*) and Showy Lady's Slipper (*Cypripedium hirsutum*).

During the summer the herbaceous vegetation is chiefly confined to borders of woods, clearings and other places where growth is not suppressed or kept back on account of too much shade. It is rather inconspicuous and poor except in moist or wet situations. On moist and low ground occur: *Habenaria psychodes*, *Gentiana crinita*, *Asclepias incarnata*, *Physostegia virginiana*, *Chelone glabra*, *Lobelia cardinalis*, etc., whilst *Pogonia ophioglossoides*, *Calopogon pulchellus*, *Arethusa bulbosa*, *Sarracenia purpurea* and others adorn the bogs and swamps.

The autumn flowers are chiefly composites with Asters, Golden Rods (*Solidago*) and Joe-Pye (*Eupatorium*) in the greatest profusion.

Very characteristic of the zone is the autumnal colouring of the leaves of trees, shrubs and herbaceous plants. This autumnal colouring

PHYSICAL CHARACTERISTICS OF CANADA.

lasts a comparatively long time, from about the first week of September to the second week in October, dependent on the dryness of the season. During that period the most splendid display of colours is exhibited, especially in the open mixed woods where underbrush is well developed. Every shade of yellow, golden bronze, red and scarlet is mixed in a gorgeous symphony of colours, generally most marvellously modulated by the sombre deep dark or bluish green of the conifers, which are dotted among the deciduous trees. No such wealth of colour is ever met with in any other country.

Carolinian Zone.—This zone is confined to a small tract of land in southern Ontario, bounded to the south by Lake Erie and to the north by a line running approximately from the northern shore of Lake Ontario to Windsor. Its flora is most typically developed in the Niagara peninsula and on the very shore of Lake Erie. In general physiognomy it is rather similar to the hardwood forest flora just described, but differs greatly as far as characteristic species—and even genera—are concerned. It is decidedly southern as to species, and exhibits a large number of forms which occur nowhere else in Canada.

The most characteristic trees are the Hickories (six species), the Oaks (ten species), the Black Walnut (*Juglans nigra*), the Chestnut (*Castanea dentata*) and the Sycamore (*Platanus occidentalis*). Less abundant and more local in their distribution are: Cucumber tree, (*Magnolia acuminata*), Tulip tree (*Liriodendron Tulipifera*), Flowering Dogwood (*Cornus florida*), which all have beautiful and very conspicuous flowers, Papaw (*Asimina triloba*), Red Mulberry (*Morus rubra*), American Crab Apple (*Pyrus coronaria*), Sour Gum (*Nyssa sylvatica*), Sassafras (*Sassafras variifolium*) and others.

The herbaceous vegetation is very rich, at least a hundred species occurring nowhere else in Canada being found in the zone. A few of the most conspicuous may be mentioned, viz.: Yellow Nelumbo or "Lotus Flower" (*Nelumbo lutea*), May Apple (*Podophyllum peltatum*), Wild Lupine (*Lupinus perennis*), Tick Trefoil (*Desmodium*), Flowering Spurge (*Euphorbia corollata*), Swamp Rose Mallow (*Hibiscus Moscheutos*), Wild Pansy (*Viola Rafinesquii*), Prickly Pear (*Opuntia Rafinesquii*), Poke Milkweed (*Asclepias phytolaccoides*), Wild Potato Vine (*Ipomoea pandurata*), Downy Phlox (*Phlox pilosa*), Waterleaf (*Hydrophyllum appendiculatum*), Bee Balm (*Monarda didyma*), Foxglove (*Gerardia pedicularia*, *G. virginica*), Tall Bellflower (*Campanula americana*), Great Lobelia (*Lobelia siphilitica*), Ironweed (*Vernonia altissima*, *V. illinoensis*), Dense Button Snakeroot (*Liatris spicata*), Prairie Dock (*Silphium terebinthinaceum*), Cup Plant (*Silphium perfoliatum*), Sunflower (*Helianthus decapetalus*, *H. divaricatus*), Tall Coreopsis (*Coreopsis tripteris*), Indian Plantain (*Cacalia tuberosa*), Showy Lady's Slipper (*Cypripedium hirsutum*), etc. Golden Seal (*Hydrastis canadensis*) and Ginseng (*Panax quinquefolium*) were at one time abundant but are now practically extinct.

The Prairie.—Under the general term prairie is understood the vast grass-covered area of the provinces of Manitoba, Saskatchewan and Alberta. It is bounded in the east and north by the sub-arctic forest and in the west by the foothills of the Rocky Mountains.

FLORA OF CANADA.

The prairie which begins a few miles east of Winnipeg has been subdivided into three zones, known as the first, second and third "Prairie Steppes."

First Prairie Steppe.—This, as defined by Professor John Macoun, includes "the low plain of Manitoba, bounded by a line of elevated country, which commences at the international boundary, at a point some distance west of Emerson, and extends northwestwardly under the names of Pembina, Riding, Duck, Porcupine and Pas mountains."

The southeastern part of the area so defined differs from the true prairie in that it is characterized by many woodland plants which have their home east of the Great Lakes, but occur rarely, if at all, between Lake Huron and the Manitoba border, for instance, Nettle Tree (*Celtis occidentalis*), Basswood (*Tilia americana*), Wild Plum (*Prunus americana*), Hawthorn (*Crataegus* species), Virginia Creeper (*Psedera quinquefolia*), Climbing Bitter-Sweet (*Celastrus scandens*), Wild Grape (*Vitis vulpina*), Moonseed (*Menispermum canadense*), Bloodroot (*Sanguinaria canadensis*), Columbine (*Aquilegia canadensis*), Hog Peanut (*Amphicarpa monoica*), Tick Trefoil (*Desmodium canadense*), "Prickly Cucumber" (*Echinocystis lobata*), Gentian (*Gentiana procera*), Lousewort (*Pedicularis canadensis*), Indian Paint Brush (*Castilleja coccinea*), Ox-eye (*Heliopsis scabra*), Cone-flower (*Rudbeckia laciniata*), etc.

The prairie proper of the first prairie steppe is confined chiefly to what is known as the "Red River Valley," i.e., the low flat plains south and west of Winnipeg. In this region trees are met with only as forming narrow fringes along the rivers. Elm (*Ulmus americana*), Oak (*Quercus macrocarpa*), Poplar (*Populus tremuloides*, *P. balsamifera*), Ashleaved Maple (*Acer Negundo*) are the most abundant. Away from the immediate borders of the streams the prairie is treeless. It is covered with an abundance of herbaceous plants, growing in the greatest profusion. The most widely represented families are *Compositæ*, *Rosaceæ*, *Leguminosæ*, *Gramineæ*, and *Cyperaceæ*, but the species representing them cannot be said to be characteristic of the zone, as practically all of them are found in suitable localities further west.

Second Prairie Steppe.—This extends westward to a line running approximately from the international boundary at long. 103°-30' in a northwesterly direction to Battleford. The flora of this zone is rather diversified, and several very different types of plant associations are met with.

In the north, where the prairie and the sub-arctic forest meet, the flora is composed of species characteristic of both zones. This is also true of the northern part of the third prairie steppe.

In the southwestern part of the zone, i.e., the country southwest of Moose mountains in Saskatchewan, the vegetation is in many respects closely related to that of the dry belt of the third prairie steppe. The grass is very short and the vegetation in general decidedly xerophile in character. In places, large sandy tracts exist which are covered with a profusion of cactus (*Mamillaria vivipara*), and in others there is no vegetation except that peculiar to arid soil.

PHYSICAL CHARACTERISTICS OF CANADA.

Extending from the bases of the hills forming the boundary between the first and second prairie steppes there is much broken or parklike country. This is also met with in the Qu'Appelle river valley and in other parts of the zone. Poplar and Oak are the chief trees of the bluffs, and the herbaceous vegetation, as might be expected, is made up of a mixture of prairie and woodland forms.

The greater part of the second prairie steppe is true prairie, where no trees are met with except in the river valleys. Shrubs occur, generally forming low thickets or copses, and very frequently small clumps composed of a single species. On the exposed prairie their growth is always stunted. Snowberry (*Symphoricarpus occidentalis*), Silver berry (*Elæagnus argentea*), Buffalo berry (*Shepherdia argentea*), Saskatoon berry (*Amelanchier*) and Roses of which there are several species, are the most important. In damper situations, Meadow Sweet (*Spiræa salicifolia*) occurs, and in wet places, such as borders of ponds and marshes, willows are abundant. The herbaceous vegetation varies somewhat with soil conditions. The following species may, however, be mentioned as representing the typical prairie flora¹: *Stipa viridula*, *Spartina gracilis*, *Avena Hookeri*, *Poa crocata*, *Calamovilfa longifolia*, *Elymus Macounii*, *Agropyrum Smithii*, *A. tenerum*, *A. Richardsonii*, many species of *Carex*, *Allium cernuum*, *Lilium philadelphicum*, *Smilacina stellata*, *Rumex persicarioides*, *Lychnis Drummondii*, *Anemone hirsutissima*, *Ranunculus rhomboideus*, *Lesquerella argentea*, *Sisymbrium incisum*, *Cleome serrulata*, *Potentilla arguta*, *P. pennsylvanica*, *P. bipinnatifida*, *P. camporum*, *P. effusa*, *P. plattensis*, *P. pulcherrima*, *P. viridescens*, *Geum triflorum*, *Thermopsis rhombifolia*, *Astragalus caryocarpus*, *A. hypoglottis*, *A. adsurgens*, *A. bisulcatus*, *A. pectinatus*, *A. missouriensis*, *Psoralea esculenta*, *P. argentea*, *Glycyrrhiza lepidota*, *Petalostemum candidum*, *P. purpureum*, *Hedysarum boreale*, *Zizia cordata*, *Lomatium macrocarpum*, *Musineum divaricatum*, *Asclepias ovalifolia*, *Acerates viridiflora*, *Phlox Hoodii*, *Agastache Fœniculum*, *Physostegia parviflora*, *Monarda mollis*, *Pentstemon gracilis*, *Orthocarpus luteus*, *Lobelia spicata*, *Liatris scariosa*, *Grindelia squarrosa*, *Aster multiflorus*, *A. lævis*, *Erigeron glabellus*, *E. philadelphicus*, *Antennaria campestris*, *Ambrosia trifida*, *Lepachys columnaris*, *Helianthus rhomboideus*, *Helenium autumnale*, *Artemisia biennis*, *Senecio palustris*, *S. *eremophilus*, *Cirsium undulatum*, *Agoseris glauca*.

Third Prairie Steppe.—This steppe includes the rest of the prairie up to the foothills of the Rocky Mountains. In its northern parts, *i.e.*, north of lat. 52°, the flora is very similar to that of the second prairie steppe. The southern part of the region, however, is of an altogether different type. The rivers and even creeks are flowing in deep narrow valleys, and the country in general is broken by coulees and low hills. The precipitation is scant, and, as a result, the vegetation is xerophile and often desert-like in character. Except on Wood Mountain and Cypress

¹ For these and for other plants in the West only the Latin names are given, the reason being that the majority of the species characteristic of Western Canada have no generally recognized common names.

FLORA OF CANADA.

Hills no trees occur, unless along the borders of the streams in the valleys. The ponds, marshes and lakes are not even fringed with shrubs.

Large districts, especially in the Coteau de Missouri belt, are characterized by the absence of drainage valleys, the result being that the water in the lakes and ponds is generally saline, and that numerous alkali flats occur. The vegetation in such situations is very sparse and of course halophyte in character, the typical plants being *Distichlis spicata*, *Hordeum jubatum*, *Puccinellia airoides*, *Corispermum hyssopifolium*, *Atriplex* and *Chenopodium* species, *Salicornia prostrata*, *Suaeda depressa*, *Salsola Kali*, *Rumex mexicanus*, *Ranunculus cymbalaria*, *Plantago eriopoda*, *Heliotropium curassavicum*, *Pleurogyne fontana*, *Crepis runcinata*. In the saline ponds themselves, *Ruppia maritima* is common.

As mentioned above, the vegetation of the southern part of the third prairie steppe is decidedly xerophile. As a result, a number of species occur which approach desert types in being, in some way or other, protected against rapid transpiration. Such plants are: *Eriogonum flavum*, *Eurotia lanata*, *Opuntia polyacantha*, *Mamillaria vivipara*, *Potentilla Hippiana*, *Oxytropis splendens*, *Linum rigidum*, *Plantago Purshii*, *Aplopappus spinulosus*, *Artemisia frigida*, *A. cana*, *A. Ludoviciana*, *Senecio canus*, *Iva axillaris*, *Lygodesmia juncea*, and others.

Of other plants, characteristic of the southern part of the third prairie steppe, the following may be mentioned: *Bouteloua oligostachya*, *Munroa squarrosa*, *Schedonnardus paniculatus*, *Oryzopsis hymenoides*, *Stipa spartea*, *S. comata*, *Sporobolus Richardsonii*, *Calamagrostis americana*, *Danthonia intermedia*, *Agropyron dasystachyum*, *Zygadenus chloranthus*, *Rumex venosus*, *Oxybaphus hirsutus*, *Ranunculus cardiophyllus*, *Polanisia trachysperma*, *Chamærhodos erecta*, *Oxytropis Lambertii*, *Hedysarum Mackenzii*, *Potentilla flabelliformis*, *Heuchera hispida*, *Linum Lewisii*, *Malvastrum coccineum*, *Oenothera triloba*, *O. serrulata*, *O. pallida*, *Gaura coccinea*, *Solanum triflorum*, *Pentstemon acuminatus*, *P. procerus*, *Orobanche fasciculata*, *Liatris punctata*, *Gutierrezia Sarothræ*, *Chrysopsis villosa*, *Solidago missouriensis*, *S. rigida*, *Aplopappus lanceolata*, *A. acaulis*, *Townsendia exscapa*, *Aster angustus*, *Erigeron cæspitosus*, *E. pumilus*, *Antennaria aprica*, *Helianthus petiolaris*, *H. giganteus*, *Gaillardia aristata*, *Arnica pedunculata*, *Senecio integerrimus*, *Cirsium Drummondii*, *Lactuca pulchella*.

Rocky Mountain Foothills.—A great number of prairie species reach a considerable altitude in the foothills of the Rocky Mountains. On the other hand, a number of sub-alpine forms descend practically to the prairie, the result being that at the base of the foothills, where the two types of floras intermingle, the vegetation is very rich in species. As the foothills are ascended the prairie forms gradually disappear and are replaced by mountain species. The vegetation in general becomes more luxuriant in appearance, the herbaceous plants grow taller, shrubs begin to form an important feature in the flora and real forests are established. Besides typical mountain and prairie forms, the following species may be considered as characteristic of the foothills: *Stipa Richardsonii*, *Avena striata*, *Bromus Porteri*, *Elymus dasystachys*,

PHYSICAL CHARACTERISTICS OF CANADA.

Eriogonum subalpinum, *Arenaria capillaris*, *Aquilegia brevistyla*, *Delphinium glaucum*, *D. Menziesii*, *Thalictrum* occidentale*, *Actæa arguta*, *Parnassia montanensis*, *Spiræa lucida*, *Oxytropis viscidulus*, *Hedysarum sulphurescens*, *Geranium Richardsonii*, *G. incisum*, *Epilobium latifolium*, *Angelica Dawsoni*, *A. Lyallii*, *Carum Gairdneri*, *Primula americana*, *Lappula floribunda*, *Castilleja* species, *Lonicera glaucescens*, *Aster conspicuus*, *Erigeron speciosus*, *Artemisia discolor*, *Arnica foliosa*, *Senecio lugens*.

Rocky Mountains Proper.—The lower parts of the mountains are covered with forest, composed chiefly of coniferous trees, viz.: *Pinus albicaulis*, *P. Murrayana*, *Pseudotsuga mucronata*, *Abies lasiocarpa*. In these woods, only a small number of shrubs occur, the most typical ones being *Pachystima Myrsinites*, *Rhododendron albiflorum*, *Menziesia ferruginea*, and, in open and springy places, *Salix commutata*, *S. Barclayi*. Except along the edges, in open spaces and along brooks and rivulets, the herbaceous vegetation of the Rocky Mountain forest is rather scant. The principal species typical of the forest are: *Clintonia uniflora*, *Corallorhiza* species, *Epipactis Menziesii*, *Rubus pedatus*, *Pyrola* species and other members of the ericaceous family.

On the grassy slopes above the tree-line the vegetation is very rich in species, exhibiting the general characteristics of alpine vegetation. As typical species may be mentioned: *Phleum alpinum*, *Calamagrostis purpurascens*, *Deschampsia atropurpurea*, *Poa paddensis*, *Poa Wheeleri* and other grasses, *Erythronium grandiflorum*, *Claytonia lanceolata*, *Caltha leptosepala*, *Aquilegia flavescens*, *Ranunculus Eschscholtzii*, *Leptarrhena amplexifolia*, *Parnassia fimbriata*, *Epilobium Hornemannii*, *Pedicularis bracteosa*, *P. racemosa*, *Valeriana Scouleri*, *Aster Engelmannii*, *Erigeron salsuginosus*, *Petasites frigida*, *Arnica latifolia*, *Senecio triangularis*, *Agoseris aurantiaca*.

Still higher up the alpine flora is represented by a number of species of which the following ascend to the snow line: *Juncus Mertensianus*, *J. Parryi*, *Salix nivalis*, *Claytonia megarrhiza*, *Anemone occidentalis*, *Draba crassifolia*, *D. lonchocarpa*, *Smelowskia calycina*, *Physaria didymocarpa*, *Arabis Lyallii*, *Saxifraga cœspitosa*, *S. Lyallii*, *Potentilla glaucophylla*, *P. dissecta*, *Dryas* species, *Astragalus alpinus*, *Oxytropis inflatus*, *Viola orbiculata*, *Phyllodoce empetriformis*, *Cassiope Mertensiana*, *Gentiana glauca*, *Phacelia sericea*, *Myosotis alpestris*, *Castilleja pallida*, *Solidago ciliosa*, *Aplopappus Lyallii*, *Erigeron aureus*, *E. jucundus*, *E. multifidus*, *Antennaria lanata*, *A. racemosa*, *Saussurea densa*, *Crepis nana*, *Hieracium gracile*. Here also grow a number of species which have their homes in the Arctic zone, e.g., *Festuca ovina* var. *brevifolia*, *Carex rupestris*, *C. nardina*, *Kobresia Bellardi*, *Silene acaulis*, *Melandrium alpinum*, *Cerastium alpinum*, *Draba* species, *Cardamine bellidifolia*, *Potentilla nivea*, *Sibbaldia procumbens*, *Saxifraga oppositifolia*, *S. cernua*, *Arctostaphylos alpina*, *Androsace Chamæjasme*.

Selkirk Range.—The Selkirks differ in many respects from the Rockies. Whilst the latter may be characterized as a chain of isolated mountains, the Selkirk range has more the character of a high level plateau from which the peaks rise. For this reason there are, in the Selkirks, real alpine meadows, whilst, in the Rockies, similar plant formations are

FLORA OF CANADA.

generally met with on steep slopes. With regard to the vegetation above the tree-line, it may be said that the differences between the two mountain systems are chiefly due to differences in moisture supply, the Selkirks being favoured with much more abundant precipitation than are the Rockies. For this reason the alpine meadow associations of the Selkirks extend almost to the snow-line and, for the same reason, a number of the high alpine plants which, in the Rockies, are characteristic of the bare peaks above the grassy slopes, are not met with at all in the Selkirks.

The Selkirk forest differs from that of the Rocky Mountains with regard to composition as far as the trees are concerned, the principal species being *Thuja plicata*, *Pseudotsuga mucronata*, *Tsuga heterophylla*, *T. Mertensiana* and *Picea Engelmanni*. The undergrowth is, on the mountains proper, very similar to that of the Rocky Mountains, and although much more luxuriant is not represented by many species.

In the lower valleys, however, and on lower levels, where the forest is more open in character, the shrubby as well as the herbaceous undergrowth is very different. Not only is it luxuriantly developed, but the species of which it is composed are of a different type. The Rocky Mountain flora is disappearing, its place being taken to such an extent by Pacific coast species that the traveller, or the casual observer, will find it rather difficult to detect any marked differences between the flora of the Selkirk valleys and that of the coniferous forest of the Pacific coast.

The Coast Range.—Biologically, the mountains of the Coast range are very similar to those of the Selkirk range. This is to a certain extent also true from a systematic standpoint, as practically all species found in the Selkirks also occur in the Coast range.

The Coast range, however, although having the bulk of plant species in common with the Selkirks, may be considered a distinct botanical province. The reasons for this are that many species occur which are confined to the coast proper. The Coast range is the home of a number of what may be considered truly endemic plants, which, as far as is known at present, are very local in their distribution and are found nowhere else in British Columbia. Among those plants may be mentioned especially numerous species of *Antennaria*, *Arnica*, *Senecio*, *Aster*, *Erigeron* and other composites.

Owing to the long growing season, the high average temperature and the abundance of the precipitation, the vegetation in the valleys and the lowlands of the Coast range is almost subtropical in appearance. The trees, especially *Thuja*, *Picea* and *Pseudotsuga*, reach gigantic dimensions, and the forest, no matter how dense, always possesses a very luxuriant undergrowth. In old untouched forests, fallen trunks, shrubs and herbs form an almost impenetrable tangle. This is especially true where Salal (*Gaultheria Shallon*) or Devil's Club (*Fatsia horrida*) are luxuriantly developed.

Of trees characteristic of the valleys and the lowlands may be mentioned: *Picea sitchensis*, *Alnus oregona*, *Acer macrophyllum*, *A. circinatum*, *Rhamnus Purshiana*, and of shrubs: *Salix lasiandra*, *S. sitchensis*, *S. Scouleriana*, *S. Hookeriana*, *Berberis Aquifolium*, *Ribes Lobbii*, *R. bracteosum*, *R. sanguineum*, *Rubus spectabilis*, *R. parviflorus*, *Rosa* species,

PHYSICAL CHARACTERISTICS OF CANADA.

Prunus species, *Amelanchier florida*, *Osmaronia cerasiformis*, *Pyrus diversifolia*, *Fatsia horrida*, *Gaultheria Shallon*, *Vaccinium parvifolium*, *V. ovalifolium*, *Sambucus callicarpa*. Although here classed as shrubs, *Prunus*, *Pyrus*, *Amelanchier* and the willows often become trees near the coast.

The herbaceous vegetation is very richly developed. Of the great number of species characteristic of the region may be mentioned: *Adiantum pedatum*, *Lomaria spicant*, *Asplenium cyclosorum*, *Polystichum munitum*, *Aspidium dilatatum*, *Equisetum Telmateja*, *Agrostis exarata*, *A. microphylla*, *Trisetum canescens*, *T. cernuum*, *Deschampsia elongata*, *Poa Howellii*, *Glyceria pauciflora*, *Bromus*, *Festuca* and *Elymus* species, *Carex cryptocarpa*, *C. dives*, *C. magnifica*, *C. macrocephala*, *C. Mertensii*, *Lysichiton camtschatcense*, *Fritillaria lanceolata*, *F. camtschatcensis*, *Erythronium giganteum*, *Maianthemum dilatatum*, *Trillium ovatum*, *Asarum caudatum*, *Nymphaea polysepala*, *Trautvetteria grandis*, *Ranunculus occidentalis*, *Coptis asplenifolia*, *Achlys triphylla*, *Dicentra formosa*, *Tiarella unifoliata*, *T. trifoliata*, *Tellima grandiflora*, *Leptaxis Menziesii*, *Aruncus acuminatus*, *Oenanthe sarmentosa*, *Stachys ciliata*.

Vancouver Island.—The interior and also the west coast of Vancouver island present, in general, the same botanical features as those characteristic of the Coast range just described. The southeastern part of the Island, however, is of a quite different botanical type. Here the growth is influenced by the comparatively small amount of precipitation and, as a result, the flora is ecologically more or less of a "dry belt" type. In addition, it is characterized by a number of species which belong to the Californian flora and occur nowhere else in Canada. Among the plants characteristic of the southeastern part of Vancouver Island may be mentioned: *Hookera hyacinthina*, *Camassia Leichtlinii*, *Olsynium grandiflorum*, *Hydastylus borealis*, *Quercus Garryana*, *Dentaria macrocarpa*, *Thysanocarpus curvipes*, *Lupinus* and *Trifolium* species, *Sidalcea Hendersonii*, *Opuntia polyacantha* var. *borealis*, *Godetia caurina*, *Boisduvalia densiflora*, *Gilia* species, *Scrophularia californica*, *Castilleja levisecta* and numerous others.

Dry Belts of British Columbia.—A few words may be said about the most important dry belts of British Columbia, including the Okanagan and the Kamloops districts. These regions, owing to the scant precipitation and to the nature of the soil, have a flora which strangely contrasts with that of the other parts of the British Columbia mainland.

In the dry belts two floristic subdivisions may be recognized, which, however, run more or less into each other and, for this reason, will not be dealt with separately. The one subdivision is characterized by so called bunch grasses, of which *Agropyrum spicatum* and *Elymus condensatus* are the most prominent species, and is more or less destitute of forest forming trees. The other floristic subdivision of the dry belts is more densely wooded, the characteristic tree of the forest being the Yellow Pine (*Pinus ponderosa*). On the whole, the dry belts may be said to be park-like in general character.

Besides the above mentioned plants the following may be noted: *Eriogonum niveum*, *E. heracleoides*, *Atriplex argentea*, *Thelypodium laciniatum*, *Lesquerella Douglasii*, *Ribes cereum*, *Kuntzia tridentata*, *Astragalus*

FAUNAS OF CANADA.

collinus, *A. convallarius*, *A. Purshii*, *Sphæralcea Munroana*, *Mentzelia albicaulis*, *M. lævicaulis*, *M. integrifolia*, *Oenothera pallida*, *O. andina*, *Phlox longifolia*, *Gilia aggregata*, *G. Harknessii*, *G. pungens*, *Collomia grandiflora*, *C. linearis*, *Pectocarya penicillata*, *Senecio Thomsoiensiis*, *Erigeron concinnus*, *E. filifolius*, *Chænactis Douglasii*, *Chrysothamnus nauseosus*, *C. puberulus*, *Artemisia trifida*, *A. tridentata*.

CONCLUSION.

While it is impossible in a few pages more than to outline briefly the general characteristics of the flora of so large a country as Canada—a flora represented by nearly 5,000 well defined species and varieties of flowering plants—the enumeration of species representative of the different zones will, it is hoped, serve to give a fair idea of the flora as a whole and help a botanist unfamiliar with a particular region to determine what he may find there. Although there is a large and growing number of local botanists in Canada the general flora of the country is known to few but professional botanists, and it is chiefly for the information of the former class, and for those who do not reside in Canada, that this article has been written.

The writers desire to acknowledge their indebtedness for the photographs which illustrate this article to the Geological Survey of the Department of Mines for Figs. 1, 6 and 7, and to Mrs. Julia Henshaw of Vancouver for Figs. 2, 3, 4 and 5, which appear in her book entitled "Rocky Mountain Flowers."

FAUNAS OF CANADA.

By P. A. TAVERNER, Department of Mines, Ottawa.

Whether the fauna of the western hemisphere was derived from that of the eastern, or *vice versa*, as is contended by various authorities, there is a close relationship between them, and one of these contentions is certainly true. Geological evidence shows that in previous ages the northern circumpolar life was even more homogeneous than to-day, and types now found in but one of the great continental circumpolar divisions were once common to both. Old and now submerged land connections between the continents have been postulated both from zoological and geological evidence, and a more or less complete continuity of land throughout the northern hemisphere, in former times, must be acknowledged before present American biotal conditions can be thoroughly understood. That this connection was in the far north and in what is now arctic or sub-arctic climate did not prohibit a continual interchange of warmth-loving species, for the presence of coal in very high latitudes points to milder if not tropical or subtropical conditions where now we find perpetual snow and ice. We must therefore conceive of a pre-glacial time when tree-ferns and other luxuriant coal producing forests occupied extreme northern lands, and such species as elephants, horses and other warmth loving species could spread from one continent to the other.

PHYSICAL CHARACTERISTICS OF CANADA.

At this time the entire northern hemisphere was probably peopled by an essentially similar population developing along approximately parallel lines through a more or less free interchange of individuals. These conditions, however, were interrupted by the breaking down of the land connecting the continental areas and the occurrence of the glacial epochs¹, when solid ice covered a large part of the northern hemisphere in North America south to below the Great Lakes. Probably this resulted, over the whole of Canada, in conditions closely approximated to those at present found in Greenland, and a temperate climate did not occur short of the Gulf States. Though these arctic conditions prevailed gradually they none the less inevitably blotted out the original population of the subtropical north.

The species that were of too inflexible a nature to adapt themselves to new conditions, or forsake their ancestral habitats, became extinct and perished entirely; some more adaptable, while they retreated before the face of the oncoming ice, became harder and capable of living in temperate or sub-arctic climates, and others more easily moved were driven far south, perhaps into South America, where in competition with forms already resident they either triumphed at their expense or succumbed, as the case might be. The survivors under new and various influences evolved into numerous new forms and differentiations more or less distinct from the original stock. These conditions prevailed for what can be historically regarded as great periods of time in the process of which an originally continuous and fairly homogeneous world population became a number of isolated units, differentiating along independent and often divergent lines. Some forms in each hemisphere disappeared, specializations of old ones arose, and the bases of the peculiarly characteristic Faunas of the two great continental areas were laid.

On the gradual retreat of the great ice barrier to inter-continental communication at the beginning of the present geological era, many descendants of the species that had been driven south gradually returned, following as closely upon the edges of the withdrawing ice as their natures and requirements permitted. Some were satisfied with their acquired southern homes or were more able to retain them in competition with their neighbours; they remained and probably became the ancestors of our present typically southern genera; but others seized with avidity upon the opportunity to occupy the gradually opening countries to the north, where competition was relaxed, and each succeeding spring advanced as far into them as climatic conditions permitted or competitive necessity demanded. Thus the north again became repopulated, but not with similar forms in both continents. On the contrary, each was supplied with forms made widely dissimilar through their enforced disconnected residence and divergent development.

¹Though here treated for convenience and clearness as but one single occurrence, it should be borne in mind that the glacial epochs were composed of a number of advances and retreats, more or less complete, of the ice cap with various intervals between. This, however, does not seriously alter the zoological results here stated.

FAUNAS OF CANADA.

During this reoccupation a number of interesting things happened. High elevation is comparable in the condition it originates to high latitudes, and mountains, even in the tropics, if high enough, are covered with perpetual snow. High mountain and arctic conditions are similar and have little variety. Consequently, as the glacial ice withdrew first from the warmer lowlands some species adapted to the colder climate, instead of following the retreat along the valley lines northward, merely climbed adjacent slopes and there found acceptable habitats. If the mountains were too low to retain their arctic character in sufficient degree, those forms perished and were replaced by the next succeeding association until a permanent population was at last secured. If the elevation were greater the arctic forms survived as isolated communities, and hence to-day we sometimes find arctic forms on high table-lands and mountain ranges separated by many hundreds of miles of warm climate from their nearest allies.

It is obvious that these cold loving "relicts" of a previous order should, in the natural state of things, have been the last to break their connection with the European or Asiatic continent and the first to come again into contact with their old allies. In some cases probably the very hardiest never completely lost touch with each other across the frozen wastes of separation. Arctic conditions are remarkably similar the world over, and these forms just clinging to the edge of habitability existed under like conditions and with far less stimulus to divergent progress than those in the warmer and more varied south. Evolutionary development is slower in the colder than the warm climates; generations are, on the average, slower of development and slight departures from a narrow successful groove are more ruthlessly weeded out; in fact there is less latitude between success and failure and fewer chances of departures from types being beneficial. All these reasons worked to the single end that the northern or arctic fauna was during the glacial epoch much less differentiated in the eastern and western hemisphere, and to-day we find that while in the extreme south the forms are now widely divergent, those of the northern areas are remarkably similar, and the circumpolar fauna is nearly identical throughout the circle. So in America we have a distribution of life closely related to European and Asiatic forms in the north, but gradually and regularly differentiating into peculiar and special forms as we proceed south.

Having considered the history and consequent relation of North American life to that of the world in general we can take up the details of its distribution on our continent. The general trend of geographical distribution in Canada is from southeast to northwest. Ocean currents have much to do with this. Our east coast is chilled by the cold arctic current coming directly down from the polar ice fields through Davis strait, and the west coast is warmed by the grateful temperature of the great final sweep of the Japan current. When we realize that the barren Labrador coast of the Gulf of St. Lawrence is in almost the same latitude as southern British Columbia and is slightly south of the most southerly point of the British Isles, we can see what a great and fundamental influence these ocean currents have on the distribution of life upon our continent.

PHYSICAL CHARACTERISTICS OF CANADA.

The general outline of zonal life distribution is well known. All are familiar with the fact that tropical life differs from temperate and from arctic. Close study however shows that besides these broad and obvious associations are minor ones. Various attempts have been made to map them out, and perhaps the most successful and generally accepted one for our purposes is that by Dr. C. Hart Merriam. This divides North America into three regions, a Boreal, Austral and a Tropical one, with the first two each divided into three life zones: the Arctic, Hudsonian and Canadian zones for the Boreal Region and the Transition, and Upper and Lower Austral zones for the Austral Region. In Canada we have five of these zones represented from the north: the Arctic, Hudsonian, Canadian, Transition and Upper Austral. These extend across the continent, roughly agreeing with latitude, but thrown out of regularity, as previously indicated, by local conditions and agreeing closely with the mid-summer isotherms or temperature belts.

The Arctic Zone is the barren land of the far north, treeless and almost shrubless, and extends south to include all the north shore of the continent as well as the islands above. The distinctive land mammals of this zone are the Polar Bear, the Musk Ox, Barren Land Caribou, Arctic Fox, Arctic Hare and Lemming. Amongst the characteristic birds are Snow Buntings, Ptarmigan, Longspurs, Snowy Owl and the Gyrfalcons. This is the great nesting ground for many of our waders and more northern ducks and geese. There are few residents, as most forms migrate in winter.

Photo. by Harlan I. Smith.

Fig. 3. Moose in the Rocky Mountain National Park, Banff.

The Hudsonian Zone is the land of scrub forests, small stunted trees, mostly coniferous, and scattered dwarf willows and poplars. The southern boundary of this zone extends from the north shore of the Gulf of St. Lawrence near the mouth of James Bay, thence in a wavy curve to Great Slave Lake where it drops south suddenly to a latitude about on line with the lower point of the Alaska Pan-handle, and thence to near the coast. It thus includes the southern Ungava peninsula, a narrow belt extending northwest from James Bay, the Yukon, northern British Columbia and southern Alaska. It is penetrated from the north by the Arctic Zone which persists on the mountains of the Yukon and from the south by the Canadian Zone which follows up the valleys of the Mackenzie and Peace rivers. It is shut off from the sea on the Pacific

FAUNAS OF CANADA.

side by the Alaska Pan-handle which has an intrusive Canadian fauna. On the other hand, it works down the Rocky mountains in a narrow band and scattered isolated spots to across the United States boundary. This zone can be considered more as a transition between the Canadian and Arctic zones than a primary division itself. It contains species whose centres of abundance are on either hand and a few peculiar to it. Musk Oxen, Caribou and Ptarmigan range into it in winter from the north, and it forms the extreme northern distribution of Wolverine, Woodland Caribou and Moose. Its most characteristic birds are the Rough-legged Hawk, Great-gray Owl, Northern Shrike, Pine Grosbeak, White-winged Cross-bill and Fox Sparrow.

The Canadian Zone occupies the greater area of Canada and can be roughly defined as the heavy coniferous forest belt. It includes practically all the remainder of the Dominion except the inner shores of the Nova Scotia peninsula, southern Ontario and Quebec in a narrow strip from about Montreal to just below Georgian bay on Lake Huron, the prairies, a small irregular fringe along the Pacific coast opposite Vancouver Island and a few mountain valleys penetrating the southern boundary of British Columbia. Beyond our borders it extends irregularly south on the mountains and high land near both coasts, including the south shores of Lake Superior, and penetrates the Hudsonian Zone on the north along the valleys of the Mackenzie and Peace rivers and runs up most of the Alaska Pan-handle. This is the first land fit for systematic cultivation. The characteristic life is more numerous than in the preceding zones and includes the Moose, Woodland Caribou, Lynx, Marten, Porcupine, Varying Hare, White-throated Sparrow, numerous warblers, Olive-backed Thrush, Three-toed Woodpeckers, Pileated Woodpecker, Spruce Grouse and Canada Jay.

Photo. by P. A. Taverner.

Fig. 4. Canada Porcupine.

The Transition Zone is agriculturally the most important Canadian faunal division. It lies just along the southern border, including most of both shores of the Bay of Fundy, Quebec below the Gulf of St. Lawrence, a narrow belt following the north shores of Lakes Ontario and Erie, all of the western prairies and intrusive valleys into the south of British Columbia and the shores of the Strait of Georgia. The name Transition well describes this fauna.

It contains comparatively few distinctive species, but is where many northern and southern forms meet. Except in the prairies it is the country of the hardwood forests where many of the temperate and harder fruits, vegetables and cereals reach their highest perfection and is the northern limit of some of the tenderer ones. Its southern limit lies in the United States below, striking almost squarely across the continent on a line with the lower points of the Great Lakes, with excursions southward along the mountain ranges east and west and penetrated by extensions of the Upper

PHYSICAL CHARACTERISTICS OF CANADA.

Austral fauna along warm lowland valleys in the west. It forms the northern limit of range of the Cotton-tail and Jack-Rabbits and the American Elk, and is just touched upon by the Varying Hare from the north; the Common Mole of the south meets the Star-nosed and Brewers Mole of the north and the Wild Cat partially replaces the Canada Lynx. Amongst birds, the Wild Turkey, Bob-white, two Cuckoos, Towhee, Wood Thrush and Yellow-Vireo are at the northern limit of their ranges, and the Baltimore Oriole, Bluebird, Catbird and Bobolink overlap the solitary Vireo and Wilsons Thrush.

The Upper Austral Zone in Canada is small in area but important in production. It just crosses our borders in a narrow shore belt along Lake Erie extending to the south side of Lake Ontario including the Niagara Peninsula. It forms the famous Ontario fruit belt and is comparatively strongly marked by quite a number of characteristic forms especially amongst plants. It extends south as far as the northern borders of the Gulf States, variously dotted and cut into by intrusive branches of the neighbouring faunas from either side, especially in the broken country of the west.

There are not many peculiar mammals that are well known to the general public, and perhaps the Opossum is the most distinctive. Among birds we have the Yellow-breasted Chat, Mockingbird, Carolina Wren, Carolina Chickadee, Orchard Oriole, Barn Owl, a number of distinctive southern warblers and southern subspecific forms allied to more northern variations.

Photo by P. A. Taverner.

Fig. 5. Chipmunk.

These make the latitudinal or thermal divisions of our faunal life. Outside of the species mentioned are numerous forms that extend over the whole area, but show in different zones variations recognizable to the expert but stopping short of specific distinction. A good example is the Hairy Woodpecker. This bird breeds over all the wooded parts of North America, but the birds from the Lower Austral zone are quite separable by the trained eye from those of the Upper Austral and Tran-

sition and these from the large northern form of the Hudsonian. This is but one case of many where a northern and a southern race exist in the same species and which we designate subspecies. Some of these geographical races are so slightly differentiated as to require an expert to separate them while others are marked and striking. The critical difference between a full species and a subspecies is the fact that the latter intergrade and blend into each other gradually. With species the break between is sudden, and intermediates do not occur.

With this zonal distribution and a variation of life groups depending basically upon temperature, we have another system of distribution east and west, depending largely upon physical conditions of habitat—the arrangement of land and water or mountain ranges forming barriers

FAUNAS OF CANADA.

or highways of migration and leading certain forms in certain directions while barring them from others—and the comparative rainfall and humidity of climate. This has a primary direct influence upon the forms of life we are considering, as well as a secondary and indirect one through the plants and insects which give them food or shelter.

The principal divisions east and west are divided by the Rocky mountains, which successfully cut the Pacific coast off from close contact with eastern forms. This great backbone of the continent extends in a northwesterly direction and forms the political boundary between Alberta and British Columbia. An extension of this line until it strikes the centre of the main Alaska-Yukon boundary roughly approximates the dividing line of the east and west faunas, leaving a triangular patch to the west including British Columbia, southern Yukon and southern Alaska as the western or mountain fauna, and cutting through three of the trans-continental zones, the Transition, Canadian and Hudsonian with fragments of the arctic on the higher elevations to the north.

The mountain district is characterized by an abundant rainfall, a high average humidity and a greatly diversified and rugged topography, forming a succession of mountain ranges with deep valleys between, paralleling the coast, facilitating intercommunication in this direction but obstructing it from east to west. These topographical conditions continue to the south well into Mexico and enforce migration routes and conditions and associations more or less isolated. The marked humidity of the climate, especially near the coast, also causes or encourages special physiological changes in numerous organisms tending as a rule to produce larger size and browner or richer colouration. These differences in physical conditions and the isolation formed by the barrier mountains have produced a great number of forms peculiar to the trans-mountain district. In fact, comparatively few species, either of birds or animals, extend across the mountains from the east unmodified, and the native population can be divided into three heads: subspecific variations of eastern forms, species confined to the area and forms of evident mountain origin but spreading from them a certain distance eastward. Typical amongst the first may be mentioned the Moose and Woodland Caribou, the Oregon subspecies of the Ruffed Grouse, Harris', Rocky-Mountain and Gairdner's Woodpeckers, Northwest Flicker, Dusky and Streaked Horned Larks, many forms of the warblers and sparrows and others.

Of full species confined to this fauna are: Douglas Squirrel, Black-tailed Deer, Pica, Yellow-bellied Marmot, Bushy-tailed Wood Rat, Little Stripped Skunk or *Spilogale*, Blue and Franklin's Grouse, Band-tailed Pigeon, Red-breasted and Williamson's Sapsucker, Stellar's Jay, Black and Vaux Swift, Black-chinned and Rufus Hummingbirds, Clark's Nutcracker, Northwestern Crow, Dipper, Chestnut-backed Chickadee, Varied Thrush and others. Of forms typical of the mountains but spreading a little way east are: Hoary Marmot, Mule Deer, Grizzly Bear, Red-naped Sapsucker, Lewis's Woodpecker, Red-shafted Flicker, Hammond's and Wright's Flycatcher, Black headed Grosbeak and many more.

PHYSICAL CHARACTERISTICS OF CANADA.

Photo by P. A. Taverner.

Fig. 6. American Sparrow Hawk (female).

The Eastern fauna is comparatively homogeneous across the continent in a diagonal direction from the Atlantic coast to Alaska, with but slight variation in physical aspect, except in the prairie region of the central west. It is a country of low, even topography with good rainfall and covered with a uniform forest of little variety except such as is due to latitude and zonal distribution, but into it project the upper limits of the Great Plains characterized by great dryness, near-desert conditions and almost an entire absence of trees. This penetrates the moist continental fauna as a semicircular extension of the Transition Zone, its chord on the international boundary extending from the eastern Manitoban line to the mountains and north to Edmonton and Prince Albert.

The general tendency of this prairie fauna is towards small size and pale bleached colouration. Such species as are characteristic of it are those like the Prong-Horn Antelope, Bison, Coyote, Gopher, Prairie Chicken, Sage Hen, Burrowing Owl, Leconte's Sparrow, and Lark Bunting whose open country requirements debar them from wooded land. The remainder of its fauna is similar to that of the eastern country but generally subspecifically differentiated from it through the dryer climate and desert-like conditions. Some species that can be exemplified under this division are Western Horned Owl, Say's Phoebe, Desert Horned Lark, Pale Goldfinch, Western Clay-coloured Sparrow, Dacotah Song Sparrow, Prairie Marsh Wren, etc.

The true Eastern fauna, though generally similar from the far northwest to the Atlantic coast, does show a slight tendency to variation north of these plains, but the influence is slight and in broad treatment can be disregarded. Many species extend unmodified throughout the area, or when modification occurs it can usually be attributed to either thermal differences or the influence of the closely allied neighbouring prairie forms it comes into contact with in migration or on its edges. In general, most of the subspecific forms mentioned as prairie or western are represented by type subspecies in this great eastern fauna, which is perhaps the typical fauna of Canada and which gives distinctive character to our biotal resources.

FAUNAS OF CANADA.

ILLUSTRATIONS.

The illustrations of the preceding article are from photographs furnished by the Geological Survey of the Department of Mines, Ottawa. Fig. 1, Willow Ptarmigan in the Mountains of British Columbia, is a species representative of extreme arctic conditions extending south from the mountain tops. Fig. 2, Gannet or Solan Goose, is a maritime species illustrating the close relationship between Europe and America; it inhabits both sides of the North Atlantic. Fig. 3, Moose in the Rocky Mountain National Park, Banff, is a species illustrating the life of the woodland areas of the Canadian Zone from New Brunswick in the east to the interior of Alaska. Fig. 4, Canadian Porcupine, is a large rodent of the Canadian Zone woodlands. Its quills are much used by the Indians in embroidery of birch bark and other crafts. Fig. 5, Chipmunk, is a common rodent of the eastern Transition and Canadian Zones and southward. To the west it is replaced by closely allied forms. Fig. 6, American Sparrow Hawk (female), is a common species ranging right across the continent throughout the wooded and prairie areas and southward.

III.—AREA AND POPULATION.

Area by Provinces and Territories.—Table 1 shows the total area of the Dominion in land and water and the distribution into provinces and territories:

1.—Land and Water Area of Canada by Provinces and Territories.

Provinces.	Land.	Water.	Total Land and water.
	sq. miles.	sq. miles.	sq. miles.
Prince Edward Island.....	2,184	—	2,184
Nova Scotia.....	21,068	360	21,428
New Brunswick.....	27,911	74	27,985
Quebec.....	690,865	15,969	706,834
Ontario.....	365,880	41,382	407,262
Manitoba.....	231,926	19,906	251,832
Saskatchewan.....	243,382	8,318	251,700
Alberta.....	252,925	2,360	255,285
British Columbia.....	353,416	2,439	355,855
Yukon.....	206,427	649	207,076
Northwest Territories.....	1,207,926	34,298	1,242,224
Total.....	3,603,910	125,755	3,729,665

The water area is exclusive of Hudson Bay, Ungava Bay, the Bay of Fundy, the Gulf of St. Lawrence, and all other tidal waters, excepting that portion of the River St. Lawrence which is between Pointe-des-Monts in Saguenay and the foot of Lake St. Peter in Quebec.

Increase of Population.—According to the corrected returns of the fifth Census, the total population on June 1, 1911, was 7,206,643, representing an increase of 1,835,328 since the previous Census of April 1, 1901. For the period covered, the rate of increase, viz., 34.17 p.c., is the largest in the world, and is due to the heavy tide of immigration which set in with the beginning of the present century. The countries next in order, in respect of the percentage rates of increase during the same decade, are: New Zealand 30.5, the United

AREA AND POPULATION.

States 21, Germany 15.2, Holland 14.8, Switzerland 13.2, Denmark 12.6, Belgium 10.9, Austria 9.3, United Kingdom 9.1, Hungary 8.5, Sweden 7.5, Italy and Norway 6.8 and France 1.6. Ontario and Quebec continue to be the most largely populated of the nine provinces, the former having 2,523,274 and the latter 2,003,232 inhabitants. None of the other provinces has yet reached half a million; but Saskatchewan has the third largest population with 492,432. All the provinces show an increase since 1901, excepting Prince Edward Island, where the population has decreased by 9,531, or 9.23 p.c. The Yukon and Northwest Territories, with relatively sparse populations, show decreases as compared with 1901. The greatest relative increase is in the western provinces, especially in Saskatchewan and Alberta. The population of Saskatchewan, 492,432, as compared with 91,279 in 1901, shows an increase of 401,153, or over 439 p.c. Alberta has grown from 73,022 in 1901 to 374,663 in 1911, an increase of 301,641, or 413 p.c. Manitoba, 455,614, shows an increase of 200,403 from 255,211, or 78.5 p.c., and British Columbia one of 213,823, or over 119 p.c., the population having grown from 178,657 in 1901 to 392,480 in 1911.

Average Density.—The average density of the population works out to 1.93 per square mile, calculated upon the total of 3,729,665 square miles, as shown in Table 1. This figure may be compared with the density per square mile of other new countries, as, for instance, the United States 30.69, the Argentine Republic 5.99, the Commonwealth of Australia 1.53, the Dominion of New Zealand 9.63 and Newfoundland 1.47. Prince Edward Island has a density of 42.91, Nova Scotia of 22.98, New Brunswick of 12.61, Ontario of 9.67, Manitoba of 6.18 and Quebec of 5.69. The other three provinces, Saskatchewan, Alberta and British Columbia, are each below 2 per square mile.

2.—Population of Canada by Provinces and Territories in the years 1871-81-91-1901-11.

Queens.....	489,571	18,920	19,393	38,313	50.09	43,134

NOTE.—The totals of areas for Canada and the provinces and territories are as measured by a planimeter on the map, and embrace land and water; while those for districts are the totals of their respective subdistricts, and are land areas only, excepting, as may be indicated by footnotes, where large areas are unsurveyed and unoccupied.

NOTE.—The sign (—) denotes a decrease.

¹By map measurement.

Distribution of Urban Population.—In Tables 6-8 is shown the distribution of the urban population into cities, towns, and villages. There are now four cities in Canada with an aggregate population exceeding 100,000: Montreal (470,480), Toronto (376,538), Winnipeg (136,035) and Vancouver (100,401), as compared with only two in 1901: Montreal (267,730) and Toronto (208,040). There are three

¹By map measurement.²Total land area.

POPULATION.

cities with populations in 1911 exceeding 50,000: Ottawa (87,062), Hamilton (81,969) and Quebec (78,710). Two towns with a population in 1911 exceeding 5,000, viz., North Vancouver, B.C. (8,196), and Cobalt, Ont. (5,638), were not in existence in 1901, whilst 14 other towns had no existence in 1891, viz., Regina (30,213), Edmonton (24,900), Maisonneuve (18,684), Fort William (16,499), Moosejaw (13,823), Saskatoon (12,004), Port Arthur (11,220), Lethbridge (8,050), North Bay (7,737), Thetford Mines (7,261), Prince Albert (6,254), Medicine Hat (5,608), Strathecona (5,579) and North Toronto (5,362).

Division of the population into urban and rural gives 3,280,964 of the former and 3,925,679 of the latter. The increase in the urban population is indeed one of the most striking facts revealed by the Census of 1911. Whilst during the decade 1901 to 1911 the rural population increased by 576,163, or 17.20 p.c., the increase in the urban population was 1,259,165, or at the rate of 62.28 p.c. In the Maritime Provinces and in Ontario the urban population increased at the expense of the rural, for the latter has actually declined since 1901, in Prince Edward Island by 10.81 p.c., in Nova Scotia by 7.26 p.c., in New Brunswick by 0.58 p.c. and in Ontario by 4.18 p.c. The urban population of these provinces increased during the same period by the following percentage ratios: Prince Edward Island 0.1, Nova Scotia 45.43, New Brunswick 28.81 and Ontario 41.93.

Table 8 analyses the urban population of Canada for each of the census years 1901 and 1911. It shows that, in 1911, of the total population of 7,206,643, not less than 2,354,131, or 32.70 p.c., were dwelling in cities or towns with a population exceeding 5,000, the total urban population being 3,280,964, or 45.53 p.c. of the entire population.

NOTE.—The sign minus (–) denotes a decrease.

Sex Ratios.—The male population of Canada was returned as 3,821,995 and the female as 3,384,648; so that the excess of males over females is 437,347, which is in the ratio of 1.13: 1,—an excess percentage of 13,—or of 130 males per 1,000 females. Reciprocally the number of females per 1,000 males is 886, the deficiency of females as compared with males being greater in Canada than probably in any other country. Amongst other countries showing a similar female deficiency per 1,000 males are Ceylon (888), the Dominion of New Zealand (896), the Commonwealth of Australia (926), the Union of South Africa (941), the United States (943) and India (953). Excepting India and Ceylon, where female infanticide has prevailed, the countries named are new, and the proportions are affected by immigration in which the male element predominates. In England and Wales the number of females per 1,000 males was 1,068 both in 1911 and 1901, and only Norway shows a greater proportion, viz., 1,069. In other European countries the number of females per 1,000 males is: Scotland 1,063, Denmark 1,061, Sweden 1,046, Austria 1,036, France 1,033 (in 1901), Switzerland 1,031, Germany 1,026, Holland 1,021, Hungary 1,019, Belgium 1,017, Italy 1,010 (in 1901) and Ireland 1,004.

The proportions by provinces in Canada are shown in Table 11 for the two census years 1901 and 1911. For the latter year the number

POPULATION.

of females per 1,000 males for each province was: British Columbia 560, Manitoba 622, Alberta 673, Saskatchewan 688, Ontario 942, New Brunswick 956, Nova Scotia 961, Quebec 980 and Prince Edward Island 991. It will be seen that the disparity is especially marked in the western provinces.

Table 12 shows the percentage proportion of females to males in the rural and urban divisions of the population, respectively, for the census year 1911. Amongst the rural population the female element is in defect for Canada by 16.48 p.c., but amongst the urban population it is so by only 5.05 p.c. The defect is most marked in the western provinces. Of the urban population, in two out of the three Maritime provinces, in Quebec and in Ontario, there is actually an excess of the female population, such excess being as high as 17.68 p.c. in Prince Edward Island. But in the west the female deficiency is again apparent, though (except as regards Saskatchewan) not to the same extent as in the rural population.

POPULATION.

Foreign-born Population.—A special report issued by the Census and Statistics Office in 1915 gives the foreign-born population of Canada in 1911 as 752,732, which is 10.4 p. c. of the total population of 7,206,643. The report possessed special interest in consequence of the war, and Table 14, which is constructed from data contained therein, shows how the foreign-born population in Canada was distributed as between the present hostile, allied and neutral countries.

Tables 15 to 19 show the numbers of the foreign-born population of Canada in 1911 under a variety of classifications as to sex, year of arrival, province, birth-place and citizenship. Table 20 shows the numbers of the foreign-born population in cities of 15,000 and over. Although numerically the numbers of the foreign-born in Montreal and Toronto are greater than in any of the western cities, yet the proportions are considerably smaller, being 9.2 p. c. for Montreal and 8.8 p. c. for Toronto, as compared with 27.6 p. c. for Vancouver, 24.2 p. c. for Winnipeg, 22.6 p. c. for Regina, 22.5 p. c. for Edmonton and over 20 p. c. for Calgary and Victoria.

14.—Distribution of Foreign-born Population as between Hostile, Allied and Neutral Countries, 1911.

		Rumania.....	7,991	Other countries..	15,568
Total.....	167,441	Total.....	177,720	Total.....	407,571

The immigration records show that for the fiscal years 1912 to 1915 78,999 Austro-Hungarians and 17,626 Germans have entered the country. No statistics of departures are available. Of the total of 752,732 foreign-born persons in Canada, in 1911, 470,927, or 62.6 p. c., were males and 281,805, or 37.4 p. c., were females, the males amongst the foreign-born of hostile countries being for Austria-Hungary 77,562, for Germany 39,577 and for Turkey and Syria 3,523. The total number of foreign-born who have become naturalized British subjects in Canada is 344,557, or nearly 46 p. c. of the total foreign-born. Persons born in the enemy countries, but who have become naturalized in Canada, number for Austria-Hungary 60,949, or 50 p. c., for Germany 23,283, or 59 p. c., and for Turkey and Syria 1,889, or 39 p. c. Of the total foreign-born population, 303,680 were born in the United States. Of this number 152,308 were naturalized and 151,372 were still alien. Of the immigrant population born in the United States 136,720 were of British, 1,804 were of Austro-Hungarian and 45,374 were of German origin. Of these numbers, 70,527 of British origin, 813 of Austro-Hungarian origin, and 21,362 of German origin were naturalized.

Population of Military Age.—Tables 21 to 23, compiled from the census records of 1911, relate to the male population of military age in Canada (excluding the Yukon and Northwest Territories); that is to say, of all ages from 18 to 45, both years included. Table 22, read horizontally, shows the percentage proportions for Canada and by provinces of the male population of military age that on June 1, 1911, were Canadian-born, British-born or foreign-born. The Canadian-born were 98.37 p.c. in Prince Edward Island, 93.42 p.c. in New Brunswick, 87.22 p.c. in Nova Scotia, or over 90 p.c. for the Maritime provinces as a whole. In Quebec the Canadian-born represents 87.44 p.c., in Ontario 70.57 p.c. In all the Western provinces the Canadian-born constitute less than one-half, being 40.62 p.c. in Manitoba, 38.51 p.c. in Saskatchewan, 30.46 p.c. in Alberta and 26.23 p.c. in British Columbia. British-born males are 18.38 p.c. of the total in Ontario, and from 24 to 34½ p.c. in the provinces west of the Great Lakes. Foreign-born males constitute the largest proportion in Alberta and British Columbia.

Table 23, read vertically, shows the percentage distribution by provinces of the Canadian-born, British-born and foreign-born males of military age. Of the Canadian-born population, Quebec contained 30.81 p.c. and Ontario 37.04 p.c. Of the British-born, Ontario contained nearly 35 p.c. and the four western provinces nearly 54 p.c. Of the foreign-born, 21.15 p.c. were in Ontario, 20.39 p.c. in British Columbia and over 47 p.c. in the middle west.

Table 21 gives in absolute numbers the male population of military age, classified according to nativity, by single years and by provinces.

Occupations of the People of Canada.—Tables 24 to 31 are taken from Vol. VI (Occupations) of the Report on the Census of 1911, which was published in 1915. In these tables, unless otherwise indicated, the figures relate to the population of ten years of age and over.

The report shows that out of a total population in Canada in 1911 of 7,179,650 (excluding 26,993, the population of the Yukon and Northwest Territories), the occupation was recorded of 2,723,634, representing nearly 38 p.c. of the total population, and 49 p.c. of the population of 10 years and over. Of the total engaged in gainful occupations in 1911 2,358,813, or 79.5 p.c., were males and 364,821, or 14.3 p.c., were females. It is also stated that in the thirty years 1881 to 1911 the increase in the number of agricultural producers did not keep pace with the increase in population. In the 1881 Census 15.4 p.c. of the total population were engaged in agriculture, in 1891 the proportion (15.3 p.c.) was practically the same; in 1901 the proportion dropped to 13.5 p.c. and in 1911 to 13 p.c. From 1891 to 1911 the increase in the total population within the present limits of the nine provinces was 49.5 p.c. During the same period there was an increase of 27 p.c. in the number employed in agricultural pursuits. But it must not be overlooked that the increase in time- and labour-saving de-

AREA AND POPULATION.

vices on the farm has been so extensive as to compensate to a large degree for the fact that the population employed in the primary production of foods has not kept pace with the increase in population. The increase in the number employed in the various manufacturing industries was 264,262, or better than 116 p.c. in the same period. The distribution of commodities, wholesale and retail, required more than $2\frac{1}{2}$ times as many persons in 1911 as were needed in 1891, while the transportation demands of the country (land and water) required the services of three men in 1911 where one person sufficed ten years previously.

Other Census Tables.—Tables relating to the population of cities and towns by birthplace; the source of the population by province of residence; the native population by province of residence; the distribution in western Canada of natives of the eastern provinces; the foreign-born population and the British- and foreign-born male population of 21 years and over were published in the Canada Year Book, 1913. (Tables 20-25, pp. 75-80.) Tables relating to dwellings and families; origins of the people; religions of the people; birthplace and citizenship; population by age-periods and infirmities were published in the Canada Year Book, 1914. (Tables 14-26, pp. 59-74.)

Area and Population of British and Foreign Countries.—Table 32 gives the area and population of the United Kingdom and British Possessions, and Table 33 the area and population of the principal foreign countries of the world. The first-named table is taken from the Statistical Abstract for the British Self-governing Dominions, etc., 1913 [Cd. 7,786], and does not therefore include Egypt, which was declared a British Protectorate on December 18, 1914. By adding the area (347,490 square miles) and the population (11,287,359) of Egypt and the area (984,362 square miles) and the population (2,600,000) of the Anglo-Egyptian Soudan, the total area and population of the British Empire, as given in Table 32, are raised to 12,605,102 square miles (area) and 431,156,792 (population). The area of Egypt, however, includes the deserts. According to the Statesman's Year Book the cultivated and settled area of the Nile Valley and Delta is not more than 12,226 square miles. In other respects Tables 32 and 33 do not take into account changes due to the war.

NOTES RELATING TO TABLE 32 ON PAGES 100, 101, 102.

¹ Estimated population 1910. ² Excluding the military and persons on ships in harbours. ³ The population is exclusive of the military. ⁴ The New Territories and Wei-Hai-Wei were leased to the British Government in 1898. In 1904 a part of the New Territories (New Kowloon) was placed under the jurisdiction of the Hong Kong Sanitary Board, and since that date the area (13 sq. miles) and the population (13,693 persons at the Census of 1911) have been included in the figures of Hong Kong. ⁵ The population stated for Australia is exclusive of full-blooded aborigines, estimated at 100,000 in 1911. ⁶ Including the area of the lakes and river Nile within the territorial limits of the Uganda Protectorate. ⁷ Partly estimated, a census of natives not being available. ⁸ Including the Protectorate districts. ⁹ Including 567,561 children—sex not stated.

AREA AND POPULATION.

VITAL STATISTICS.

Vital Statistics by Provinces.—In Canada the registration of births, marriages and deaths is under provincial control, and at present divergent methods, with, in New Brunswick, entire lack of statistics, render impossible the deduction for any series of years of annual birth-, marriage and death-rates for the Dominion as a whole.

Table 34 shows, however, by provinces (New Brunswick excepted) the number of births, marriages and deaths in each of the years 1911 to 1914, according to the latest returns of the provincial registrars. Using the census figures of population for 1911, and estimates of the Census and Statistics Office for 1912, 1913, and 1914, crude birth-, marriage-, and death-rates per 1,000 of the population living have been calculated for each year, as well as the excess of births over deaths. For Prince Edward Island no data for the year 1912 are available. The figures by provinces in this table are not strictly comparable, owing to the diversity of practice which at present prevails as between the different provincial registrars. Not only is the statistical year not uniform for all the provinces, but there is no uniformity in the practice as regards the inclusion or exclusion of still-births. Thus, in Nova Scotia, Quebec and Ontario still-births are eliminated from the calculations; but in Prince Edward Island, the Northwest provinces and British Columbia they are included, and for these provinces the numbers of still-births, which are too small to affect materially the birth- and death-rates calculated, are given in a note at the foot of the table.

Vital Statistics of Cities.—Table 35 records the number of births, marriages and deaths by principal cities for the years 1913 and 1914 in continuation of the tables given in previous editions. In this table the natural increase per 1,000 of the population is based upon the locally estimated population in all cases where given.

34.—Number of Births, Marriages and Deaths, by Provinces, 1911-1914.

Provinces.	Births.	Birth-rate per 1,000 living.	Marriages.	Marriage-rate per 1,000 living.	Deaths.	Death-rate per 1,000 living.	Excess of Births over Deaths.

AREA AND POPULATION.

IMMIGRATION.

Immigrant Arrivals in 1915.—Immigration into Canada continues to be affected by the European war, the number of immigrants in 1915 showing a further marked decline. For the fiscal year ended March 31, 1916, the number of immigrant arrivals was 48,537, as compared with 144,789 in 1915 and 384,878 in 1914, the year before the war broke out. Of the total number of immigrants in 1915-16, 8,664, or 18 p.c., came from the United Kingdom, 36,937, or 76 p.c., came from the United States and 2,936, or 6 p.c., came from other countries. For the calendar year 1915 the total number of immigrant arrivals was 48,466, including 9,606 from the United Kingdom, 36,098 from the United States and 2,762 from other countries.

Juvenile Immigration.—The Chief Inspector of British Immigrant Children and Receiving Homes reports that in 1915-16, 821 children were received in Canada through 10 different agencies and were placed in foster homes or situations. Applications for the services of these children remain largely in excess of the supply, as appears from Table 40. This shows the number of British Juvenile immigrants—not members of families—and the number of applications for their services received by the various agencies during the fiscal years 1901 to 1916. Altogether about 77,800 children have been placed out in Canada since the organization of this class of immigration began in 1868. Of the total, about 26,300 have come from the Dr. Barnardo Homes..

Oriental Immigration.—Tables 43 and 44 relate to Chinese immigration and give a record of such immigration since 1886 and the number of Chinese in Canada at the Censuses of 1901 and 1911. In 1885, owing to the heavy influx of Chinese into Canada, legislation (48-49 Vict. c. 71) was passed providing that thereafter Chinese of the labouring classes be required as a condition of their entry into the Dominion to pay a head tax of \$50 each; on January 1, 1901 (63-64 Vict. 1900, c. 32), this amount was increased to \$100 and on January 1, 1904 (3 Edw. VII, 1903, c. 8), to \$500. The exempt classes have varied slightly from time to time; but, generally speaking, have included consular officers, their wives, children and suites, Chinese merchants, their wives and children, and Chinese belonging to the learned professions. Practically all of those who have been admitted as exempt have been merchants and members of merchants' families. Chinese are allowed under the Act to register out of Canada for absence abroad for a period of twelve months, which registration allows them the privilege of free return within the period specified. For each of these registrations a fee of \$1 is charged. The total revenue under the Chinese Immigration Act is made up of head taxes, registration fees for leave of absence and fines collected for infringements of the Act. From 1886 to 1902 one quarter of the net proceeds of the revenues under the Chinese Immigration Act was paid to the provinces wherein they were collected. From 1903 the proportion so paid to the provinces

IMMIGRATION.

has been one-half, in accordance with an amending Act of 1902 (2 Edw. VII, c. 5). Table 45 shows the total number of oriental immigrants arriving in Canada since 1901.

Immigration Expenditure and Revenue.—Table 46 shows the annual expenditure for immigration purposes for each fiscal year since 1868. For the year ended March 31, 1915, the amount was \$1,658,182. On the other side of the account there is the revenue derived from the payments of the Chinese as recorded in Table 43. For the year ended March 31, 1915, the revenue from this source amounted to \$588,124, of which \$252,634 was paid to the provinces; so that the Dominion expenditure on immigration in the year 1914-15 exceeded the Dominion revenue from immigration by \$1,322,692. For the year ended March 31, 1914, the expenditure was \$1,893,298 and the revenue \$2,644,593, of which \$1,284,652 was paid to the provinces; so that for the year 1913-14 the Dominion immigration revenue exceeded the Dominion immigration expenditure by \$533,357.

IV.—EDUCATION.

General Features of Canadian Education System.—Under the British North America Act, 1867, the right to legislate on matters respecting education was exclusively reserved to the provincial legislatures, subject to the maintenance of the rights and privileges of the denominational and separate schools as existing at the time of union or admission of provinces. In general there are two fundamental systems of education throughout Canada, one that of the Protestant communities, free from the control of religious bodies, and the other that of the Roman Catholic French and Irish communities in which education is united with the religious teaching of the Roman Catholic Church. In Ontario, Roman Catholics have the right to form what are known as "Separate Schools" for elementary education, the local rates for the support of these schools being separately levied and applied. In Quebec, Saskatchewan and Alberta similar provisions apply.

In all the provinces the cost of education is defrayed from the public revenues, provincial and local, and public elementary education is free to parents or guardians, except for certain small fees which are payable in parts of the province of Quebec. With the exception of Quebec all the provinces have laws of compulsory education, but under conditions that differ as between one province and another. In general the provincial laws provide for uniformity in the training of teachers, the use of text books and the grading of pupils. Secondary schools or departments, and colleges or universities for higher education, exist under government control in all the provinces, and the three classes of teaching institutions are more or less co-ordinated to allow of natural transition from the lower to the higher. School terms and holidays are arranged to suit climatic and other local conditions; so that it is frequently possible for students to work their own way through college and the university. Arrangements for the superannuation of teachers are applied in Nova Scotia, New Brunswick, Quebec and Ontario.

Recent movements in the direction of nature study, manual instruction, school gardens, agriculture, domestic science and technical education are all energetically in progress, and in the more progressive provinces the higher education of women is an important feature of university life.

A more detailed description of the Canadian system of public education, as organized in each province, was published in the Year Book of 1914, pages 94 to 116.

Education Statistics of Canada.—There being at present no effective co-ordination of education statistics it is difficult to construct comparative tables for Canada. In the first place, the year to which the statistics relate differs according to province. Thus the school year ended June 30 is adopted for statistical purposes by Prince Edward Island, New Brunswick, Quebec, Manitoba and British Columbia; the education year for Nova Scotia ends on July 31; and the calendar year ended December 31 is selected by Ontario, Saskatchewan and Alberta. In the tables numbered 1 to 5 an attempt is, however, made

EDUCATION

to bring together by provinces (1) the number of elementary schools, teachers and pupils, with the average attendance of the pupils; (2) the number of teachers and pupils in normal and model schools for the training of teachers; (3) statistics of secondary schools so far as they are separately given and (4) the amount of public expenditure for education under the school law of each province.

In Table 1 the number of schools, teachers and pupils in the three Maritime provinces (Prince Edward Island, Nova Scotia and New Brunswick) includes both elementary and secondary schools or grades; in Nova Scotia the term "school" has a technical signification, being applied to a class with one teacher, irrespective of the number of classes in a school building. In Quebec and Ontario the statistics in Table 1 apply only to elementary schools; but again in the Northwest provinces and in British Columbia no line is drawn between the elementary and secondary grades. In Manitoba the sex of the pupils is not separately distinguished. Statistics of secondary education are only separately available for Quebec and Ontario. They are given in Tables 3 and 4. The model schools of Quebec are generally similar to the collegiate institutes and high schools in Ontario, except that the higher grades of the Quebec model schools do not prepare students for university matriculation, who enter from the academies.

Probably the most remarkable feature of these statistics is the extraordinary growth during the present century of the expenditure upon public education. In 1901, the first year of the century, the total expenditure for the purposes of public education in Canada was \$11,589,410; in 1914, the latest year for which complete figures for all the provinces are available, it was \$53,610,661, an increase of \$42,021,251, or 362 p.c.

NOTE.—From 1902 to 1905, inclusive, the Summary for Canada comprised the seven provinces of Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and British Columbia. The two provinces of Saskatchewan and Alberta were formed in 1905, and from 1906 all the nine provinces are included, with the exception of Manitoba for 1912, when no Education Report was issued by that province. In 1907 and 1908 the sex of the teachers in Saskatchewan was not given, and in Manitoba the sex of the pupils was not given for any of the years. In the Summary, therefore, these defects are indicated by printing the totals in italics.

E D U C A T I O N .

Higher Education in Canada.—Higher education in Canada is provided for by a number of universities and colleges, statistical particulars respecting which are summarized in Tables 6-11 from information furnished by each of the institutions mentioned. Of the universities, Toronto and McGill (Montreal) are the largest, and with Queen's University (Kingston, Ont.) take national rank. The oldest university in Canada, viz., King's College, Windsor, Nova Scotia, dates from 1789, and claims to be also the oldest university in His Majesty's Overseas Dominions. Several of the universities are affiliated to the older universities of the Mother Country, viz., Oxford, Cambridge and Dublin, whilst some of the smaller Canadian universities, as well as most of the colleges, are affiliated to either Toronto or McGill. In the West, provincial universities have been established for Manitoba at Winnipeg (1877), Saskatchewan at Saskatoon (1907), Alberta at Edmonton (1906) and British Columbia at Vancouver (1907).

Some of the universities and colleges are under the control of religious denominations as follows:

Anglican or Church of England in Canada.

King's College, Windsor, N.S.; University of Bishop's College, Lennoxville, Quebec; University of Trinity College, Toronto; Wycliffe College, Toronto; and Emmanuel College, Saskatoon.

Roman Catholic Church.

University of St. Francis Xavier's College, Antigonish, N.S.; Laval University, Quebec; Laval University, Montreal; University of Ottawa; St. Michael's College, Toronto.

Other Denominations.

Knox College, Toronto (Presbyterian); Mount Allison University, Sackville, N.B.; Victoria University, Toronto; and Wesley College, Winnipeg (Methodist); Acadian University, Wolfville, N.S.; McMaster University, Toronto; and Woodstock College, Woodstock, Ontario (Baptist).

For the 22 universities comprised in Table 7 the total teaching staff numbers 1,646, including 58 females, and the number of students is 16,545, of whom 3,744 are females.

The total value of the endowments for 15 of the universities in Table 8 amounts to \$18,492,407, and for 17 of the universities the total value of property in land and buildings amounts to \$25,918,245. It is apparent, however, that in furnishing the information requested, the line was not very clearly drawn between endowments and other property (land and buildings). In some cases the same figures appear to have been furnished under both headings. For 19 of the universities the total income amounts to \$3,785,580, of which \$769,537 are derived from investments, \$1,333,786 from government grants, \$860,976 from fees and \$564,231 from other sources. The total expenditure of the same universities amounts to \$3,603,565.

PRECIPITATION
DURING
APRIL TO AUGUST
INCLUSIVE
1915.

V.—CLIMATE AND METEOROLOGY.

THE WEATHER OF CANADA DURING THE YEAR 1915.

From the Monthly Weather Map of the Dominion Meteorological Service, Toronto.
JANUARY.

Temperature.—The mean temperature of the month was above the normal over the whole of the Dominion, except in the peninsula of Ontario, where the negative departure was from one to three degrees. The greatest positive departures were from four to six degrees in some sections of Saskatchewan and Alberta, also in Quebec and New Brunswick. From Lake Superior westward to the mountains, the precipitation was very light, and, with a few local exceptions, considerably below normal. From the Great Lakes eastward, departures from average were not as a rule pronounced, and were in some parts a little in excess, and at others there was a deficiency.

Precipitation.—Perhaps the most notable feature was the unusually heavy snow-fall in the Ontario peninsula. From Port Arthur westward to the Rocky mountains the depth of snow on the ground at the close of the month ranged between four and eight inches, while over the greater part of Ontario it was from 10 inches to two feet in depth. In Quebec and northern New Brunswick the depth was from seven to 18 inches, and in southern New Brunswick and Nova Scotia the covering was not more than one or two inches.

FEBRUARY.

Temperature.—The mean temperature of the month was considerably above the normal in all parts of the Dominion. From Lake Superior westward to the Rockies the positive departures, with the exception of northern Alberta, ranged between 10 and 17 degrees. In the vicinity of Edmonton and in British Columbia, the excess was from three to four degrees, and from the Great Lakes to the Maritime provinces from two to eight degrees.

Precipitation.—In British Columbia and over the greater part of the western provinces the precipitation was considerably below the normal, and in many sections of the prairies it was extremely light. In Ontario and Quebec departures from average were nowhere large, and were positive in some localities and negative in others. In the Maritime provinces, while the total amount was not particularly light, it was below the average in nearly all districts. In the western provinces, while bare ground was visible in some places at the close of the month, most of the country had a thin covering of snow, and in southern Alberta a depth of 10 to 12 inches was reported, with a crusted surface in some sections. In southern Ontario the fields were practically bare and only drifts remained; but in the eastern part of the province there was a covering in most places of two to eight inches. In the Georgian bay region and northern districts, however, the snow ranged from six inches to two feet in depth. In Quebec the depth was from one inch to eight inches in the western part of the province, and from 14 to 36 inches farther east. Snow was fairly deep in the interior of New Brunswick, but in the southern part of that province, and in Nova Scotia the ground was practically bare.

MARCH.

Temperature.—The mean temperature was considerably above average in the western provinces, and particularly so in the more northern districts, where in Saskatchewan and Alberta the positive departure exceeded 10 degrees. From Lake Huron eastward the departures from average were quite small, with a tendency towards being positive in the more northern parts, and negative in the south.

Precipitation.—There was a marked deficiency of precipitation in all parts of the Dominion, except Cape Breton and apparently the north Pacific coast, and most of that which occurred was in the form of snow, except at low levels in British Columbia. At the close of the month, in the northern districts of British Columbia and on the higher levels throughout the province, there was considerable snow on the ground, while the valleys in the southern part of the province were bare the greater part of the month. The western provinces were quite bare of snow, as were also southern and eastern Ontario, and the greater portion of the Maritime provinces. In New Ontario and in northern and eastern Quebec, the snow was still quite deep, and in northern New Brunswick there was a covering of several inches.

CLIMATE AND METEOROLOGY.

APRIL.

Temperature.—The mean temperature of April was higher than the average throughout the Dominion, except in the southern parts of the Maritime provinces. The widest positive departure occurred in the western provinces, where in Saskatchewan it was 12 degrees, and in Manitoba 10 degrees, whence eastward it diminished to between five degrees and eight degrees in Ontario, and to one degree in northern New Brunswick, and to 0 degree or one degree negative in more southern portions of the Maritime provinces. In British Columbia a positive departure of seven degrees in the upper mainland diminished to about one degree near the coast.

Precipitation.—The precipitation was less than average in nearly all parts of the Dominion, except New Brunswick, central Nova Scotia and the more northern districts of Alberta and Saskatchewan. The deficiency was greatest in the west, between Swift Current and Medicine Hat, where there was neither rain nor snow, and the largest excess occurred in the Maritime provinces between St. John and Halifax; on the 29th rain began in the latter district and continued to the end of the month.

MAY.

Temperature.—The temperature was a little above the average from the Pacific coast to the eastern limit of the province of Manitoba, and below the average from Ontario to the Maritime provinces, the deficiency being well marked everywhere. The chief positive departures were two degrees at Barkerville, Medicine Hat, Battleford and Prince Albert, and the chief negative departures four degrees at White River, Ottawa, Father Point, Chatham, N.B., and Charlottetown, and three degrees at Southampton, Port Stanley, Kingston and Montreal.

Precipitation.—In British Columbia, in Cariboo, the precipitation exceeded the usual amount, elsewhere it did not differ much from the average quantity. In the western provinces, in nearly all portions of Saskatchewan, also in the extreme southern part of Alberta, it was well above the normal, but in Alberta, from Calgary northward and over Manitoba, there was quite a deficiency generally. Throughout Ontario and in the western part of Quebec, the precipitation was light and much below the average, whereas in eastern Quebec and the Maritime provinces it was heavy and much above the average.

JUNE.

Temperature.—The mean temperature of the month was below the normal over the greater part of the Dominion, the only exceptions being some southern sections of British Columbia and a few counties in the eastern portion of Quebec where the normal was slightly exceeded. Negative departures in many places were fairly pronounced, amounting to about six degrees in Manitoba, and ranging between one and four degrees in Alberta, Saskatchewan, Ontario and the eastern districts of the Maritime provinces.

Precipitation.—The outstanding feature of the precipitation during June was an excessive rainfall in Alberta, and a marked deficiency in the St. Lawrence valley and some small districts in Ontario near the west end of lake Ontario. In other parts of the Dominion, departures from the normal amounts were not great.

JULY.

Temperature.—The temperature was below the average in all portions of the Dominion, except a few isolated localities in Ontario and Quebec, where the normal was just maintained. In many portions of the country the negative departure was pronounced; this was especially the case over the western provinces, and in the extreme eastern portions of the Maritime provinces, the amount varying from three to eight degrees in the former, and from three to seven degrees in the latter districts.

Precipitation.—The rainfall in British Columbia was much above the average amount in Cariboo and inland locally, but less than the usual quantity elsewhere. In Alberta and Saskatchewan it was above the average almost everywhere, the excess in central and southern Alberta equalling one-third to one-half more than the general fall. In the vicinity of Battleford it was also one-third more than usual. In Manitoba the fall was average in the western, but only about half the normal in the eastern portion. In Ontario it was well below the average, except in the Peninsula, where it was above, strikingly so at Toronto. Quebec was mostly dry, being from

WEATHER OF CANADA DURING 1915.

two to three inches below the normal over the larger portion of the province. In the Maritime provinces heavy rainfalls were recorded from Chatham to St. John, including the Fredericton valley, the excess being 2.1 inches at Chatham, 1.6 inch at St. John, and 1.5 inch at Fredericton. However, in the provinces generally, the precipitation did not attain to the usual normal quantity, and Yarmouth recorded a deficit of 2.6 inches.

AUGUST.

Temperature.—The temperature was above the average from the British Columbia coast line to the western portion of Lake Superior; elsewhere in the Dominion it was below the average, except in a small portion of Quebec and the Maritime provinces, where it was from the average to one degree above. The chief positive departures were eight degrees at Medicine Hat, seven at Edmonton, six at Battleford, and five at Calgary and Vancouver, and the chief negative departures were three degrees at White River, Southampton and Ottawa.

Precipitation.—The rainfall for August was remarkable for the excessive amount which fell over all portions of Ontario, except in very far northern districts. The fall varied from five to nearly 10 inches, the record being broken in many localities. On the other hand, outside of a rainfall much above the average quantity on the south and east coasts of Nova Scotia, and with an amount slightly above the normal at a few isolated places in Quebec, northern Alberta and the interior of British Columbia, the rainfall was everywhere deficient, especially in the western provinces, where the negative departure varied from one inch to over two inches.

SEPTEMBER.

Temperature.—The mean temperature of the month was below average from Lake Superior to the Pacific, by from one degree to four degrees, and it was above average from Lake Huron to the Maritime provinces by approximately the same amount. The extremes were quite pronounced in all the provinces, except British Columbia, there having been several days with temperatures between 80 and 90 degrees, and one or more days with unusually low temperatures and early morning frosts.

Precipitation.—The rainfall was considerably in excess of the average in southern Alberta, southeastern Saskatchewan, over the greater part of Manitoba, and in western and northwestern Ontario, and in all these districts rain fell on an unusually large number of days, with the maximum number in southern Manitoba. In Quebec, exclusive of the Ottawa valley, and in northern New Brunswick the rainfall was also excessive, but this was due to the large fall accompanying the storm of the 26th, rather than to wet days, which were not unusually numerous. In other parts of the Dominion, including all British Columbia, northern Alberta and western Saskatchewan, eastern Ontario and nearly all parts of the Maritime provinces, the rainfall was less than the average amount.

OCTOBER.

Temperature.—The mean temperature of the month was above average in all parts of the Dominion, exclusive of the British Columbia coast line and the extreme southwestern portion of Nova Scotia; also perhaps in far northern Manitoba and Patricia. The largest positive departures from normal were from three degrees to four degrees in eastern Ontario and Quebec, and about six degrees in the southern parts of Alberta and Saskatchewan.

Precipitation.—The rainfall was less than average throughout the western provinces and in the more southern and eastern portion of Ontario; also in the central portions of the Maritime provinces. Over British Columbia generally there was a marked excess of the average, except in the normally dry belts. In northern Ontario and over the larger part of Quebec and in southern Nova Scotia, the rainfall was slightly in excess of the average.

NOVEMBER.

Temperature.—The mean temperature of the month was above normal over the Dominion generally, but in northern Alberta and in some sections of Manitoba it was above average, and over the greater portion of British Columbia it was from

CLIMATE AND METEOROLOGY.

one degree to seven degrees below. Positive departures of three degrees to four degrees were recorded in southern Alberta, and of two degrees to five degrees from Lake Superior eastward.

Precipitation.—The precipitation was below the normal over the larger portion of the Dominion. On the coast of British Columbia, however, the total fall ranged from 4.5 inches at Victoria to nearly 12 inches at Prince Rupert, and over the greater part of Nova Scotia it was also quite heavy, amounting to 6.6 inches at Halifax, and 8.4 inches at Sydney, which is considerably more than the normal for that district. In the Prairie provinces the comparatively light fall was mostly in the form of snow, but from the Great Lakes eastward, while rain constituted the greater portion of the precipitation, snow in varying quantities was recorded in nearly all sections. In southern British Columbia and along the coast there was little or no snow on the ground at the close of the month, but in some interior districts in the northern portion of the province there was a depth of 10 inches. In southern Alberta the ground was bare, while over Saskatchewan and Manitoba, the depth varied between one and eight inches. In the northern districts of Ontario and Quebec there was a depth of one to six inches, and in the counties contiguous to lake Huron there was also a thin covering. Over the greater portion of southern and eastern Ontario, and southern Quebec, however, the ground was bare. In New Brunswick the snow that had fallen had disappeared before the 30th, while in Nova Scotia little or none fell during the month.

DECEMBER.

Temperature.—The mean temperature of December was above average in all parts of the Dominion, excepting southwestern Ontario, and the larger part of British Columbia. The widest positive departures occurred in Quebec and New Brunswick, in many parts of which provinces the excess was between six degrees and nine degrees, while in Alberta and western Saskatchewan the excess was from four degrees to six degrees. The negative departures ranged between one and three degrees in the peninsula of Ontario, and were about the same in northern British Columbia.

Precipitation.—At the close of the month the ground was covered with snow in nearly all parts of the Dominion. In British Columbia, on the mainland, the depth ranged from one inch in the vicinity of Vancouver to two feet in the northern interior districts. There was little or no snow in some southern sections of Alberta, and throughout that province the covering was quite light, but farther eastward the depth increased to 10 or 14 inches in southeastern Saskatchewan and Manitoba. In Ontario there was a depth of nearly two feet in some districts in the northern part of the province, but farther southward this gradually diminished to a few inches near Lakes Erie and Ontario. The province of Quebec had a covering of from seven to twenty inches, while in the Maritime provinces there was a depth of only one to five inches. There were no pronounced differences from the normal precipitation in any of the provinces.

TEMPERATURE AND PRECIPITATION.

TEMPERATURE.—At the Stations of the Dominion Meteorological Service the highest and lowest temperature in each 24 hours, termed respectively the maximum and the minimum, are recorded by self-registering thermometers. For any month the sum of the daily maxima, divided by the number of days of the month, is the mean maximum temperature of that month. The mean minimum temperature is obtained in a similar manner. The half-sum of the mean maximum and the mean minimum is called the mean temperature. The averages of these results for any particular month over a period of years are the average means for that period and are used as normal means or temperatures of reference. The highest and lowest temperatures recorded during the whole period of years are termed the extreme maximum and extreme minimum respectively. These latter figures are of course to be regarded as extraordinary, the more unlikely to recur the longer the period from which they have been derived. Temperatures below zero have the minus sign (—) prefixed.

PRECIPITATION.—Under the collective term "precipitation" is included all moisture which has been precipitated from the atmosphere upon the earth: rain,

of experiments in melting and measuring snow having been collated, the rule was deduced that a given fall of snow will, in melting, diminish on the average to one-tenth of its original depth. This rule is used in practice. All solid forms of precipitation other than snow are included in the tables as rain.

VI.—PRODUCTION.

In this section are included the statistics of agriculture, forestry, fisheries, minerals and manufactures.

AGRICULTURE.

Field Crops, 1910-1915.—In Table 1 are presented for Canada and by provinces estimates of the area, yield, quality and value of the principal field crops for each of the years 1910 to 1915, with averages for the five years 1910 to 1914. In this table the areas for 1910 and 1911 are figures of the Census of 1911, the areas of field crops for both 1910 and 1911 having been then collected. For 1912, 1913, 1914 and 1915 the areas are estimated by application to the figures of the previous year in each case of average percentages compiled from the reports of correspondents. The total yields of 1910 represent the addition of the figures furnished to the census enumerators by individual farmers; but for the other five years the yields are obtained by multiplication of the areas by the average yields per acre as estimated by correspondents. For 1910 the average yields per acre are obtained by division of the total yields by the total acreages, the data for both factors having been collected by the Census of 1911. For each of the other years the yields per acre represent the averages of the figures furnished by correspondents. The total values are derived from the averages per unit, as furnished by correspondents, multiplied by the total quantities. The total value of all the field crops for 1910, thus arrived at, is considerably in excess of the total value for the same year as returned by the Census. The two sets of figures rest, however, upon different bases. The census figures of 1910 were collected in June, 1911, and represent the total values supplied by farmers of products, whether sold or consumed on the farm. The estimates in Table 1 are computed from the average local market prices supplied by correspondents in December, 1910.

Harvest of 1915.—The year 1915 will be memorable for the most abundant grain harvest ever reaped in Canada up to that time. This result was due to a remarkable combination of circumstances. The small grain harvest of 1914, ripened early and expeditiously threshed and marketed under favourable weather conditions, enabled the western farmers to complete an unusually large proportion of fall ploughing in readiness for the next year's crop. In Ontario the acreage sown to fall wheat was increased by over 16 per cent, as compared with the previous year, and the increase of fall wheat for all Canada was over 9 per cent. A mild winter and spring brought the fall wheat crop through with considerably less loss from killing than usual. The spring opened early, and as a general rule the conditions for seeding

PRODUCTION.

were favourable. With the prospects of high prices for wheat and other cereals, and responding to appeals for increased production on patriotic grounds, the farmers of Canada took the fullest advantage of their opportunities, with the result that the area sown to wheat for the harvest of 1915 was not only the largest on record in Canada, but exceeded the area sown in the previous year by 1,964,400 acres, or nearly 18 per cent. Finally, the growing season was uniformly favourable, and the average yields per acre of all the principal cereals in Canada were higher than in any previous year on record. For wheat, the average yield per acre was close upon 29 bushels, or eight bushels more than the previous record of 21 bushels in 1913. Owing to the heavy rains of August in Ontario, Quebec and the Maritime Provinces, the yield of potatoes turned out to be very poor, the average of 130.81 bushels to the acre being lower than in any previous year except 1910, when the average was 119.36 bushels. As shown in Table 3, the total area estimated to be sown to field crops in Canada for 1915 was 37,063,455 acres, as compared with 35,102,175 acres, the sown area, and 33,436,675 acres, the harvested area, in 1914.

Yield of Grain Crops.—As a result of the returns of the average yield per acre, made after threshing, the total yields of the grain crops for the season of 1915, compared with 1914, were in bushels as follows. Wheat, 376,303,600, as against 161,280,000 in 1914; oats, 520,103,000, as against 313,078,000; barley, 53,331,300, as against 36,201,000; rye, 2,394,100, as against 2,016,800; peas, 3,478,850, as against 3,362,500; beans, 723,400, as against 797,500; buckwheat, 7,865,900, as against 8,626,000; flaxseed, 10,628,000, as against 7,175,200; mixed grains, 17,523,100, as against 16,382,500 and corn for husking, 14,368,000, as against 13,924,000 bushels. The average yields per acre in 1915 are, in bushels, as follows, the figures placed in brackets representing the yields of 1914 for comparison: Fall wheat, 29.41 (21.41); spring wheat, 28.93 (15.07); all wheat, 28.98 (15.67); oats, 45.76 (31.12); barley, 35.33 (24.21); rye, 21.32 (18.12); peas, 17.73 (17.64); beans, 16.70 (18.20); buckwheat, 22.88 (24.34); flaxseed, 13.18 (6.62); mixed grains, 37.54 (35.36); and corn for husking, 56.72 (54.39).

Yield of Root and Fodder Crops.—The total estimated yield of potatoes in 1915 was 62,604,000 bushels from 478,600 acres, an average yield per acre of 130.81 bushels. In 1914 the corresponding figures were 85,672,000 bushels from 475,900 acres, an average yield per acre of 180.02 bushels. In Ontario the average yield per acre was not more than 92.66 bushels, almost the lowest yield of potatoes on record for the province. In the other provinces the potato yield was also poor, excepting in Alberta and British Columbia. In Alberta the total yield was 5,155,000 bushels from 27,300 acres, an average of 188.84 bushels per acre, and in British Columbia the yield was 3,956,000 bushels from 16,000 acres, an average of 247.28 bushels. In both provinces the yield per acre was larger than in any recent year. In Alberta the yield was 211.64 bushels in 1912, and in British Columbia it was 252.31 bushels in 1911. Turnips and other roots for the whole

AGRICULTURE.

of Canada yielded 64,281,000 bushels from 172,700 acres, as compared with 69,003,000 bushels from 175,000 acres in 1914, the yield per acre being 372.21 bushels in 1915, and 394.30 bushels in 1914. Of hay and clover the yield in 1915 was 10,953,000 tons from 7,875,000 acres, or 1.39 ton per acre; in 1914 the corresponding figures were 10,259,000 tons from 7,997,000 acres, a yield per acre of 1.28 ton. Alfalfa yielded 261,955 tons from 92,685 acres, as compared with 218,360 tons from 90,315 acres in 1914, the average yield per acre being 2.83 tons, compared with 2.42 tons. Fodder corn yielded 3,429,870 tons from 343,400 acres, as compared with 3,251,480 tons from 317,000 acres in 1910, the average yield being 10 tons in 1915 and 10½ tons, in 1914. The yield of sugar beets was 141,000 tons from 18,000 acres, compared with 108,600 tons from 12,100 acres, the yields per acre being 7.83 tons in 1915 and 8.98 tons in 1914.

Value of Field Crops—The values are estimated from local market prices as returned by the crop-reporting correspondents of the Census and Statistics Office. For all wheat, in 1915, the average price per bushel for the whole of Canada was 39 cents less than that of 1914 and 8 cents more than that of the quinquennial average. The total values of the principal grain crops of 1915 were as follows:—Wheat \$312,569,400, oats \$176,894,700, barley \$26,704,700, rye \$1,899,900, peas \$5,730,700, beans \$2,206,800, buckwheat \$5,913,000, flaxseed \$15,965,000, mixed grains \$10,034,700, corn for husking \$10,243,000. Including the root and fodder crops, the total value of the field crops of Canada in 1915 amounted to \$797,669,500, comprising grain crops \$568,161,900, potatoes and sugar beets \$36,739,500 and fodder crops \$192,768,100.

Quality of Grain Crops.—The quality of the grain crops in 1915, as determined by the weight in lb. per measured bushel, was, with the exception of one or two crops, superior to that of 1914 and was also superior to the average of the five years 1910–1914. The weights per bushel for 1915 were as follows: Fall wheat 59.71 lb., spring wheat 60.31 lb., all wheat 60.19 lb., oats 36.61 lb., barley 48.26 lb., rye 56.32 lb., peas 60.74 lb., beans 59.61 lb., buckwheat 48.02 lb., flax 55.28 lb., mixed grains 44.98 lb. and corn for husking 56.32 lb.

Grain Harvest in Northwest Provinces.—Table 2 shows that in the three Northwest provinces of Manitoba, Saskatchewan, and Alberta, the production of wheat in 1915 was estimated at 342,948,000 bushels, as compared with 140,958,000 bushels in 1914; of oats at 334,840,600 bushels, compared with 150,843,000 bushels; of barley at 35,317,200 bushels, compared with 19,535,000 bushels and of flax at 10,559,000 bushels, compared with 7,083,000 bushels. The wheat production of 1915 in Manitoba was 96,425,000 bushels from 3,342,900 acres, in Saskatchewan 195,168,000 bushels from 6,838,100 acres and in Alberta 51,355,000 bushels from 1,563,700 acres.

NOTE.—In 1914 the total areas estimated to be sown to field crops amounted to 35,102,175 acres; but the productive surface in the Northwest provinces was reduced by the following areas of crops which failed in consequence of the drought: Wheat 723,100 acres, oats 753,000 acres, barley 102,000 acres, flax 79,000 acres and sugar beets 2,000 acres in Alberta, and 1,400 acres in Ontario.

Farm Live Stock.—Table 4 gives the numbers of each description of farm live stock (horses, cattle, sheep and swine) for the years 1911 to 1915. For 1911, the numbers are as recorded by the Census after compilation of returns collected from every occupier on June 1. For the other years the figures are compiled from the returns on June 30 by selected correspondents of estimated percentage increases or decreases as compared with the previous year.

Values of Farm Live Stock and of Wool.—Table 5 shows the average values per head of farm animals, as estimated from the reports of correspondents of the Census and Statistics Office for the year 1915, as compared with the years 1908, 1909, 1910 and 1914. Horses and cattle other than milch cows are divided according to age, and the unit value for swine is 100 lb. live weight. The table gives also an estimate of the value per lb. of unwashed and washed wool. The value of horses is somewhat less than that of 1914; but the prices of cattle showed an increase, especially for milch cows. Swine were appreciably dearer, except in Nova Scotia and New Brunswick, where they were about the same as in 1914. Sheep too rose in price, and there was a notable increase in the value of wool, the average for Canada being 28 cents per lb. for unwashed and 38 cents per lb. for washed wool, as compared with 19 and 26 cents respectively in 1914. Table 6 shows the numbers

[Continued on page 175]

AGRICULTURE.

[Continued from page 171]

in June and the values in December of farm live stock in 1914 and 1915. The figures are arrived at by multiplication of the numbers, as estimated in June, by the average values per head as calculated from the returns at the end of January. They have not the exactitude of census returns, and can only be regarded as approximate.

Values of Farm Land.—Table 7 shows the average values per acre of occupied farm lands in Canada, as estimated by correspondents in each of years 1908, 1909, 1910, 1914 and 1915. For the whole of Canada the average value of farm land held for agricultural purposes, whether improved or unimproved, and including the value of dwelling houses, farms, stables and other farm buildings, was approximately \$39 per acre. In 1914 the average value was returned as \$38.41. By provinces the averages per acre range from \$22.48 in New Brunswick to about \$125 in British Columbia, the values for the other provinces being as follows: Prince Edward Island, \$37.64; Nova Scotia, \$28; Quebec, \$51.36; Ontario, \$52.49; Manitoba, \$30.36; Saskatchewan, \$24.20 and Alberta, \$23.15. In British Columbia the higher average is due to orcharding and fruit growing.

7.—Average Values per acre of Occupied Farm Lands in Canada, as estimated by Correspondents, 1908, 1909, 1910, 1914 and 1915.

Wages of Farm Help in Canada.—The wages paid for farm labour in 1914 fell to a lower point than in any recent year. The causes for this decrease were the small crops of 1914, for the gathering of which fewer hands were required, the release of other labourers on the outbreak of the war and the increased cost of board. In 1915, owing to the abundant harvest and the effects of recruiting for the army, there was some reaction, and the average wages paid were more than in 1914 if not quite equal to those paid in 1910, the date of the previous inquiry. As shown by Table 8, for the Dominion the average wages per month during the summer, including board, were \$37.10 for male and \$20.20 for female help, as compared with \$35.55 and \$18.81 in 1914. For the year 1915, including board, the average wages were \$341 for males and \$200 for females, as compared with \$323.30 and \$189.35 in 1914. The average value of board per month works out to \$14.57 for males and \$11.45 for females, the corresponding figures of 1914 being \$14.27

PRODUCTION.

and \$11.24. Average wages per month were lowest in Prince Edward Island, viz., \$26.67 for males and \$14.59 for females; in Nova Scotia the averages were \$32.95 and \$15.85; in New Brunswick \$33.73 and \$16.11; in Quebec \$33.08 and \$16.44; in Ontario \$31.09 and \$17.12; in Manitoba \$45.18 and \$27.29; in Saskatchewan \$42.22 and \$23.81; in Alberta \$44.02 and \$24.25 and in British Columbia \$49.37 and \$31.21.

AGRICULTURE.

Dairy Products.—Measurement of the progress of dairying in Canada is possible by comparing the results of the census of dairy industries taken in 1911 with those of the previous census of 1900 and of the postal census of dairy products taken in 1907. This is done in Table 9, which shows by provinces the number of factories and creameries and the quantity and value of cheese and butter produced for each of the years 1900, 1907 and 1910. But the figures in this table relate only to the production of factories and creameries and do not include butter and cheese made on the farm. The production of home-made butter and cheese in Canada in the census years 1870 to 1910 is shown in Table 10. For 1900 there is no record of the quantities of home-made cheese, and the values of dairy products for that year, totalling \$66,470,953 and including milk and cream sold to factories and cheese and butter, were not separately distinguished. By adding together the quantities and values of the factory and home-made butter we get a total butter production in Canada for 1910 of 201,808,365 lb. (home-made butter 137,110,200 lb. and factory butter 64,698,165 lb.), as compared with 141,409,815 lb. in 1900 (home-made butter 105,343,076 lb. and factory butter 36,066,739 lb.), with a value in 1910 of \$45,915,342 (home-made butter \$30,269,497 and factory butter \$15,645,845). The increase in quantity is at the rate of 42.71 p.c. Of cheese the total production in 1910 was 201,275,297 lb. (factory cheese 199,904,205 lb. and home-made cheese 1,371,092 lb.), the value being \$21,741,212 (factory cheese \$21,587,124 and home-made cheese \$154,088).

AGRICULTURE.

Condensed Milk.—In 1900 there were four condensed milk factories: two in Nova Scotia, one in Ontario and one in Prince Edward Island. The value of their products was \$269,520. In 1907 there were seven of these factories, the three additional establishments being situated, one in Ontario and two in Quebec. These produced 10,334,485 lb. of condensed and evaporated milk and 1,841,650 lb. of condensed cream, the total value of the products being \$910,842. Table 11 shows by provinces for the year 1910 the number of condensed milk factories and the quantity and value of the products. The value of condensed milk, etc., was thus \$1,814,871 in 1910, as compared with \$269,520 in 1900.

The total value of factory cheese, butter and condensed milk was \$39,047,840 in 1910, as compared with \$29,731,922 in 1900, which is an increase in the decade of 31.33 p.c. The average selling price of cheese in 1910 was 10.80 cents, as compared with 10.06 cents in 1900, and of butter 24.18 cents, as compared with 20.08 cents.

Cold Storage of Perishable Products.—Under the Cold Storage Act, 1907 (6-7 Edw. VII, c. 6), subsidies are granted by the Dominion Government towards the construction and equipment of cold storage warehouses open to the public, the Act and regulations made thereunder being administered by the Department of Agriculture.¹ Table 12 gives a list of the cold storage warehouses in Canada, with refrigerated space amounting to 24,309,372 cubic feet, of which 4,553,507 cubic feet apply to warehouses subsidized under the Act.

AGRICULTURE.

Production of Flax Fibre in Ontario.—The estimated area of flax grown for fibre in southern Ontario during 1915 was about 4,000 acres. From this area the production of flax fibre was about 800 tons, which at the average price of approximately 20 cents per lb., or \$400 per ton, was of the total value of \$320,000. In addition, 80 tons of tow at \$35 per ton realized \$2,800. The same crop also produced seed at the average rate of nearly 12 bushels per acre, or a total yield of 48,000 bushels, the value of which, at the average rate of \$1.60 per bushel, was \$76,800. About 30 per cent. of the total production of fibre is shipped to Ireland, the rest being exported to New England States.

Beetroot Sugar.—It is estimated by the Census and Statistics Office that in 1915 18,000 acres of sugar beetroots were grown for manufacturing purposes in Canada and in the province of Ontario. In 1914 the corresponding area was 12,100 acres, of which 12,000 acres were in Ontario and 100 acres in Alberta. The total yield of sugar beets in Canada in 1915 was 141,000 tons, as compared with 108,600 tons in 1914, the average yield per acre being 7.83 tons, as compared with 8.98 tons in 1914. The total value of the crop in 1915 was \$775,500, as compared with \$651,000 in 1914, the average price per ton being \$5.50 in 1915 and \$6 in 1914. As the result of special inquiries addressed to the three Sugar Beet factories of Canada, revised figures of the quantities of refined sugar manufactured from Canadian grown sugar beets during the five years 1911 to 1915 have been returned as follows:—

	lb.
1911.....	21,329,689
1912.....	26,767,287
1913.....	26,149,216
1914.....	31,314,763
1915.....	39,515,802

For 1912 a small part of the total production is estimated. One of the factories did not operate during the year 1915.

Tobacco.—In 1910 the total production of tobacco in Canada, as returned by the Census of 1911, was 17,632,342 lb. from 18,928 acres. Since this date no definite statistics of the area and yield of tobacco in Canada have been published. The acreage and yield of tobacco in Quebec and Ontario in 1913, 1914 and 1915 are estimated as in Table 13.

13.—Estimated Areas and Yields of Tobacco in Canada, 1913-1915.

Provinces.	1913.	1914.	1915.	1913.	1914.	1915.	1913.	1914.	1915.

The season for tobacco in 1915 was rather cool and very wet, particularly in Ontario, where the White Burley crops suffered greatly from the Tobacco Root Rot, *Thielavia basicola*. However, the Virginia

PRODUCTION.

types, which as a rule are grown on lighter soils and on ridges, well drained, gave better crops than in 1914. The acreage in bright tobacco was largely increased in 1915. In Quebec the summer was a little cooler than usual, and in some districts rather wet. The crop was about normal in northern districts. There was a little root rot in the southern districts, which reduced the yield materially. Both in Quebec and Ontario the autumn was exceptionally favourable to the curing of the tobacco crop in the barns. All the tobaccos which were harvested in good time were practically cured by the end of October.

Consumption of Meat in Canada.—In 1907 the Health of Animals Branch of the Department of Agriculture began the organization of a meat inspection service for Canada in accordance with the provisions of the Meat and Canned Foods Act (6-7 Edw. VII., c. 27). Under this Act the inspection of all meat and canned foods was made obligatory in respect of establishments engaged in the interprovincial trade or in exporting to foreign countries. Meats and foods other than those in inspected establishments and consumed within the same province as that in which the animals are slaughtered do not at present come within its provisions. The Act has now been in operation for nine years, and records have been annually kept of the animals slaughtered in the establishments inspected. Table 14 indicates therefore the movement in the production of meat in Canada during the last nine years. It shows the number of cattle, sheep and swine slaughtered under the Act in each year from 1907-08 to 1915-16.

14.—Number of Cattle, Sheep and Swine slaughtered under the Meat and Canned Foods Act, 1907.

¹Eight months.

Per Capita Consumption of Meat.—It has usually been assumed that the meat inspected under the Meat and Canned Foods Act represents upon average about half of the total meat production of Canada; but it would hardly be safe to accept this proportion in any endeavour to arrive at the per capita consumption of meat. The question has been investigated by officers of the Meat Inspection Division of the Health of Animals Branch, and calculations, based upon the census returns of animals slaughtered and sold off farms in 1910, upon the exports and

A G R I C U L T U R E .

imports of meat for the same year and upon the meat inspection statistics, show that in 1910 the total production of beef for consumption in Canada was about 426,451,000 lb., of mutton 63,582,000 lb. and of pork 466,955,000 lb., or a total for the three descriptions of 956,988,000 lb. For an estimated population in 1910 of seven millions the per capita consumption in Canada works out to 61 lb. of beef, 9 lb. of mutton and $66\frac{3}{4}$ lb. of pork or $136\frac{3}{4}$ lb. of all kinds of meat.

Similar estimates are available for a few other countries, including the United Kingdom, the United States, France and Germany, and are given in Table 15, together with the estimates for Canada for the census years 1900 and 1910.

15.—Per Capita Consumption of Meat in the United Kingdom, the United States, Canada, France and Germany.

Countries.	Years.	Beef and Veal.		Mutton and Lamb.		Pork, including Lard.		All kinds.	
		lb.	p.c.	lb.	p.c.	lb.	p.c.	lb.	p.c.
United Kingdom...	1906-08	60	50	26	22	33	28	119	100
United States....	1909	$87\frac{1}{2}$	51	$6\frac{1}{2}$	4	78	45	172	100
Canada.....	1900	54	50	11	10	44	40	109	100
“.....	1910	61	44	9	7	67	49	137	100
France.....	1904	45	56	9	11	26	33	80	100
Germany.....	1909	$43\frac{1}{2}$	39	$2\frac{1}{2}$	2	67	59	113	100

The figures for France were quoted in a paper by Sir R. H. Rew, K.C.B., Assistant Secretary of the British Board of Agriculture,¹ and those for the United Kingdom were calculated by Mr. R. H. Hooker of the same Board.² For the United States the authority is Mr. John Roberts of the U. S. Department of Agriculture, who also quotes the estimates of the total per capita consumption of all kinds of meat in other countries as follows: Argentina 140 lb.; Denmark 76 lb.; Norway and Sweden 74 lb.; Belgium 70 lb.; Austria-Hungary 64 lb.; Russia 50 lb. and Spain 49 lb.³

The Canadian figures may be compared with the report of the Labour Department on retail prices. The average per capita quantities of meat reported as consumed by typical workmen's families of five persons, in localities in Canada having a population of 10,000 or over, and with an annual average income of \$800 per family, amount for the year to 52 lb. of beef, $10\frac{1}{4}$ lb. of mutton and 62 lb. of pork, or a total of 124 lb. of all kinds. These figures are not far below those

¹Observations on the Production and Consumption of Meat and Dairy Products. By R. H. Rew. Journal of the Royal Statistical Society, London. Vol. LXVII, 1904, pp. 413-427.

²Meat Supply of the United Kingdom. By R. H. Hooker, M.A., Journal of the Royal Statistical Society, London, Vol. LXXII, 1909, p. 333.

³Slaughter and Consumption of Food Animals in the United States for the year 1909. By John Roberts. 28th Annual Report of the Bureau of Animal Industry, U.S. Department of Agriculture, Washington, 1911, pp. 253-267.

P R O D U C T I O N .

given in Table 15; they would naturally be less, because applicable only to families with comparatively small incomes and to small quantities of meat, instead of to whole carcasses.

Fur Farming in Canada.—An industry that has made great progress in Canada during the last few years is that of fur farming, which is carried on principally in the Maritime provinces, especially Prince Edward Island. According to the Report for 1913 of the Prince Edward Island Department of Agriculture, the number of fox ranches in the Island in that year was 277, and the number of foxes in captivity was 3,130. The total value of the fox-breeding industry in the Island at December 31, 1913, was estimated at \$15,186,150. Information respecting the industry is given in Reports issued by the Commission of Conservation, especially a Report on Fur Farming in Canada by J. WALTER JONES, B.S.A., 2nd edition, 1914.

Agricultural Instruction Act.—Under the Agricultural Instruction Act, 1913 (3 Geo. V, c. 5), appropriations are annually payable by the Dominion Government to each of the Provincial Governments of Canada for the encouragement of agriculture "through education, instruction and demonstration carried on along lines well devised and of a continuous nature" and for the purpose of assisting in the work of veterinary colleges established in the provinces. The provincial allocation of the payments under this Act for the four years 1913-14 to 1916-17 are shown in Table 16. A report on the Agricultural Instruction Act for the year 1914-15, dated December 31, 1915, was published as Sessional Paper No. 15c, 1916.

16.—Allocation of Payments to Provincial Governments under the Agricultural Instruction Act, 1913-14—1916-17.

Stocks of Wheat in Canada.—With the object of ascertaining as accurately as possible the total quantity of wheat in Canada at the end of March, 1916, schedules were issued by the Census and Statistics Office to the managers of elevator, flour mill and railway companies asking them to state the actual quantities of wheat and wheat flour on hand or in transit on the morning of Friday, March 31, 1916. The

AGRICULTURE.

quantity of wheat in the terminal elevators at Fort William and Port Arthur and at the interior terminal elevators on March 31 was furnished by the Board of Grain Commissioners. For the quantity of wheat estimated to be in farmers' hands on March 31 use was made of the replies to the ordinary annual schedule addressed to crop-reporting correspondents. In Table 17 the results are given of the compilation of the returns received, these being also compared with the results of the special inquiry of the same kind which was carried out in 1915 as for the date of February 8, 1915.

17.—Stocks of Wheat in Canada on February 8, 1915, and March 31, 1916.

In farmers' hands.....	29,554,000	86,854,000
Totals.....	79,130,593	197,050,753

PRODUCTION.

Allowing one million bushels in both years for quantities not included in the returns, it may be stated that in round numbers the quantity of wheat in Canada on March 31, 1916, was about 198 million bushels, as compared with about 80 million bushels on February 8, 1915.

Average Rate of Seeding per Acre.—With a view of obtaining definite statistical data as to the average rates of seeding employed for the principal cereals throughout Canada, the crop-reporting correspondents of the Census and Statistics Office were requested to state, to the nearest quarter fraction, the average rate of seeding adopted in their respective districts for wheat, rye, barley, oats, peas and mixed grains, during the season of 1915. The results are shown in Table 18.

18.—Average Rate of Seeding per acre of the Principal Cereals in Canada, 1915.

Alberta.....	1 $\frac{1}{2}$	1 $\frac{1}{2}$	2	2 $\frac{1}{2}$	1 $\frac{1}{2}$	2
British Columbia.....	1 $\frac{1}{2}$	1 $\frac{1}{4}$	2	2 $\frac{1}{2}$	2	2 $\frac{1}{2}$
Canada	1 $\frac{1}{2}$	1 $\frac{1}{4}$	2	2 $\frac{1}{2}$	2 $\frac{1}{4}$	2 $\frac{1}{2}$

For fall wheat the average rate of seeding in Ontario, as based upon 230 replies, is 1 $\frac{3}{4}$ bushel, as in the case of spring wheat, and in Alberta the average based upon 20 replies is 1 $\frac{1}{4}$ bushel. In other provinces, where fall wheat is grown to a less extent, the average rate of seeding per acre, based upon fewer replies, is for Quebec 1 $\frac{3}{4}$ bushel, for Manitoba 1 $\frac{1}{4}$ bushel, for Saskatchewan 1 $\frac{1}{2}$ bushel and for British Columbia 1 $\frac{1}{2}$ bushel. For the whole of Canada the average rate per acre for the seeding of fall wheat is 1 $\frac{3}{4}$ bushel.

AVERAGE MONTHLY PRICES PER BUSHEL OF CANADIAN WHEAT, BARLEY, OATS AND FLAX, 1914 AND 1915.

The horizontal lines indicate prices from 30 cents to \$2.16. The two higher black wheat curves indicate the average monthly prices per bushel of wheat (No. 1 Nor.) (a) at Winnipeg and Fort William and (b) at Mark Lane, London, England, the lower red curve of Barley (No. 3, C.W.) at Winnipeg and Fort William, the two lower black curves of Oats (No. 2, C.W.) (a) at Winnipeg and Fort William and (b) at Mark Lane, London, England, and the higher red curve of Flax (No. 1, N.W.C.) at Winnipeg and Fort William. (Wheat 60, Barley 48, Oats 34, and Flax 56 lb. per bushel.)

AGRICULTURE.

Prices of Canadian Agricultural Produce.—Tables 19-23 record the prices quoted during 1915 for Canadian agricultural produce. Tables 19 and 20, furnished by the Board of Grain Commissioners for Canada, show the weekly range of the prices of different grades of wheat, barley, oats and flax at Winnipeg and Fort William; these prices are for the weeks ended Saturday. Table 21 gives the prices quoted for Canadian wheat, wheat flour and oats in British markets. The prices are compiled from the Market Supplements of the *Mark Lane Express*, London, England, and represent the range at the weekly Monday market. Tables 22 and 23 give the prices in British markets of Canadian bacon, hams and cheese; they are taken from the official returns of the English and Scottish Boards of Agriculture and represent, not the range, but the first and second qualities respectively. For the purposes of these tables the English currency, weights and measures have been converted into Canadian equivalent denominations.

19.—Weekly Range of Prices of Wheat at Winnipeg and Fort William, 1915.

(Per bushel of 60 lb.)

Prices of English Grain, 1641-1915.—Annual average prices of English wheat are available since 1641 and of English wheat, barley and oats from 1771. Table 24 showing the price of wheat from 1641 to 1770 is taken from Vol. 17, 1856, of the Journal of the Royal Agricultural Society of England, and Table 25 is from the Annual Agricultural Statistics of the English Board of Agriculture and Fisheries. The quotations in both tables are given in English shillings and pence

AGRICULTURE.

per quarter and in Canadian equivalents of dollars and cents per bushel of 60 lb. Throughout the whole period covered by the tables (1641-1914) the price of wheat was highest during the wars with Napoleon (1793-1815), and during the first fifteen years of the nineteenth century the annual average price never fell below \$1.76 per bushel, whilst on four occasions it exceeded \$3.19. The highest point was in 1812 when the yearly average was \$3.85. Prices fell after the conclusion of peace in 1815; but were maintained artificially by the Corn Laws (1791-1846). The repeal of the Corn Laws in 1846, which repeal took full effect on February 1, 1849, reduced prices for a few years, and in 1851 wheat was as low as \$1.17 per bushel; but the Crimean war (1853-6) followed by the Indian mutiny (1857-8) helped to maintain prices at a relatively high level, whilst the Franco-German war (1870-1) had a similar tendency. Periods of severe agricultural depression followed a series of bad seasons after 1876, when short returns were accompanied by falling prices owing to the cheap transportation of American grain. The price of wheat reached its lowest ebb of 70 cents per bushel in 1895. The average price for 1915 was \$1.61, and the price previous to the outbreak of the present war was \$1.04 on August 1, 1914.

24.—Yearly Average Prices of Wheat in England, 1641-1770.

NOTE.—The quarter (qr.) = 8 Imperial bushels of 60 lb. per bushel.

AGRICULTURE.

Ocean Freight Rates for Grain.—One of the effects of the war has been a great advance in the cost of ocean freightage. This has not been due to any appreciable extent to the risk of hostile destruction, because the allied navies, and especially the British Navy, have been able to secure and retain practically an absolute control over the maritime highways. The increased cost of freightage has been rather due to the general shortage of vessels through internment and especially the commandeering for purposes of military transport of vessels that would otherwise be employed in the shipping trade. In view of these conditions efforts have been made to collect for the purposes of statistical record the rates ruling for the trans-Atlantic carriage of grain, and especially of wheat, for as long a series of years as possible; and the accompanying tables are constructed from data furnished by the Shipping Federation of Canada and the Canadian Pacific Railway Co. (rates from Montreal) and the New York Produce Exchange and Mr. G. J. S. Broomhall of the Liverpool "Corn Trade News" (rates from New York). Table 26 shows the annual average steamship rates for heavy grain from Montreal to Liverpool during the navigation seasons 1861 to 1915. Table 27 gives the annual average steamship freights for wheat from New York to Liverpool for the years 1879 to 1915. Table 28 shows the average ocean rates on wheat from Montreal to Liverpool by months during the St. Lawrence navigation season from May to November, 1903 to 1915. Table 29 shows the rates from New York to Liverpool by weeks for the seven years 1909 to 1915. In each case the rates are expressed per bushel and per quarter in both Canadian and English currency.

26.—Annual Average Steamship Freight Rates for Heavy Grain from Montreal to Liverpool for the Navigation Seasons 1861-1915.

(Data furnished by the Shipping Federation of Canada, Montreal.)

PRODUCTION.

World's Production of Cereals and Potatoes.—Table 30, reproduced from the Bulletin of Agricultural and Commercial Statistics of the International Agricultural Institute, but with the metric weights and measures converted into Canadian equivalents, shows the areas and yields of wheat, rye, barley, oats, corn and potatoes in the principal countries of the world for the years 1914 and 1915 in the northern hemisphere, and for the years 1914-15 and 1915-16 for the southern hemisphere (Argentina, Australia and New Zealand). Owing to the war, data from Germany, Austria, Bulgaria, Serbia and Belgium are missing. For European Russia the figures of 1914 relate to 54 governments, but those of 1915 to 46 governments only.

World's Statistics of Farm Live Stock.—Table 31 shows the numbers of farm live stock in the principal countries of the world, as derived from the publications of the International Institute of Agriculture, and especially the Institute's International Year Book of Agricultural Statistics, 1913 and 1914, which was issued in 1915. The descriptions of live stock included are horses, asses and mules, cattle and buffaloes, sheep, goats and swine.

31.—Numbers of Farm Live Stock by Principal Countries of the World, 1905 and 1914.

AGRICULTURAL EXPERIMENT STATIONS OF CANADA.

DOMINION EXPERIMENTAL FARMS AND STATIONS.

Central and Branch Farms.—Under the Experimental Farm Stations Act, 1886 (R. S. 1906, c. 73), were established a Central Experimental Farm at Ottawa for Ontario and Quebec, and four branch Farms: (1) for the Maritime provinces at Nappan, Nova Scotia; (2) for Manitoba at Brandon; (3) for the Northwest Territories at Indian Head, Saskatchewan; and (4) for British Columbia at Agassiz. After these five Farms had continued in operation for 20 years, the first steps were taken towards their extension in number by the establishment of new Experimental Stations for Alberta, viz., one at Lethbridge in 1906 and the other at Lacombe in 1907. Since this date development in the number of the Farms and Stations, and in the work carried on by them, has been rapid and continuous; and every province has now one or more Farms or Stations.¹ In 1915, including the Central Farm at Ottawa, there are altogether 19 Farms and Stations with a total acreage of 8,935, as compared with the original five Farms, having a total acreage of 3,472, as established in 1886. Table 32 shows the present number of Farms and Stations with the acreage of each and the date of establishment.

¹The five original farms established in 1886 are known as "Experimental Farms"; those added since are styled "Experimental Stations." No distinction in the work is expressed by these titles.

Range of Experiments.—Ranging over the whole of the wide fields of agriculture, arboriculture and horticulture, the work of the Farms has included experiments and studies relating to the breeding and feeding of farm live stock, the production of butter and cheese, field crops, natural and artificial fertilizers, cereals, grasses and other forage plants, fruits, vegetables, plants, trees, plant diseases and injurious insects. The Farms are also bureaux of information to which agriculturists resort for the solution of difficulties in farm work. The experiments carried out at the Central and branch Farms and Stations have been fully described in the annual reports of the Director and of his staff.

In addition to the farms and stations included in Table 32 there are seven small substations at Salmon Arm, British Columbia, at Fort Vermilion, Grouard and Grande Prairie in Alberta, and at Forts Smith, Resolution and Providence, in the Northwest Territories.

Scientific Organization.—The more strictly scientific side of the work is carried on at the Central Experimental Farm at Ottawa, and is organized in thirteen divisions as follows: (1) Field Husbandry; (2) Animal Husbandry; (3) Horticulture; (4) Cereals; (5) Chemistry; (6) Forage Plants; (7) Botany; (8) Poultry; (9) Tobacco; (10) Economic Fibre; (11) Illustration Stations; (12) Apiculture; (13) Extension and Publicity. What was formerly the Entomological Division became in 1914 the separate Entomological Branch of the Department of Agriculture.

Results Achieved.—Only brief mention is possible of the more striking results already achieved, with some indication of the work now being carried on. In the field of general agriculture, the importance of

AGRICULTURE.

early sowing was demonstrated by a series of experiments which lasted for ten years, 1890-99. Under average seasonal conditions, it is now recognized that seeding should be completed as early as possible. As the result of experiments on the branch Farms in the West, the practice of summer fallowing for the conservation of moisture and the destruction of weeds is widely followed in the Northwest provinces. Experiments continued over 18 years, 1893-1910, have shown over large areas in Canada the economic advantage of applying fresh as compared with rotted farmyard manure. They indicated that a given weight of manure taken fresh from the farmyard is equal in crop-producing power to the same weight of rotted manure, and that fresh manure loses in the process of rotting from 50 to 60 per cent. of its weight. The great value of clover as a fertilizer when ploughed in has also been demonstrated by continuous experiments lasting from 1894 to 1906. From the establishment of the Farms, free samples of pure seed of new and tested varieties of grain and of potatoes have been annually distributed to farmers throughout Canada, with important results in improving the harvests of the country. In the Cereal Division, notable work has been done in the production of new varieties of grain, especially wheat possessing the qualities of productiveness, an early ripening habit and good baking strength. Varieties of wheat known as Preston, Stanley and Huron are all vigorous and productive, and ripen early; but the variety that has achieved the greatest success is the Marquis, which is equal to the Red Fife in baking qualities, ripens from five to ten days earlier and is superior in productiveness. It is now rapidly superseding the Red Fife throughout the Northwest.

Other Experiments.—Experiments, carried on over a series of years by the Field Husbandry Division, show the advisability of a rotation which includes a cereal crop, a hay crop (including clover) and a root crop. Experience has also shown that the shorter the rotation the greater are the profits, and that the most profitable rotation is one of three years: corn, or other hoed crop, grain, hay. In the Division of Animal Husbandry extensive breeding experiments are in progress. It has been found that nothing in this line is more profitable to a farmer than investing in a really good pure-bred bull for the grading up of his cattle, care being taken to adhere to one breed. This is true whether as applied to horses, beef cattle, dairy cattle, sheep or swine. So far as production is concerned, the well graded-up animal has been proved to be just as profitable as the pure-bred. Important work has been done in the demonstration of effectively ventilated stables and cow barns. The Division of Horticulture carries out numerous experiments with apples, plums, cherries, grapes, small fruits and vegetables. Many varieties have in past years been tested, and promising seedlings for different latitudes have been recommended to growers. The object of the experiments with apples has been to obtain, by cross fertilization and selection, new varieties that will stand the severe winters of Quebec, of the more northern parts of Ontario and of the Northwest provinces; also varieties of better-keeping qualities. Experiments were begun in 1915 to test the possibility of growing root and vegetable seeds in

PRODUCTION.

Canada instead of importing them from abroad. So far as they have gone, the experiments have proved successful and are being continued. In the Division of Botany, investigations of the diseases of cultivated plants are carried on at Ottawa and at the field laboratories of St. Catharines, Ont., Fredericton, N.B., and Charlottetown, P.E.I. Reports are made on diseased plant specimens sent in and advice is given as to remedial measures wherever possible. Weeds are identified and methods of eradication recommended. Wild plants from all parts of Canada are received for identification, and information is furnished as to whether they are edible, medicinal or poisonous. Tests are also made as to the suitability of the climate of Canada for the growth of various plants of economic importance, such as fibre plants (flax, hemp), medicinal plants (opium-poppy, anise, etc.), oil-yielding plants (castor oil, soy bean) and miscellaneous plants (mustard, chicory, etc.). Much has been accomplished in arboriculture not only by the setting apart of 65 acres at the Central Experimental Farm for the testing of trees and shrubs from all parts of the world, but also by the encouragement given to tree-planting in the western provinces.

The Division of Chemistry covers a large field, and the Dominion Chemist, who is also Assistant Director of the Farms, controls a staff of nine fully qualified chemists. Investigations have been conducted to determine the nutritive value of fodder plants—Indian corn, grasses, clovers, etc.—by analyses at different stages of their growth. Canadian grown cereals have been analysed to ascertain their quality and nutritive value, and the straw has also been examined to determine its value as fodder. Analyses have been made of soils from different parts of the Dominion, more particularly from the large untilled virgin area of the Northwest. Investigations have been made into the production, fermentation and application of farmyard manures. Many experiments have been conducted to throw light on the factors affecting soil moisture, and means have been suggested whereby the desired conditions of moisture may, to a great extent, be obtained and controlled by cultural operations. The influence of environment on the composition of wheat has been studied since 1905, and the work has now been enlarged, through co-operation with the Dominion Meteorological Service at Toronto, to secure a more comprehensive and detailed study of the relationship between weather conditions and crop growth. Analyses of sugar beets have been useful in demonstrating the suitability of soil and climate at widely different points of the Dominion for the growth of roots of high sugar content and purity. Well waters from farm homesteads have been the subject of special study. Numerous analyses are made in conjunction with problems relating to the land, the crop and the animal which from time to time are submitted by farmers for solution. Analyses are also made of dye stuffs, preservatives, pickling solutions, etc., for the Meat Inspection Division of the Health of Animals Branch of the Department, with a view to the detection of injurious substances. Systematic investigational work with commercial fertilizers is now being carried on at the larger number of the branch Farms and Stations. Owing to the scarcity of potash caused by the European war, the preparation of a nitro-potassic fertilizer by the

AGRICULTURE.

drying and grinding of seaweed was undertaken at a point on the coast of Nova Scotia. The fertilizing value of the material so prepared is being tested in the field.

The Poultry Division undertakes experiments in the breeding, mating, incubating, brooding, rearing, housing and feeding of farm poultry, in the production of eggs, the preparation of poultry produce for the market and the study of poultry diseases. Demonstrations in poultry keeping are made at Ottawa and at the Branch Farms and Stations, these latter being chiefly for the purpose of proving locally that farm poultry rather than the poultry farm is profitable, and for the distribution of improved breeding stock to farmers.

Recent Developments.—Experiments in the growth of tobacco are carried on by an expert from France at Ottawa, assisted by local superintendents at the tobacco stations of St. Jacques l'Achigan, and Farnham, Quebec and Harrow, Ontario. These experiments include the testing of different varieties to suit the Canadian soil and climate, the best means of curing and the preparation of different kinds of tobacco for the market. In 1912 a Division of Forage Plants was established under the direction of a scientific officer from the Plant Breeding Station at Svalöf in Sweden. The Division has for its object improvement in the quality and yield of grasses, clovers, alfalfas and other forage crops grown in Canada. An Economic Fibre Division has been established at Ottawa, for the purpose of stimulating the growth of flax for fibre throughout Canada. In 1915 small experimental plots were grown in different localities, and excellent samples of fibre were produced from the straw. A flax mill has been erected at Ottawa, and flax-pulling machines have been tested. Hemp-growing is also being tried.

Illustration Stations were started in 1914 by the selection of small areas at different points in Saskatchewan and Alberta, the object being to show to farmers in the districts selected the best cultural and crop methods. In 1915 a Division of Extension and Publicity was formed for the purpose of making the work of the Experimental Farms more widely known amongst the farmers of Canada. The Division issues every four months a publication entitled "Seasonable Hints," which gives timely notes and advice to help the farmer in his current work.

PROVINCIAL AGRICULTURAL EXPERIMENT.

NOVA SCOTIA.

College of Agriculture, Truro.—About 400 acres are devoted to general farming and gardening and to investigations, of which the following are some of the more important. The value of ground limestone as a means of improving soil fertility and of controlling Club Root in turnips is being determined. The experiment is in its third year. The results to date, as to which details will be found in the Report for 1915 of the Secretary of Agriculture, are extremely marked in the case of clover, but are not so marked with other crops. During three years, experiments have been made to ascertain the value for silage purposes of a mixture of peas, oats and vetches, as compared

PRODUCTION.

with Indian corn, for the best growth of which the climate of Nova Scotia is too cool. The results are decidedly in favour of the mixture, which accordingly the College authorities are urging farmers to grow. Tests are being made with a few of the leading varieties of oats and wheat and with selected strains within these varieties. A comparison of basic slag with acid phosphate is being made to determine the cheapest source of phosphoric acid under various conditions, and especially to determine whether a mixture of acid phosphate with ground limestone will give returns as good as or better than the basic slag alone, a considerable part of the value of which is supposed to be due to the lime it contains. In the Horticultural Department experiments are being carried on with different varieties and methods of growing strawberries and other plants; also a special effort is being made to develop hardy fruit tree stock for grafting purposes. Experiments in the hill selection of potatoes have in view the improvement of all varieties, and especially of the Garnet Chili potato which is shipped to Bermuda for seed purposes. In animal husbandry the main experiments are for determination of the cost of feeding various classes of animals. The use of silage from peas, oats and vetches has proved of special value, but, as in other Stations, outstanding results are observable in connection with the well bred versus the poorer bred cows and other animals that are being fed.

QUEBEC.

Macdonald College, Ste. Anne de Bellevue.—The College is situated about 20 miles west of Montreal and is incorporated with McGill University. The College property comprises 786 acres divided as follows: main farm, 584 acres; cereal husbandry plots, 75 acres; poultry department, 17 acres; orchards, 35 acres; vegetable gardens, 25 acres; the campus, including driveways, lawns, trees, shrubs, flowerbeds, school garden and recreation fields for students of both sexes, 50 acres. The following is a brief indication of the more important experiments, as to which further information may be obtained from the College Report of 1915-16.

Animal Husbandry.—During 1915-16 it was found that distillers' and brewers' dried grains, as marketed in Montreal and vicinity, are quite equal to wheat bran when forming a part of the meal mixture for dairy cows. They cannot be regarded as perfect substitutes for wheat bran, but may be included with advantage in order to add variety to the mixture and reduce the cost when the market price makes this possible. Some work has been done with tankage in hog feeding, the results tending to justify the use of this feed. In sheep breeding a few flocks of Cheviot sheep have been established with a view to obtaining by cross-breeding sheep specially suitable for Quebec.

Cereal Husbandry.—The improvement of farm crops by breeding and selection receives close attention. This work embraces all the principal farm crops: oats, wheat, barley, peas, rye, corn, root crops, alfalfa, grasses and clovers. Some of the best strains are being increased for distribution. Experiments with eight varieties of fodder corn were carried on last summer in seven different counties, their object being

AGRICULTURE.

to ascertain the varieties best adapted for growing in each section. In districts where the season is longest practically all the varieties matured sufficiently to make good silage, but elsewhere only the earliest maturing sorts, such as Longfellow and Golden Glow, proved satisfactory. During 1915-16 there was a very brisk demand for Quebec No. 28 corn, an exceedingly early, heavy yielding flint corn bred up in this department from Quebec Yellow. Root crop investigations are being carried on throughout the province of Quebec as well as at the College. The growing of root seed has received more attention than usual in view of the restricted supply from European sources. The work has demonstrated that excellent seed of all the root crops can be grown at a reasonable cost by any careful farmer, and that such seed gives better results than imported seed. In 1915-16 the College slightly extended experiments with alfalfa. Grimm seed was supplied to selected farmers and instructions were given as to the handling of the crop. In a number of cases lime or ground limestone was applied. The plots sown have not done equally well. In some cases excellent stands were secured and little or no winter killing resulted, while other plots were almost a failure from the start. Among the chief causes contributing to failure were lack of drainage, lack of lime in the soil and prevalence of grass and weeds. Where these conditions did not obtain, and seed of a hardy strain was sown, the results were usually satisfactory.

Other Departments.—Numerous other investigations are being made in the departments of Poultry, Chemistry, Bacteriology, Horticulture and Physics.

School of Agriculture, Ste. Anne de la Pocatière, Quebec.—This school which was established 56 years ago (1859) is situated on the southern shores of the St. Lawrence river in the electoral district of Kamouraska. Fine new buildings were completed and opened in 1912. To the school is attached a large farm on clay land at different levels. On most of this land ordinary crop production is practised; but a smaller area is devoted to experimental work with cereals, forage crops, grasses, clovers, corn, roots and potatoes. Horticulture is extensively practised. The experimental work also comprises under-drainage, cattle feeding and pork production. The School was affiliated to Laval University, Quebec, January 30, 1912.

Oka Agricultural Institute.—This, situated on the Lake of Two Mountains, about 20 miles from Montreal, is one of the oldest experimental farms in Canada. A large number of dairy cattle are kept, and experimental work is carried on with these and with swine, poultry and bees. Horticulture is practised largely; the growth of small fruits is a specialty and the vineyards are celebrated. The famous Oka cheese, made at this Institute, is sold widely in North America. The Institute was affiliated to Laval University, Montreal, March 25, 1908.

ONTARIO.

Ontario Agricultural College and Experimental Farm, Guelph.—This institution was established in 1874 with the two-fold purpose of training young farmers in the science and practice of agriculture and of conducting agricultural experiments. The experimental grounds of

PRODUCTION.

the College consist of about 75 acres divided into upwards of 2,000 plots, on which experiments are being conducted with varieties of grain, root, tuber, grass, clover, fodder, silage and other crops, with artificial, green and barnyard manures, with methods of cultivation, selection of seed, dates of seeding, mixtures of grains, pasture grasses, etc. These experiments deal with the crops grown on fully nine-tenths of the cultivated land of Ontario. The greater part of the land has a four years' rotation, the rotation being: 1st, grain crops; 2nd, cultivated crops; 3rd, grain crops, and 4th, pasture. This is a special rotation, particularly well suited to the experimental work as carried on at the College. About one-quarter of the land is manured each year, with twenty tons of farmyard manure per acre once every four years. Many of the field crop varieties now most extensively grown in Ontario were introduced by the Agricultural College, through the medium of the Ontario Agricultural and Experimental Union, including the Siberian, O.A.C. No. 72, and O.A.C. No. 3 varieties of oats. Next to the American Banner variety the Siberian is now probably the most extensively grown oat in Ontario, besides being quite largely grown in other parts of Canada. The O.A.C. No. 72, which is a plant-selected strain of the Siberian, and which has surpassed it in yield in the experiments at Guelph and in the co-operative experiments over Ontario, is also very largely grown at the present time. The O.A.C. No. 3 oat, a plant-selected strain of the Daubeney variety, is a popular early oat. The Mandscheuri barley and the O.A.C. No. 21, both of which were introduced by Guelph, are to-day grown on most of the barley lands of Ontario. It is rarely that any other varieties are shown at the present day exhibitions. The O.A.C. No. 21 is a plant-selected strain of the Mandscheuri, and has surpassed it in yield per acre and in quality of grain both in the comparative tests at Guelph and the co-operative experiments over Ontario. Dawson's Golden Chaff winter wheat, Mammoth White winter rye, O.A.C. No. 61 spring rye, Rye buckwheat, Common Emmer, Early Britain and New Canadian peas, Pearce's Improved Tree beans, Salzer's North Dakota flint corn, Golden Bantam sweet corn, Yellow Leviathan mangolds, Early Amber sugar cane, Empire State, Davies' Warrior and Extra Early Eureka potatoes, and Ontario Variegated and Grimm alfalfas, after being tested at Guelph, were distributed over Ontario, and are well known and widely grown. A considerable section of the experimental field is being used in testing about two hundred varieties and strains of alfalfa, fifteen strains of sweet clover, and in growing mangolds, carrots and turnips for seed production.

The experimental work of the College and Farm is very comprehensive, and includes, in addition to the department of field husbandry described above, departments of animal husbandry, dairying, poultry, agriculture, horticulture, pomology, agricultural chemistry, bacteriology, zoology, entomology, botany and physics. The Ontario Agricultural and Experimental Union, organized by officers of the College, conducts annual co-operative experiments in field husbandry with farmers throughout the province. The Union has been in existence for 38 years, and the average number of annual experimenters is about 4,500.

AGRICULTURE.

MANITOBA.

College of Agriculture, Winnipeg.—The College has extensive buildings, but the area of land available for agricultural experiments is somewhat limited. Experiments are however being carried on in the production of cereals, hoed crops and grasses. The College possesses herds of Ayrshires, Holsteins, Jerseys, Aberdeen-Angus and Canadian cattle. There is an experimental dairy, and attention is devoted to horse-breeding and to sheep, swine and poultry.

SASKATCHEWAN.

College of Agriculture, Saskatoon.—This College has a large farm of about 2,500 acres on which experiments are being conducted in cultural methods of crop production and in rotation and variety tests. These experiments deal with questions of choice, improvement, management, tillage, rotations and soil fertility, and are conducted by the Department of Field Husbandry on a quarter section of land devoted to field work. Nearly 600 improved varieties, more than 125,000 plants and 1,300 crosses have been or are still under investigation. Crop management includes the trial of every common crop grown in the West under different conditions of planting, seeding and harvesting. Tillage is studied in relation to (1) prairie and sod; (2) stubble; (3) fallow. The rotations under trial number 120 annual crops and 40 perennial crops, and include every possible combination of the field crops grown in the province. The effect of each of 21 different fertilizers is being measured on the yield of various crops over a series of years. Much attention is paid to animal husbandry, the breeds of cattle, including Shorthorns, the Aberdeen-Angus, Ayrshires, Holsteins and Jerseys. Other experimental work includes beef production, the breeding of sheep and swine and the keeping of swine on pastures. The poultry comprise turkeys and Wyandotte and Barred Rock fowls.

ALBERTA.

Experimental Plots and Agricultural Schools.—Experimental work at each of the three provincial Schools of Agriculture at Claresholm, Olds and Vermilion has been carried on by the Department of Agriculture since October, 1914. The schools are attended principally by young men and women who intend to go back to the farm. On the experimental and investigational side the plot work has reference to problems of successful farm practice relating to the district in which each school is placed or to modifications in common practice suited to the local soil and climate. A considerable part of the twenty acres on which the schools are situated is devoted to experiments with grains, fodders, roots, vegetables, small fruits, flowers, shrubs and trees. The production of crops on soil prepared in different ways is fully investigated; *e.g.*, summer fallow, corn or root land, stubble land, breaking, spring and fall ploughed land, packed and unpacked, harrowing after seeding, etc. This is given emphasis both in relation to the success of individual crops and to the establishment of cropping systems. Considerable attention is given to methods, rates, depths and dates of seeding. An important part of the work consists in the testing of

PRODUCTION.

varieties. Approximately a dozen of the standard varieties of grains, such as wheat, oats, barley, peas and corn, are sown each year and an equal number of varieties of potatoes. The same practice is followed in regard to garden vegetables, small fruits, ornamental shrubs and trees. The uses of the hotbed and cold frame are illustrated. Fodder crops are tried as to adaptability to soil and climate, as to methods and rates of seeding, and as to seeding with or without nurse crops. Alfalfa has been subject to experiments in relation to varieties and methods of sowing. Grain plots serve for multiplying as well as for experimental plots, and useful quantities of seed eligible for registration under the Canadian Seed Growers' Association rules have been produced. Trees are cultivated and tested as to kinds and treatment for use in single planting and in certain parts of the province for windbreaks. Important results have already been established in the use of trees as windbreaks for the protection of fruit and general garden plots. Extension work in experiments is organized among students for work on their farms. Each year allotments are made to junior students and reports made in the following year.

Demonstration Farms Contiguous to Schools.—Each School is situated on one of the provincial Demonstration Farms, and while the farms and schools are separate branches of departmental administration, there are a number of points of contact between the farm and school. The farms serve as concrete examples of properly managed and balanced enterprises of a type suited to local conditions. The results of experiments on the school plots are applied on the farms. There are seven demonstration farms, but at present only three schools.

• **University of Alberta.**—A Faculty of Agriculture has been established at the new University of Alberta, Edmonton South, and about 90 acres of land are available for future experimental work.

BRITISH COLUMBIA.

Department of Agriculture.—Experiments are being carried out by the Live Stock and Horticulture Branches. The Live Stock Branch is conducting one experimental plot of 13 acres, eleven of from 4 to 5 acres and six one-acre alfalfa plots. In the newly-settled districts tributary to the Grand Trunk Pacific, the work consists largely of tests for determining what varieties best suit local conditions. On the other plots, aside from those devoted exclusively to the growing of alfalfa, a rotation system suitable for the district represented is being established. As far as possible the work is carried on in co-operation with the local Farmers' Institute. The Horticultural Branch is operating 16 demonstration and experimental orchards of five acres each. These orchards are planted and cared for under a co-operative arrangement by which the owner of the land and the Department share the expense. The agreements cover a five-year period, but in some cases further agreements are being made. The principal object in most cases is to demonstrate the results which may be secured in various districts by the adoption of the best possible methods. In other cases the orchards are used for experimental tests of varieties and experimental work with cover crops, etc. Three five-acre experimental and demonstration plots are being

FORESTRY.

operated in the Northern Coast section. On these plots a wide range of experimental work in the testing of varieties of grains, grasses, fodder crops, vegetables, small fruits, etc., is being conducted. An Experiment Station for small fruits and vegetables has been operated for three years at Summerland, the owner of the property receiving a direct yearly remuneration. This plot is partly on a commercial basis and does experimental work with varieties, methods of culture, etc., on the tender kinds of vegetables and on small fruits. At Chilliwack a five-acre plot was planted with small fruits four years ago to demonstrate the possibilities of these crops in this locality. It is operated under a five-year co-operative agreement with the owner. A good deal of experimental work in spraying, etc., is carried on.

University of British Columbia.—On the site of the new University at Point Grey a beginning has been made in the preparation of land and erection of buildings for agricultural and horticultural experiments. Ninety acres have been cleared and made ready for cropping. Of this area, 60 acres have been sown with green manure crops to increase the humus content of the soil. Land has also been prepared for the transference of the provincial botanical gardens from Essondale to the University campus. This collection includes upwards of 25,000 specimens of the native flora of the province, and will constitute a most valuable reference collection, as nearly 800 species are represented.

FORESTRY.

Under the heading of forestry this year are given (a) statistics collected by the Census of 1911 of forest products on occupied farm lands in Canada (Tables 33-35) and (b) statistics and estimates for all forest products in Canada, as published annually by the Forestry Branch of the Department of the Interior (Tables 36-41).

Census Statistics of Forest Products on Farms.—Tables 33-35 show the quantities and values by kinds of trees or classes of products, of square, waney or flat timber, logs for lumber and miscellaneous products, cut on occupied farm lands in Canada in 1910. These figures cannot be compared with the census returns of 1901, because in 1911 the instructions related to products on occupied farm lands within the enumerator's district, whilst in 1901 they were for all forest products within the polling subdivision or other area, whether on crown lands, limits or farms and no matter by whom cut. The tables give, however, comparative figures of prices per unit for the years 1900 and 1910. The total value of the forest products of occupied farm lands in Canada for 1910 was \$35,024,429, of which \$1,029,746 related to square, waney or flat timber, \$13,907,026 to logs for lumber and \$20,087,657 to miscellaneous products.

Estimated Value of all Forest Products.—Table 36 is an estimate of the total values of the different classes of forest products for the calendar years 1912 to 1915. The figures are rounded to hundreds of thousands of dollars and form as reliable a summary as can be made from the data available, which are partly actual statistics and partly estimates of the Forestry Branch. The total value for 1915 is \$172,880,000 as compared with \$176,672,000 for 1914.

FISHERIES.

Capital Invested.—The estimated total capital invested in the fisheries amounted in 1914-15 to \$24,733,162, as compared with \$27,464,033 in 1913-14. Of the total for 1914-15 the sum of \$22,331,072 was invested in connection with the sea fisheries and \$2,402,090 in connection with the inland fisheries. The value of the vessels and boats is represented by \$8,348,572 in 1914-15 as against \$8,279,437 in 1913-14, and the value of the fishing gear, canneries, fish-houses and other fixtures by \$16,384,590 in 1914-15 as against \$19,184,596 in 1913-14. Table 42 shows the distribution of capital amongst the various descriptions of vessels, boats, nets, traps, etc., used in both sea and inland fisheries for the fiscal year 1914-15.¹

Number of Fishermen.—There were 94,513 persons employed in the fishing industry during the year 1914-15, as compared with 98,669 in 1913-14, a decrease of 4,156, the sea fisheries engaging 84,108 persons and the inland fisheries 10,405. Of the total in 1914-15, 9,400 were employed on vessels, tugs and smacks, 60,554 on boats, and 24,559 in canneries, freezers, fish-houses, etc.¹

Fishing Bounties.—Under an Act of 1882 (45 Vict., c. 18), passed for development of the sea fisheries and encouragement of the building of fishing vessels, provision was made for the distribution in bounties of \$150,000 annually among the owners of fishing vessels and fishermen engaged in fishing from boats in the deep sea fisheries of Canada. An Act of 1891 (54-55 Vict., c. 42) increased the amount to \$160,000. By Order-in-Council of January 26, 1915, made under the provisions of the Revised Statutes of 1906, c. 46, the distribution of the appropriation of \$160,000 for the year 1914-15 was made on the following basis: \$1 per registered ton to owners of vessels, \$6.40 to each vessel fisherman, \$3.65 to each boat fisherman and \$1 per boat to owners of fishing boats. The number of vessels which received bounties in 1914-15 was 955, with an aggregate tonnage of 23,811, an increase of 45 vessels and 978 tons, as compared with 1913-14. The number of boats on which bounties were paid was 13,261, and the number of boat fishermen who received bounties was 22,828, an increase of 638 boats and of 1,271 men as compared with 1913-14. The total number of fishermen in vessels and boats to whom bounties were paid in 1914-15 was 28,950, a net increase of 1,714 as compared with the previous year. The number of claims filed in 1914-15 was 14,281, an increase of 869 over 1913-14, and the number paid was 14,216, or 683 more than in the previous year. The total fishing bounties paid since 1882 amount to \$5,218,445.

Table 43 shows by provinces the number of fishermen who received bounties and the amount of the bounties paid to them during each of the fiscal years 1911-1914.

¹For similar statistics of previous years, see Canada Year Book of 1911, p. 390. Also for a description of the extent of Canadian fisheries and of the methods of capture, see edition of 1914, page 230.

Inland Fish Markets.—Other government assistance to the fishing industry takes the form of encouraging the development of markets for fresh fish in the interior of the country by payment of one-third of the ordinary express charges on shipments of fresh fish from the Atlantic coast to points as far west as the eastern boundary of Manitoba and from the Pacific coast as far east as that boundary. Cold storage cars by fast freight are placed at the disposal of shippers from the Atlantic seaboard, and aid is rendered in the building of small cold storage establishments for the storing of bait. Fish-breeding is carried on by the Dominion Government upon an extensive scale, the expenditure for this service in 1914-15 amounting to \$370,093. The hatcheries in operation number altogether 64, including seven subsidiary hatcheries; there are also retaining ponds for Atlantic salmon. The hatcheries are situated in Prince Edward Island (3), Nova Scotia (12), New Brunswick (11), Quebec (12), Ontario (8), Manitoba (4), Saskatchewan (1), Alberta (1) and British Columbia (12). In addition, there is one in British Columbia which is operated by the British Columbia Packers' Association.

Value of Fisheries.—As shown in Table 44, the total marketed value of all kinds of fish, fish products and marine animals, taken by Canadian fishermen in both the sea and inland fisheries during the year ended March 31, 1915, amounted to \$31,264,631, as compared with \$33,207,748 in 1913-14. To the total amount in 1914-15 the sea fisheries contributed \$27,198,257 and the inland fisheries \$4,066,374.¹

¹For further details respecting the Canadian fishing industry, see Annual Reports of the Department of Marine and Fisheries, from which the statistics in the Year Book have been compiled.

MINERALS.

Sources of Mineral Statistics.—Mineral statistics are available from various independent official sources. On July 21, 1913, the Census and Statistics Office published as Bulletin XVI the results of the Census of Mineral Production taken in 1911. The Mines Department of the Dominion Government publishes an Annual Report of Mineral Production, and Annual Reports are also published by the Departments of Mines of the Provincial Governments of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Data derived from each of these sources were given in this section of the Year Book of 1913 (pp. 196-211), but in the present edition the statistics given are limited to those of the Dominion and provincial Departments of Mines.

Dominion Department of Mines.—According to the annual preliminary report of the Division of Mineral Resources and Statistics of the Dominion Department of Mines, the metal mining industry has, in 1915, as a result of the demand created by the war, shown the highest production ever recorded; and notwithstanding the greatly decreased production of materials of construction, such as cement, clay and stone quarry products, a very large increase is still shown in the total mineral output over that of the previous year. The total value of the metal and mineral production in 1915, as shown in the preliminary report, was \$138,513,750, as compared with \$128,863,075 in 1914 and \$145,634,812 in 1913, the latter being the highest production then recorded. The increase in 1915 over 1914 was thus \$9,650,675, or 7.49 p.c., but the output is still less than that of 1913 by \$7,121,062. The demand for the metals, copper, lead, nickel and zinc, led to great activity in the operation of the already developed deposits of these metals, and also, later in the year, to the opening up of old and the exploitation of new deposits. The capacities of steel furnaces were taxed to the utmost to meet the demand for shell steel. Amongst non-metallic minerals the recovery of benzol and toluol in by-product coke oven operations was a direct result of the war, as was also the activity in the mining and shipment of magnesite and of chrome ores.

Increase or Decrease in Principal Products, 1915.—It will be observed from Table 49 that there has been an increased production in all metals, with the exception of silver. The total value of the metallic production in 1915 was \$77,046,082, as compared with \$59,386,619 in 1914, and \$66,361,351 in 1913, the increase over 1914 being nearly 30 p.c., and over 1913, the previous highest year, about 16 p.c. The production of nickel, copper and zinc are the highest that have been recorded in these metals. The quantity of nickel was 50 p.c. greater than in 1914, copper was over 35 p.c. greater, lead nearly 25 p.c. greater, gold over 18 p.c. and pig iron nearly 17 p.c. The falling off in silver was only 48,000 ounces or less than two-tenths of one per cent. Owing to the high prices of copper and lead the total values of these metals show increases of 72 p.c. and 56 p.c. respectively. Compared with 1914 the average price of copper shows an increase of 154 p.c., antimony (ordinaries) an increase of 246 p.c., silver a decrease of 9.4 p.c. and tin an increase of 12.2 p.c. The total value of the non-metallic produc-

PRODUCTION.

tion in 1915, including clay and quarry products, etc., was \$61,467,668, as against \$69,476,456 in 1914 and \$79,273,461 in 1913. Compared with 1914 the decrease was \$8,008,789, or 11.5 p.c., while compared with 1913 the falling off was \$17,805,793, or 22.5 p.c. It will be seen that the largest decreases in 1915 occurred in materials of construction, such as cement, clay products, lime, sand and gravel, and stone and quarry products, the falling off varying from 16 to nearly 34 p.c. There was, however, also a smaller production of coal, natural gas and gypsum. On the other hand, there were increases in the shipments of asbestos, chromite, graphite, magnesite, pyrites and salt.

P R O D U C T I O N .

Iron Blast Furnaces in Canada in 1915.—Of 22 completed furnaces 13 were in blast in 1915 for varying periods of time. The total daily capacity of the 22 furnaces is about 4,470 tons. The operating companies, with numbers and capacities of furnaces, were as follows:

DOMINION IRON & STEEL Co., Sydney, C.B.: Six completed furnaces of 280 tons capacity each per day; two operated throughout 1915, one for 36 days and one for 179 days; and one for 348 days; one furnace idle throughout the year.

NOVA SCOTIA STEEL & COAL Co., LIMITED, New Glasgow, N.S.: One furnace at Sydney Mines, C.B., of 280 tons capacity; operated throughout 1915.

LONDONDERRY IRON & MINING Co., LIMITED, Londonderry, N.S.: One furnace of 100 tons capacity, idle throughout the year.

CANADA IRON FOUNDRIES, LIMITED, Montreal, Que.: Two small furnaces of seven and eight tons capacity, at Drummondville, Que.; one furnace of 24 tons daily capacity, at Radnor Forges, Que.; two furnaces of 125 tons and 250 tons at Midland, Ont.; all idle throughout the year.

STANDARD IRON Co. OF CANADA, LIMITED, Deseronto, Ont.: One furnace at Deseronto with a daily capacity of 65 tons, operated for 235 days during the year 1915; one furnace of 65 tons at Parry Sound, idle throughout the year.

THE STEEL Co. OF CANADA, LIMITED, Hamilton, Ont.: Two furnaces, one of 260 tons capacity, operated for 52 days in 1915, a second furnace of 430 tons capacity, operated throughout the year.

ALGOMA STEEL Co., LIMITED, Sault Ste. Marie, Ont.: Three furnaces at Steelton, near Sault Ste. Marie, two of 280 tons capacity each, and one of 500 tons capacity, operated throughout the year.

THE ATIKOKAN IRON Co., LIMITED, Port Arthur, Ont.: One furnace of 100 tons capacity, idle throughout the year.

THE CANADIAN FURNACE Co., LIMITED, Port Colborne, Ont.: One furnace of 325 tons capacity, operated 262 days in 1915.

Mines Departments of Provincial Governments.—In addition to the Mines Department of the Dominion Government, from whose reports the foregoing tables and information have been compiled, there are Departments of Mines of the Provincial Governments of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia.

Nova Scotia.—In Nova Scotia the principal product is coal; and, according to the Report of the Provincial Department, the quantity of coal raised in the year ended September 30, 1915, was 7,379,464 long tons, as compared with 7,005,464 tons in 1914. The production of other minerals in 1915 was, in short tons, as follows, the corresponding figures of 1914 being given within round brackets: pig iron, 295,868 (281,428); steel ingots, 369,310 (341,818); limestone, 353,412 (335,515); coke, 452,099 (467,730); gypsum, 230,216 (283,340). The number of bricks made was 1,922,100 as against 14,543,608 in 1914 and the production of drain pipe tile was 1,022,470 feet as against 1,592,875 feet in 1914. The production of gold was 7,216 oz., as against 3,158 oz. in 1914. Regulations for the installation and use of electricity in the coal mines of Nova Scotia were approved by Order-in-Council of August 21, 1915. They are included in the Annual Report for 1915 of the Department of Public Works and Mines.

New Brunswick.—The Annual Report for the year ended October 31, 1915, of the Minister of Lands and Mines, states that the mining industries of the province include three commercially successful branches,

MINERALS.

viz., gypsum, coal and oil with natural gas. The production of gypsum was hampered by the large falling off in building operations, gypsum being made into wall plaster; and in 1915 about 72,000 tons of gypsum rock were quarried, of which 52,000 tons were exported to the United States and the balance was manufactured into about 120,000 barrels of wall plaster. For the season of 1914 the total output of gypsum was 74,762 tons. Royalties were paid in 1915 on 118,953 tons of coal, as compared with 96,577 tons in 1914. Of natural gas the production in 1915 was 305,673,200 cubic feet, of which 1,576,200 cubic feet were used by the producers for light, heat or power and 304,097,000 cubic feet were sold for distribution in Moncton and Hillsborough. The oil sold from January 1 to September 30, 1915, amounted to 27,606 gallons.

Quebec.—The Annual Report of the Quebec Superintendent of Mines shows that the value of the mineral production of the province for the calendar year 1915 amounted to \$11,465,873, as compared with \$11,732,783 in 1914 and \$13,119,811 in 1913. The falling off during the past two years is due to abnormal conditions caused by the war. Of the value of total production in 1915, viz., \$11,465,873, the sum of \$5,223,639 for mine products represents an increase of 32 p.c. and the sum of \$6,242,234 for structural materials represents a decrease of 20 p.c., as compared with 1914.

Ontario.—The preliminary Report of the Bureau of Mines, Department of Lands, Forests and Mines shows that the total value of the mineral production of Ontario in the calendar year 1915 was \$57,856,375, as compared with \$46,295,959 in 1914 and \$53,232,311 in 1913. The increase in 1915 over 1914 due largely, as explained below, to an increased valuation of nickel and copper, is 25 p.c., and the decrease in 1914, compared with 1913, was 13 p.c. The rapid growth which marked the mineral production of Ontario for a decade prior to 1914 received a severe check in 1914, owing in part to business depression, but chiefly to the outbreak of the war and the consequent disturbances in industrial and financial conditions. In 1915 there was a turn in the tide with an increase over 1914. Gold exhibits a large advance, offset to some extent by a decrease in silver production. Nickel and copper show what would in times of peace be considered abnormal increases. The demand for these metals for munition purposes has been great, and increased prices have stimulated production to the maximum capacity of the mines. Of the total value in 1915, \$47,721,180 represents the value of the metallic and \$10,135,195 the value of the non-metallic production. The principal metals are gold, silver, copper, nickel, iron and cobalt. The quantity of gold produced was 411,588 oz. of the value of \$8,501,391, as compared with 268,942 oz. of the value of \$5,529,767 in 1914. The total dividends paid by gold mining companies in Ontario to December 31, 1915, amount to over \$5,000,000. The production of silver was 23,730,839 oz., of the value of \$11,742,463, as compared with 25,217,994 oz. of the value of \$12,795,214 in 1914. In 1915 the dividends paid by Cobalt silver mines amounted to \$4,441,948, the total return to shareholders to the end of 1915 being \$59,660,912. Of nickel the production was 34,039 short tons, valued (in the matte) at \$17,019,500, as compared

PRODUCTION.

with 22,760 tons valued at \$5,109,088 in 1914. The production of copper in matte was 19,608 tons, value \$3,921,600, as compared with 14,453 tons, value \$2,081,332, in 1914. Of the increase in value, as compared with 1914, amounting to \$11,236,885, the sum of \$10,588,756 represents the increase in valuation placed upon the nickel and copper contents of the Sudbury mattes. Even on the low basis of the valuation the figures for 1915 record a total increase in production over 1914 of \$648,129.

British Columbia.—According to the Annual Report of the Provincial Mineralogist the total mineral production for the calendar year 1915 was of the value of \$29,447,508, as compared with \$26,388,825 in 1914, an increase of \$3,058,683, or about 12 p.c. The principal mineral products of British Columbia are gold, lead, copper and coal. Table 62 shows the quantity and value of the mineral production of British Columbia for the three calendar years 1913-15.

VII.—TRADE AND COMMERCE.

Included in this section are tables showing the exports and imports of Canada in different categories and for varying periods. These are followed by grain statistics and statistics relating to bounties, patents and copyrights, trade marks, etc.

Aggregate External Trade.—Exclusive of coin and bullion, the aggregate external trade of Canada for the year ended March 31, 1916, was of the value of \$1,309,545,664, as compared with \$958,894,411 in 1914-15 and \$1,090,948,716 in 1913-14. The increase in 1915-16, as compared with 1914-15, is \$350,651,253, or 36.6 p.c., and as compared with 1913-14 it is \$218,596,948, or 20 p.c. A considerable proportion of the increased value of Canadian exports during the last two years has been due directly to the war, large increases being shown for grain, hay, boots and shoes, cartridges, explosives and fulminates, metals, minerals, iron, steel and manufactures thereof. In 1915-16 the total trade of the Dominion with the United Kingdom was \$540,057,644, as compared with \$302,112,198 in 1914-15. With the United States it was \$610,083,822 in 1915-16, as compared with \$495,014,031 in 1914-15, while the trade with countries other than these two was \$159,404,198 in 1915-16 as compared with \$161,768,182 in 1914-15.

Trade of Calendar Year 1915.—For the calendar year 1915 the total value of Canadian trade with other countries amounted to \$1,123,909,477, exclusive of coin and bullion, as compared with \$938,862,810 in 1914, an increase of \$185,046,667, or 19.7 p.c. Exports in 1915 amounted to \$653,488,412, as compared with \$416,237,098 in 1914, and imports to \$470,421,065, as compared with \$522,625,712 in 1914. Trade with the United Kingdom reached a total value of \$435,544,589, as compared with \$283,284,831 in 1914. Exports to the United Kingdom in 1915 were \$361,486,588, as compared with \$184,222,774, and imports from the United Kingdom in 1915 were \$74,058,001, as compared with \$99,062,057. Trade with the United States reached the total value of \$543,711,316, as compared with \$508,789,359 in 1914. Exports to the United States were \$204,708,903, as compared with \$160,938,979 in 1914, and imports from the United States were \$339,002,413, as compared with \$347,850,380 in 1914.

Trade Fluctuations by Quantities and Values.—It is evident that values alone cannot give a true measurement of the increase or decrease of trade from year to year, because such increase or decrease depends upon the double factors of price and volume. The increase or decrease in the value of articles imported into and exported from Canada that may be due (a) to higher or lower prices and (b) larger or smaller quantities, as between the fiscal years 1914 and 1915, has been carefully calculated in the Census and Statistics Office for a large number of separate articles; but there is not space in this edition of the Year Book for more than a summary by leading classes of products, which accordingly is given in Table 43. The principle of calculation followed is that of the British Board of Trade. For all articles of which quantities as well as values are recorded in the trade returns, it is easy to ascertain the differences due to each by direct calculation; but where values alone

AGGREGATE EXTERNAL TRADE.

are recorded and not quantities, it is necessary to proceed by estimate. And the method adopted is to group such articles with the classes to which they properly belong and assume that the variation due to volume has been in the same proportion as other articles in the class for which quantities are given. Inasmuch as the articles for which only values are given are relatively few and unimportant, the results are not greatly influenced by the amount of estimation necessary. The table shows that in 1915 the total value of exports of produce of Canada (exclusive of coin and bullion) was in round figures \$409,419,000, as compared with \$431,588,000 in 1914. The decrease is made up of increases in values due to higher prices, which amount to \$19,495,000, or 5 p.c., and of decreases in value due to smaller quantities (partly estimated) amounting to \$41,664,000, or 9.6 p.c.: so that the net decrease in value due to variations both of price and quantity is \$22,169,000, or 5.1 p.c. Similarly, in the case of imports for home consumption, the total value in 1915 was \$455,445,000, as compared with \$618,457,000 in 1914, the decrease of \$163,012,000, or 26.4 p.c., being made up of \$19,715,000, or 4.1 p.c., due to lower prices and \$143,297,000, or 23.2 p.c. due to smaller quantities. Taking the total trade (exports and imports) this was of the value of \$864,864,000 in 1915, as compared with \$1,050,045,000 in 1914, a decrease of \$185,181,000, or 17.6 p.c., and made up of \$220,000 due to the decrease of value by the net lowering of price and of \$184,961,000, or 17.6 p.c., due to decrease of value by the net smaller quantity. The table further shows the classes of produce that are affected by differences in price and volume. In the section for total trade the values in the classes for agricultural, animal, fisheries and miscellaneous produce are affected by higher prices, but only the class for animal produce shows an increase in value due to larger quantities. The period covered by the table is for the fiscal year ended March 31, 1915, as compared with 1914. Therefore it includes the trade that was most violently affected by the sudden outbreak of the war in July and August, 1914.

The articles in Tables 18 and 19 are usually grouped as natural products, as has been done in Table 7 under the heads of agricultural, animal, fisheries, forest and mineral produce, as well as in Tables 12 to 14. But by some authorities they are grouped with manufactured products, and they have been abstracted here to show the kinds and values of articles to be added to manufactures in those several tables, if so classified. If added to the exports of manufactures as given in Table 7, page 259, or in Table 14, page 311, the total values would be \$143,938,754 for 1911, \$144,822,716 for 1912, \$164,087,379 for 1913, \$180,891,368 for 1914, and \$203,626,274 for 1915. Added to the exports of manufactures to the United Kingdom in Table 7, page 259, the total value for 1915 would be \$89,854,105, to the United States \$80,609,855, and to other countries \$33,162,314, and the total increase in the period from 1911 to 1915 would be over 41 p. c. But the chief component value of these exports is that of raw material.

TRADE AND COMMERCE.

GRAIN STATISTICS.

A description of the arrangements for the storage, inspection, grading and shipment of Canadian grain has been given in previous issues of the Year Book (see pp. 454-457 of the edition of 1914). Tables 47 to 51 give the principal grain statistics for a series of years. For the fiscal year 1915-16 the total storage capacity of the 3,078 grain elevators and warehouses in Canada was 180,988,000 bushels, these figures representing an increase from a total of 523 elevators and warehouses with a capacity of 18,329,352 bushels in 1900-01. Under the Canada Grain Act, 1912, the Dominion Government has power itself to erect and operate terminal grain elevators. Four such elevators are already in operation and are situated respectively at Port Arthur (Ont.), Saskatoon (Sask.), Moosejaw (Sask.) and Calgary (Alberta).

Table 47 shows for the crop years 1901 to 1916 the number of railway stations at which elevators are placed, the number of elevators and warehouses and their total storage capacity, the figures being given by provinces for the country elevators of the west, and by description of elevators for the rest of the country. Tables 48 and 49 give statistics of the inspection of grain for the years 1913, 1914 and 1915, and Tables 50 and 51 of the shipment of grain by vessel and rail for 1914 and 1915.

47.—Number and Storage Capacity of Canadian Grain Elevators in the crop years 1901-1916.

BOUNTIES.

Iron and Steel Bounties.—In 1883 a bounty of \$1.50 per ton of 2,000 lb. was first granted on pig iron produced from Canadian ore. This bounty was continued annually until June 30, 1886. On July 1, 1886, the rate was reduced to \$1 per ton, at which it remained until June 30, 1892. From July 1, 1892, to June 30, 1897, the rate was \$2 per ton, and from June 28, 1897, to April 23, 1902, the rates were \$3 per ton from Canadian ore and \$2 per ton from foreign ore. A sliding scale of rates was then introduced, beginning with \$2.70 from Canadian ore and \$1.80 from foreign ore, which scale in 1906 left the rates at \$1.05 per ton from Canadian and 70 cents per ton from foreign ore. In 1907 a new sliding scale was authorized under which, for the calendar years 1907 and 1908, \$2.10 was paid from Canadian and \$1.10 from foreign ore; for 1909 the rates were respectively \$1.70 and 70 cents, and in 1910, 90 cents and 40 cents. On December 31, 1910, the bounty for pig iron ceased, excepting for that produced from Canadian ore by the electric process. No claim has, however, yet been made for pig iron produced in this manner.

A bounty on steel made in Canada was first granted as from March 27, 1894, the rate being \$2 per ton, which continued in force until June 30, 1897. The rate was \$3 per ton from July 1, 1897, to April 23, 1902, when a sliding scale was introduced which, commencing at \$2.70 per ton, was reduced to \$1.05 in 1906. The rates were for 1907 and 1908 \$1.65, for 1909 \$1.05 and for 1910 60 cents per ton. The bounty on steel ceased on December 31, 1910. Bounty was paid on wire rods at \$6 per ton from October 24, 1903, to June 30, 1911. On rolled angles, beams and other rolled shapes and on rolled plates the bounty was \$3 per ton from October 24, 1903, to December 31, 1906. On puddled iron bars a bounty of \$2 per ton was paid from March 26, 1894, to June 28, 1897. From this date to April 23, 1902, the rate was \$3 per ton, when a sliding scale was put into operation which reduced the rate to \$1.05 in 1906. For the calendar years 1907 and 1908 the rate was \$1.65, for 1909 \$1.05 and for 1910 60 cents per ton. Puddled bars ceased to be manufactured in Canada in 1907.

Lead Bounties.—To encourage silver lead smelting and the smelting of other ores of silver and gold in Canada, a bounty of 50 cents per ton on silver lead was authorized between July 1, 1895, and July 1, 1900. On October 24, 1903, a bounty of 75 cents per 100 lb. was authorized on lead contained in lead-bearing ores mined and smelted in Canada, provided the price of pig lead in London, England, did not exceed £12 10s. This price was changed in 1908 to £14 10s. The bounty is reduced proportionately when the price in London exceeds £14 10s. The bounty was due to expire on June 30, 1913, but by the Lead Bounties Act, 1913, of the session 1912–13 (3-4 Geo. V, c. 29) it was provided that payment of the bounty should be continued annually until June 30, 1918, the preamble to the Act setting forth that on June 30, 1913, there would still remain unexpended approximately \$600,000 of the original bounty of \$2,450,000.

Petroleum Bounty.—On June 8, 1904, a bounty of $1\frac{1}{2}$ cent per imperial gallon was authorized on all crude petroleum produced from wells in Canada. In 1910 a bounty was authorized on petroleum

TRADE AND COMMERCE.

produced from shales; but as yet this process has not been successfully prosecuted.

Manila Fibre Bounty.—On October 24, 1903, a bounty equal to the export duty in the Philippine Islands on Manila fibre, and not to exceed three-eighths of one cent per lb. on the Manila fibre used in the manufacture of binder twine, was authorized. This bounty was extended on April 27, 1907, to include Manila fibre used in the manufacture of cordage. The bounty on Manila fibre expired on October 4, 1913.

Total Value of Bounties.—Table 52 shows the quantity of mineral products and of Manila fibre upon which bounties were paid and the amount of the bounties paid from 1896 to 1914. From this table it will be seen that the amount of these bounties paid in 1915 was \$124,272, and that the total value of bounties paid from 1896 to 1915 was \$21,560,728. Of this amount \$16,785,827 was for iron and steel, \$1,979,104 for lead, \$2,427,835 for crude petroleum and \$367,962 for Manila fibre. Table 53 gives the names of the cordage companies, the quantities of Manila fibre used and of cordage made and the amount of the bounties for the fiscal year ended March 31, 1915.

NOTE.—The quantity of binder twine and cordage made in 1915 was 969,673 and 969,287 lb., respectively.

TRADE AND COMMERCE.

PATENTS.

Applications for patents in Canada from inventors in other countries were first received in 1872. In that year the total number of applications for patents made to the Canadian Patent Office, Department of Agriculture, was 752, and the total fees amounted to \$18,652. The business of the Office has continued gradually to expand, and the number of applications and total fees have increased each year without a break since the beginning of the present century until the fiscal year ended March 31, 1913, when 8,681 applications were received, and the total fees amounted to \$218,125. The number of patents granted in the fiscal year 1914-15 was 6,867, as compared with 7,918 in 1913-14. Of the total number of patents granted in the fiscal years 1914-15, 4,645 were issued to inventors or assignees resident in the United States, this number being 68 p.c. of the total. Patents to Canadian inventors numbered 1,281, the other principal countries in order of the number of patents granted being Great Britain 450, Germany 107, France 83, and Australia 76. Table 54 shows the distribution of the Canadian patentees by province of residence for the years 1907 to 1915.

54.—Number of Canadian Patentees by Province of Residence for the fiscal years 1907-1915.

COPYRIGHTS, TRADE MARKS, ETC.

It will be seen from the table that the more populous provinces of Ontario and Quebec obtained the largest absolute number of patents; but a calculation of the number of patentees in relation to population shows that for the fiscal year 1915 the greatest relative inventiveness was displayed in British Columbia. Thus in this province, in 1915, one patent was granted to every 3,115 persons, the other provinces as regards the number of persons to each patent granted being placed in order as follows: Yukon 4,256, Ontario 4,306, Manitoba 4,697, Alberta 5,277, Quebec 7,206, Saskatchewan 7,461, Nova Scotia 14,919, New Brunswick 17,594, and Prince Edward Island 46,864.

COPYRIGHTS, TRADE MARKS, ETC.

The report for the year ended March 31, 1915, of the Copyright and Trade Marks Branch of the Department of Agriculture shows that the fees received for copyrights, trade marks, industrial designs and timber marks amounted to \$39,600 for the fiscal year 1914-15, as compared with \$49,409 in 1913-14. Registrations of copyright in 1914-15 numbered 1,675 against 1,835 in 1913-14, of trade marks 1,106 against 1,378, of industrial designs 224 against 165 and of timber marks 24 against 57.

VIII.—TRANSPORTATION AND COMMUNICATIONS.

Statistics of transportation and communications comprise those of steam and electric railways, express companies, shipping, canals, telegraphs, telephones and the Post Office.¹

RAILWAYS.

Steam Railways.—The increase in the railway mileage of Canada for the year ended June 30, 1915, was 4,788, as compared with 1,491 in 1914, 2,577 in 1913 and 1,327 in 1912, the increases respectively over the mileage of the previous year. The total railway mileage in actual operation on June 30, 1915, was 35,582. The railway year runs from July 1 to June 30, and the railway statistics throughout this section are for the years ended June 30. Table 1 is a statement of the railway mileage under construction; it shows that at June 30, 1915, 1,593 miles of railway were under construction, as compared with 22,891 miles under construction at June 30, 1914. It will be observed that a preponderance of the mileage under construction is located in the western provinces. Table 2 records the steam railway mileage in Canada annually from 1835 to 1915, and Table 3 the steam railway mileage of Canada by provinces for each of the seven years 1909 to 1915.

¹The statistics of railways, express companies, canals, telegraphs and telephones are taken from the Reports for the year ended June 30, 1915, of the Department of Railways and Canals, especially the Reports of the Comptroller of Statistics (Nos. 20, 20a, 20b, 20d, 20e, 1916). The shipping statistics are taken from the Report of the Department of Marine and Fisheries and the Trade and Navigation Returns. The postal statistics are from the Report of the Post Office Department.

TRANSPORTATION AND COMMUNICATIONS.

Capital Liability of Steam Railways.—During the year ended June 30, 1915, the sum of \$66,990,127 was added to the capital liability of steam railways in operation in Canada, including stocks \$2,977,412 and funded debt \$69,322,267; there was a decrease in stock of \$5,300,552, due to an adjustment of capitalization by the Canadian Northern and its subsidiary corporations. These changes bring the total capitalization of Canadian steam railways in operation to \$1,875,810,888 on June 30, 1915, as compared with \$1,808,820,761 in 1914 (Table 4). If the capitalization of railways under construction be added to that of the operating railways the total is increased to \$1,957,292,392, of which \$877,058,601 are stocks, \$176,284,882 are consolidated debenture stock, and \$903,948,909 are funded debt.

Statistics of Individual Companies.—Table 6 gives the mileage, capital, aid paid up, earnings and operating expenses of the steam railways of Canada for the year ended June 30, 1915. It shows that the aggregate earnings were \$199,843,072, a decrease compared with 1914 of \$43,240,457, or 17.8 p.c. Operating expenses in 1915 amounted to \$147,731,099, a decrease of \$31,244,159, or 17.5 p.c. The ratio of operating expenses to gross earnings was 73.9 p.c., as compared with 73.6 p.c. in 1914. The total aid paid up, as given in Table 6, amounting to \$157,568,989, includes \$114,957,286 paid by the Dominion Government, \$29,940,865 paid by the Provincial Governments and \$12,670,838 paid by municipalities.

Passengers and Freight.—Table 7, giving the statistics of steam railways from 1875 to 1915, shows that in 1915 the steam railways of Canada carried 46,322,035 passengers and 87,204,838 tons of freight, a decrease of 380,245, or 0.8 p.c., and of 14,189,151 tons of freight, or 14 p.c., as compared with 1914. The number of passengers carried in 1915 includes 4,771,004 carried by electric lines of the Canadian Northern System. The distribution of freight as between different classes of products is shown in Table 16. The proportions p.c. are for 1915 as follows: Agriculture, 18.79; animals, 3.75; mines, 37.89; forests, 16.03; manufactures, 14.76; merchandise, 6.04 and miscellaneous, 2.74.

Government Aid to Railways.—The railways of Canada have been built largely under different forms of Government aid. Tables 5 and 10 to 12 show its nature and extent. The principal forms of aid granted have consisted in land grants, cash subsidies, loans, the issue of debentures and the guarantee of bonds or interest. Aid has been granted both by the Dominion and Provincial Governments and also by municipalities. Table 5 shows the areas of the land granted as subsidies to steam railway companies by the Dominion and Provincial Governments, with the names of the companies in the case of the Dominion Government. The total area so granted up to June 30, 1915, extends to 55,740,249 acres.

RAILWAYS.

Government Railways and Subsidies.—The Dominion Government has itself undertaken the construction of the eastern portion of the new National Transcontinental Railway from Moncton, N.B., to Winnipeg, Man., and the expenditure on this line up to March 31, 1915, was \$152,802,746 (Table 14). Also the Dominion Government owns and operates the Intercolonial Railway, which extends from ocean ports in Nova Scotia and New Brunswick to Montreal, and the Prince Edward Island Railway. From 1851 up to June 30, 1915, as shown analytically in Table 11, the total value of public aid granted to steam railways in Canada, exclusive of the capital of the two government railways (I.C.R. and P.E.I.R.), amounted to \$238,831,924. Of this sum \$183,479,193 represents aid granted by the Dominion Government, \$37,437,895 that granted by the Provincial Governments, and \$17,914,836 that granted by municipalities. During 1915 the total cash subsidies paid to railways amounted to \$5,059,284, made up of \$4,644,664 paid by the Dominion Government, and \$414,620 paid by the Provincial Governments.

Aid to Railways by Dominion Government.—Table 12 shows for each year from 1875 to 1915 the amount of aid to date given to steam railways by the Dominion Government. The total at June 30, 1915, of \$302,196,840 is made up of the capital of the two government-owned lines, amounting to \$118,717,647, and \$183,479,193, representing the aid granted by the Dominion Government to other railways. The latter includes in 1912 the sum of \$4,994,417 paid to the Grand Trunk Pacific Railway Co. under the Implement Clause of the agreement between the Government and the Company. This clause provides that the Government shall make up the difference between the amount realized in certain bonds and their par value. In each year since 1886 the aid granted to other railways includes the sum of \$10,189,521 paid by the Government to the Canadian Pacific Railway Company for land taken over by the Government from the Company's land subsidy. From 1885 to 1909 the amounts in the third column represent the accumulated annual payment by the Dominion to the Quebec Government of interest at 5 p.c. on a sum of \$2,394,000 and amounting to \$119,700 on account of the transfer of the Quebec, Montreal, Ottawa and Occidental Railway. The item of \$5,160,054 in 1909 includes the payment of the principal. From 1910, the amounts include the loan of \$10,000,000 made to the Grand Trunk Pacific Railway Company under federal legislation of 1909 (8-9 Edw. VII, c. 19).

RAILWAYS.

3.—Steam Railway Mileage by Provinces, 1909-1915.

Provinces.	1909.	1910.	1911.	1912.	1913.	1914.	1915.
Ontario.....	8,229	8,230	8,322	8,546	9,000	9,255	10,702
Quebec.....	3,663	3,795	3,882	3,882	3,986	4,043	4,677
Manitoba.....	3,205	3,221	3,466	3,520	3,993	4,076	4,498
Saskatchewan.....	2,631	2,932	3,121	3,754	4,651	5,089	5,327
Alberta.....	1,322	1,488	1,494	1,897	2,212	2,545	3,174
British Columbia..	1,796	1,832	1,842	1,855	1,951	1,978	3,100
New Brunswick....	1,547	1,522	1,548	1,545	1,545	1,839	1,962
Nova Scotia.....	1,351	1,351	1,354	1,357	1,360	1,365	1,367
P. Edward Island..	269	268	269	269	279	279	275
Yukon.....	91	91	102	102	102	102	102
In United States....	—	—	—	—	225	224	398
Canada.....	24,104	24,731	25,400	26,727	29,304	30,795	35,582

NOTE.—The mileage shown in the United States relates entirely to lines which cross American territory in passing from one point in Canada to another; such lines, although not heretofore included in Canadian mileage, are operated wholly for the purposes of Canadian traffic. There is a large additional mileage in the United States, which is owned and operated by Canadian Railways, but of which no account is taken in these statistics.

4.—Capital Liability of Steam Railways, 1876-1915.

Year	Stocks.	Funded Debt.	Total.	Year	Stocks.	Funded Debt.	Total.

Electric Railways.—During 1915 the total capital liability of electric railways, which for the most part consist of urban street tramways, was increased from \$147,595,342 to \$150,344,002. Of this amount \$66,696,675 are in stocks, and \$83,647,327 are in funded debt. The number of passengers carried was 562,302,373, as compared with 614,709,819 in 1914. The freight hauled in 1915 was 1,433,602 tons, as compared with 1,845,923 tons in 1914. Gross earnings were 126,922,900, as against \$29,691,007 in 1914, and operating expenses were \$18,131,842 against \$19,107,818 in 1914. These and other particulars, with comparative figures, are set out in Tables 23-28. The number of employees in the service of electric railways on June 30, 1915, was 14,795, as compared with 16,195 in 1914. The total salaries and wages for the year 1915 were \$10,781,199, as against \$11,845,464 in 1914. The total mileage of electric railways computed as single track in 1915 was 2,103, as compared with 2,052 in 1914.

EXPRESS COMPANIES.

There are four distinctly Canadian express companies, viz., the Canadian Express Co., the Canadian Northern Express Co., the Dominion Express Co. and the British America Express Co. They are organized under powers conferred by Acts of the Dominion Parliament, and their business consists in the forwarding of parcels through the railway companies, in the transfer of luggage, and in the issue of money orders, travellers' cheques, letters of credit and other forms of financial paper. Four other express companies situated in the United States also do business in Canada. The total capital liability of the four Canadian companies on June 30, 1915, stood at \$4,882,200. The total operating mileage of all eight express companies in Canada for the year ended June 30, 1915, was 38,611, as compared with 36,648 in 1914. The gross operating receipts were \$11,311,797, compared with \$12,646,452, a decrease of \$1,334,655 in 1914. A deduction of \$5,610,224 for express privileges, that is, the amount paid to railways, steamboat and stage lines for the carrying of express matter, leaves \$5,701,573 as the operating revenue for the year. Operating expenses amounted to \$5,632,904, as compared with \$6,246,632 in 1914, and the net operating revenue to \$68,669, as compared with \$383,455 in 1914.

TRANSPORTATION AND COMMUNICATIONS.

CANALS.

Canal Systems.—There are six canal systems under the control of the Dominion Government in connection with navigable lakes and rivers. They consist of the canals (1) between Port Arthur or Fort William and Montreal; (2) from Montreal to the international boundary near Lake Champlain; (3) from Montreal to Ottawa; (4) from Ottawa to Kingston and Perth; (5) Trenton, Lake Ontario, to Lake Huron (not completed); and (6) the St. Peter's canal from the Atlantic ocean to Bras d'Or Lakes, Cape Breton. The total length of the waterways comprised within these systems is about 1,594 statute miles, the actual mileage of canals constructed being 117.2.

Canal Traffic.—For the calendar year 1915, the total volume of traffic through the canals of the Dominion amounted to 15,198,803 tons, as against 37,023,237 tons in 1914, a decrease of 21,824,434 tons, or 58.9 p.c. From Table 35 it will be seen that 91 p.c. of the decrease in 1915 occurred at Sault Ste. Marie. Of the decline of 19,848,227 at that gateway, 1,049,241 tons, or 5.1 p.c., attached to Canadian traffic and 18,798,986 tons, or 94.9 p.c., to American traffic. The decrease in both Canadian and American traffic was largely in the nature of a diversion to the American canal at Sault Ste. Marie, owing to the availability of a new and larger lock on the American side. Of the total tonnage of 15,198,803 in 1915, 6,789,423 tons, or 44.67 p.c., were Canadian and 8,409,380 tons, or 55.33 p.c., were American traffic.

Expenditure and Revenue for Canals.—In Table 40 is given the annual expenditure and revenue for canals from the beginning up to the year 1915. The column of expenditure chargeable to capital includes all the items for canals specified, and also certain items which apply to the canals as a whole; but the other columns do not include certain sums which are mostly common to all the canals, as, for instance, in 1915, \$38,924 chargeable to income, \$102,161 for staff, and \$38,075 for repairs. If these items be added, the total expenditure on the Dominion canals for the year ended March 31, 1915, was \$7,314,132, comprising \$5,490,796 charged to capital, \$444,730 charged to income, \$777,932 for staff and \$600,674 for repairs. The total capital expenditure on the canals up to March 31, 1915, was \$112,472,577, which, as shown in Table 41, includes a sum of \$34,967 chargeable to all as apart from any particular canals.

¹ The records relating to cost of construction by Imperial Government were destroyed by fire in 1852, and the statistics are not included in this table.

TRANSPORTATION AND COMMUNICATIONS.

SHIPPING.

Administration of the general shipping interests of Canada is divided between the Marine Department and the Department of the Naval Service.¹ The Marine Department includes the control, regulation, management and supervision of various services, chief amongst which are (1) administration of the Canada Shipping Act and other Acts of the Dominion Government relating to marine transportation; (2) pilotage; (3) the construction and maintenance of lighthouses, lightships, fog alarms, buoys and beacons; (4) ports, harbours, piers, wharves and breakwaters; (5) the Meteorological Service of Canada; (6) sick and distressed seamen, and the establishment, regulation and management of marine and seamen's hospitals; (7) river and harbour police; (8) inquiries into the causes of shipwrecks and casualties and the collection of wreck statistics; (9) the inspection of steamboats; (10) the construction and maintenance of the St. Lawrence River Ship Canal, and (11) the maintenance of winter communication between Prince Edward Island and the mainland. The net revenue of the Marine Department for the fiscal year ended March 31, 1915, derived principally from fees, was \$795,550, and the expenditure for the same period was \$6,202,908. The revenue includes the sum of \$493,000 for the steamer "Earl Grey," sold to the Russian Government.

Of the following statements, Tables 42-49 are compiled from the Reports of the Department of Customs, and Tables 50 to 57 are from the Reports of the Department of Marine.

¹For information relating to the Department of the Naval Service, see page 651.

¹Nine months.²Includes \$493,000 sale of steamer "Earl Grey" sold to Russian Government.

TRANSPORTATION AND COMMUNICATIONS.

TELEGRAPHS.

The Canadian Telegraph Systems include lines owned and operated by the Dominion Government and the lines owned and operated by railway and telegraph chartered companies. The Government telegraph service for the year ended March 31, 1915, had a total length of 11,497 miles of lines of which 314 knots, calculated as statute miles, were submarine cables. During the year 1914-15 about 1,185 miles of new lines were constructed. The number of offices was 870, and the messages sent numbered 377,849. Details as to the location of the lines and points connected are given in the Report for March 31, 1915, of the Minister of Public Works (No. 19, 1916). The total expenditure on the Government telegraph lines for the year was \$632,677, and the receipts were \$225,944, signal service messages, meteorological service messages and fisheries bulletins being handled free. Table 58 gives the telegraph statistics for the years ended June 30, 1909-15, of the chartered companies, as compiled from information supplied to the Census and Statistics Office. Two companies failed to report for 1915.

Telegraph Statistics.—The report on telegraph statistics for 1915, issued by the Department of Railways and Canals, shows that the number of land messages handled by telegraph organizations in the year ended June 30, 1915, was 9,952,135, as compared with 11,980,869 in 1914. Cablegrams numbered 977,389, as compared with 983,061 in 1914. Employees in the service of telegraph organizations numbered 6,243, of whom 3,677 were male and 333 were female operators; other officers and employees numbered 2,233. Salaries and wages amounted to \$2,946,327, as compared with \$3,214,140 in 1914. The aggregate of salaries and wages in 1915 was equal to 71.3 p.c. of operating expenses, as compared with 75.8 p.c. in 1914.

Wireless Telegraph Coast Stations.—Table 59 shows the name, situation and range in nautical miles of the radiotelegraph or wireless telegraph coast stations, as operated by the Department of the Naval Service, and Table 59 the number of messages and words handled and the cost of maintenance for the stations of the east and west coasts and of the Great Lakes. For the year 1914-15 the total number of messages was 174,017, as compared with 312,560 in 1913-14, and of words handled 3,055,543, as compared with 4,869,262 in 1913-14.

TELEPHONES.

The report for 1915 of the Department of Railways and Canals on Telephone Statistics shows that the number of telephones in Canada in 1915 was 533,090, as compared with 521,144 in 1914, and the wire mileage was 1,452,360 in 1915, as compared with 1,343,090 in 1914. In 1915 the gross revenue from telephones was \$17,601,673, as against \$17,297,269, and the net revenue \$4,764,958 as against \$4,414,867. The number of telephone employees was 15,072, as compared with 16,799, and the salaries and wages amounted to \$8,357,029, as compared with \$8,250,253. The general progress of telephones in Canada since 1912 is shown in Table 61.

TRANSPORTATION AND COMMUNICATIONS.

POSTAL STATISTICS.

The Post Office Department reports an increase in the fiscal year 1914-15 of 1,652 miles in the system over which the mails are carried by railway, thus bringing the total actual track mileage for the carriage of mails to 31,356 on March 31, 1915. The total mileage of mail conveyance in the fiscal year 1915 was 61,818,400, of which 36,714,540 was by railway, 2,440,968 was by water, and 22,662,892 was by stage or road. The total represents an increase in mileage, as compared with 1914, of 3,200,507, of which 2,048,259 was by railway, 31,319 by water and 1,120,929 by road. The expenditure of the Department increased by \$3,139,133, and the deficit from the operations of the Service was \$2,914,542. At the end of the calendar year 1915 there were 3,432 rural mail delivery routes, on which were erected 154,183 boxes; the corresponding figures for the calendar year 1914 were 2,737 routes and 116,683 boxes.

IX.—LABOUR.

The Department of Labour of the Dominion Government was established in 1900, under authority of the Conciliation Act, 1900 (63-64 Vict., c.24), its chief duties originally comprising the administration of certain provisions of this statute designed to aid in the prevention and settlement of labour disputes, the administration of the Government's fair wage policy for the protection of workmen employed on Dominion Government contracts and works aided by grant of public funds, the collection and classification of statistical and other information relative to conditions of labour and the publication of a monthly journal known as the "Labour Gazette." From 1900 to 1909, the Department was administered by the Postmaster-General, who was also Minister of Labour. It was constituted a separate Department under the Labour Department Act, 1909 (8-9 Edw. VII, c.22).

The work of the Department was greatly increased in 1907 by the passage of the Industrial Disputes Investigation Act, 1907 (6-7 Edw. VII, c. 20), which was designed to aid in the prevention and settlement of strikes and lockouts in mines and industries connected with public utilities. The Department is also charged with the administration of the Combines Investigation Act, 1910 (9-10 Edw. VII, c. 9). The scope of the Department has increased in other directions, especially in the investigation of the wholesale and retail prices of Canadian commodities and of questions affecting the cost of living. A change has been made in the "Labour Gazette" year, which will in future terminate on December 31 instead of on June 30. The volume for 1915-16, which under the former plan would terminate on June 30, 1916, will be extended to include the remainder of that calendar year.

Labour Conditions in 1915. According to a review of industrial conditions which appeared in the January, 1916, issue of the "Labour Gazette," the opening of the year 1915 showed a marked change from the situation existing at the commencement of 1914. At the beginning of that year, the depressed conditions of the previous year were still apparent; but in 1915 the improvement which became noticeable from month to month during the latter part of the previous year had become fairly well pronounced, and the close of 1915 witnessed a return to almost normal conditions in many respects. While at the close of 1914 there was still considerable unemployment, and in some localities this condition existed during the early months of 1915, the gradual enlistment of men for overseas service, the employment of others in the manufacture of munitions and other military supplies, in agricultural and lumbering operations, and the heavy falling off in immigration, all combined to bring conditions in many parts of the Dominion back to practically a normal basis so far as employment was concerned. Manufacturing in many lines outside of special activity in the manufacture of munitions of war was improved; lumbering showed activity practically throughout the year; fishing on the whole was good; mining, both coal and metal, resumed activity, and towards the latter part of the year was back to, if not above the normal standing of previous good years. Outside of building operations which continued to be dull, practically all the Dominion's industries showed

LABOUR CONDITIONS IN 1915.

great improvement. Immigration which in 1914 showed a heavy falling off from the previous year, continued to decrease in 1915, the total reduction being about 70 per cent. While there was a large falling off in imports there was a heavy increase in exports and the aggregate trade for the year was several millions greater than in 1914. Railway construction on the whole was quiet, though some work was carried on in connection with new lines in Alberta and British Columbia, and on some of the large established railways. Transportation also showed a better year. Agriculture gave the best returns on record. Crops were uniformly good all over the country, with the exception of potatoes, which in the large producing districts were only half a crop. Wages remained at about the same level as in 1914, though there were a number of changes, mostly in the nature of increases. During the first nine months of the year 45 changes were reported, compared with 46 the previous year. Of these changes 22 involved increases, 18 a reduction of wages, four a reduction of hours and one an increase in hours. During the last quarter of the year three changes occurred, all increases and all affecting the mining industry, several thousand employees being concerned.

Labour Organization.—The total trades union membership reported at the end of 1915 was 143,343, being comprised in 1883 local branches of trade union organizations of all types. The membership reported at the close of 1914 was 166,163, comprised in 2,003 branches. There was therefore a decrease of 22,820 members and 120 branches during the year. Of the total trades union membership for 1915, 114,722 were members of international organizations, which have 1,661 local branches in Canada. The remaining 28,621 were members of national and independent bodies. There was a loss of 22,820 in the membership of international organizations, a gain of 2,725 among independent bodies and an increase of 211 in national unions. From the outbreak of the war to the end of the year, it was reported to the Department that 11,972 trade unionists in Canada enlisted for the war and 439 reservists rejoined the colours, making a total of 12,411 members of 961 labour organizations who joined the army. The actual number was probably somewhat greater than this, as information was not received from all the local unions with regard to the enlistment of their members.

Industrial Disputes.—The number of strikes and lockouts in Canada reported to the Department of Labour during 1915 was 43, the lowest number recorded since 1901, when the Department first collected statistics relating to strikes, and one less than in 1914, the previous lowest record. There was a decrease in the number of establishments affected from 205 to 96, but an increase in the number of employees concerned from 8,678 in 1914 to 9,140 in 1915. The estimated loss of time in working days was 106,149 in 1915, as compared with 430,054 in 1914. The number of trade disputes which began in 1915 was 38, five disputes being carried over from the previous year. The greatest number of disputes occurred in the province of Ontario, 16 disputes being recorded from this province. There were eight disputes in Nova Scotia, five each in Quebec and British Columbia, four each in Manitoba and Alberta and one in New Brunswick.

LABOUR.

Table 1 shows the time losses involved in the various classes of industries from 1901 to 1915, Table 2 the number of disputes year by year from 1901 to 1915, the classes of industries affected, the number of establishments and of employees concerned, and the approximate time losses in working days, and Table 3 the number of disputes, classified by industries, from 1901 to 1915.

Proceedings under the Industrial Disputes Investigation Act.—

A review of the proceedings which have occurred under the Act during the nine-year period ended March 31, 1916, shows that 191 applications were received for the establishment of Boards of Conciliation and Investigation, as a result of which 169 Boards were established. In 22 cases the matters in dispute were adjusted by mutual agreement, while steps were pending for the establishment of Boards, or the necessity for procedure disappeared. The total number of employees affected by these 191 disputes was 246,641, or an average of 1,291 for each dispute. There were 20 cases in which strikes were neither averted nor ended through the instrumentality of the Act. Eleven of these 20 strikes occurred in the mining industry, one in the operation of street railways and one in the operation of municipal electrical work. Seventeen applications under the Act were dealt with during the year ended March 31,

LABOUR.

COURSE OF WHOLESALE PRICES IN CANADA, 1890-1915.

Number of Commodities: 272. Average Prices, 1890-1899=100.

PRICES OF COMMODITIES IN CANADA.

1916, Boards being established in 14 cases. In the remaining three cases proceedings were stayed to permit of negotiations between the parties concerned, which resulted in settlements being affected without the establishment of Boards.

Fair Wages Branch.—The Fair Wages Branch of the Department of Labour is charged with the preparation of schedules of minimum wage rates, which are inserted in Dominion Government contracts, and must be adhered to by contractors in the execution of the respective works. The number of Fair Wages Schedules prepared since the adoption of the Fair Wages Resolution in 1900 is 3,498, of which 122 were prepared during the calendar year 1915.

PRICES OF COMMODITIES IN CANADA.

Wholesale Prices.—The Special Report on Wholesale Prices in Canada during the 20 years 1890-1909, issued by the Department of Labour in 1910, has been followed by similar annual reports for each year 1910 to 1915. The changes in prices are measured by index numbers which are percentages of the average prices during the decade 1890 to 1899. The list includes 230 commodities from 1890 to 1909 and 272 commodities from 1910 to 1915, and is divided into thirteen groups. The tables and diagrams show the course of prices by groups for each year back to 1890 and by months during 1914 and 1915.

From Table 1 and the diagrams on page 526 it will be seen that wholesale prices rose very steeply during 1915, especially in the latter part of the year, the rise being marked chiefly in grains, other farm products and foods during the latter part of 1914 and the early part of 1915 and in materials during the latter part of the year, especially textiles, metals, metal products and chemicals.

Retail Prices.—Since January, 1910, the Department of Labour has secured each month the retail prices of some thirty staple foods, coal, wood and coal oil, and prevailing rates for rent for a six-roomed house in some 60 localities in Canada, 10,000 or over in population. These returns have been published each month in the "Labour Gazette." Similar statistics were obtained for December, 1900 and 1905, for the Board of Inquiry into the Cost of Living. From these figures calculations of typical weekly expenditures have been made in terms of the average prices for each year. The prices for the years 1910 to 1914 were given in the Canada Year Book, 1914, page 534. The prices by months in 1915 and for the year 1915 are given in Table 6. Retail prices of food rose during 1914 and 1915, fuel and light averaged slightly lower, and rent was down in both years, but began to recover in the latter part of 1915.

X.—FINANCE.

Under the general heading of Finance in Section X are grouped statistics relating to the public accounts of the Dominion Government, including revenue and expenditure, public debt, assets and liabilities, coinage and inland revenue. Tables have been added showing the receipts and expenditure of each of the nine provincial governments of Canada, and these are followed by municipal statistics, values of building permits and statistics of banking, insurance and loan companies and building societies.

PUBLIC ACCOUNTS.

Financial System.—The Canadian system of public finance, which is based upon that of the British, includes a Consolidated Fund to which are credited and out of which are paid the revenues and expenditures properly relating to the fiscal year ending March 31. There are also miscellaneous accounts dealing with loans, debt-redemption, railway administration, capital expenditure on public works and a variety of other subjects. During the four fiscal years 1910-13 the revenue on Consolidated Fund Account annually expanded; so that the receipts in each of these years were larger than in any previous one. Thus, as shown in Table 2, the total receipts, which were \$101,503,711 in 1910—the first time that they exceeded \$100,000,000—rose to \$168,689,903 in 1913. In 1914 they were \$163,174,395 and in 1915 they were \$133,073,482.

Consolidated Fund.—Table 1 shows by principal items the receipts and expenditures and the surplus on Consolidated Fund Account for the fiscal years 1911 to 1915. Table 2 for the period 1868 to 1915 differentiates between receipts from customs and excise (taxes), and receipts from other sources, and shows the surplus or deficit each year on Consolidated Fund Account. From this table it will be seen that during the 48 years that have elapsed since Confederation surpluses have accrued in 35 years and deficits were incurred in only 13. Tables 3-5 record details of the revenue and expenditure on Consolidated Fund Account. Tables 6 and 7 show the total annual expenditure and receipts, including the expenditure and receipts on Consolidated Fund Account and extraneous items not credited or debited to that account.

Public Debt.—Tables 9-12 relate to the Public Debt, showing in Tables 9-11 the amounts at which the various items stood in each year from Confederation, and in Table 12 particulars of the loans forming part of the Funded Debt. On March 31, 1915, the net public debt was \$449,376,083, which on the basis of the estimated population of 8,136,000 in 1915 represents 55.23 per head, an increase of 13.41 as compared with 1914. As compared with 1914 the net public debt shows an increase of \$113,379,233, or \$13.93 per head, the increase being due to the war.

NOTE.—The years marked with an asterisk(*) are those of the Census, April 2, 1871, April 4, 1881, April 6, 1891, April 1, 1901, June 1, 1911. In all other cases the population is estimated at the close of each fiscal year: June 30 from 1871 to 1906 and March 31 from 1907 to 1915. The fiscal period of 1907 is for the nine months ended March 31.

FINANCE.

Provincial Subsidies.—Tables 13 and 14 show the amounts of the subsidies and other payments made by the Dominion to the provincial governments for each of the years 1910 to 1915 (Table 13) and the totals paid from Confederation to date (Table 14). The provincial subsidies payable by the Dominion Government were originally settled by the British North America Act, 1867 (30 and 31 Vict., c. 3, s. 118), but were revised by the British North America Act, 1907 (7 Edw. VII, c. 11). Under the revised settlement each provincial government receives (a) a fixed grant according to population and (b) a grant at the rate of 80 cents per head of the population up to 2,500,000, and at the rate of 60 cents per head of so much of the population as exceeds that number. The province of British Columbia receives an additional

PUBLIC ACCOUNTS.

grant of \$100,000 per annum for a period of 10 years from 1907¹. An additional grant of \$100,000 per annum is payable to Prince Edward Island under an act of 1912 (2 Geo. V., c. 42), and the payments to Manitoba were revised by the Extension of Boundaries (Manitoba) Act (2 Geo. V., c. 32). Other payments to the provincial governments by the Dominion Government consist of special grants as compensation for lands and allowance for buildings, allowances in lieu of debt, etc.

INLAND REVENUE.

Department of Inland Revenue.—Under the Inland Revenue Act (R.S. 1906, c. 51) the Department has the control and management of the collection of excise duties, of stamp duties, internal taxes, standard weights and measures and of the collection of bridge and ferry tolls and rents. It administers the statutes which deal with the adulteration of food and other articles, electricity and gas inspection, patent medicines, petroleum, naphtha and the analysis of fertilizers and feeding stuffs. The Department also establishes the food standards, which are put into force from time to time by Orders-in-Council under the authority of Section 26 of the Adulteration Act. For the year ended March 31, 1915, the total inland revenue of the Dominion amounted to \$22,084,931, as compared with \$21,877,891 in 1914.

INLAND REVENUE.

Canadian Excise Tariff.—The following is a statement of the Canadian excise tariff, as amended by Parliament during the session of August 18-22, 1914:

Spirits—	Tobacco, per lb.....	\$0.10
When made from raw grain, per proof gal.....	Cigarettes, weighing not more than 3 lb. per m., per thousand.....	3.00
When made from malted barley..	Cigarettes, weighing more than 3 lb. per m., per thousand.....	8.00
When made from imported molasses or other sweetened matter free of Customs duty, per proof gal.....	Foreign raw leaf tobacco, unstemmed, per lb.....	0.28
Malt, per lb.....	Foreign raw leaf tobacco, stemmed, per lb.....	0.42
Malt, imported, crushed or ground per lb.....	Canada twist tobacco, per lb....	0.10
Malt liquor when made in whole or part from any other substance than malt, per gal.....	Snuff, per lb.....	0.10
Vinegar, per proof gal.....	Cigars, per m.....	3.00
Acetic acid, per proof gal.....	Cigars when put up in packages of less than 10 each, per m.....	4.00

Consumption of Alcohol and Tobacco.—The separate sources of revenue for the years 1910 to 1915 are set out in Table 16. The two largest sources of inland revenue are spirits and tobacco, which in 1915 together accounted for over 81 p.c. of the total. As is apparent from Tables 18 and 19 the consumption of alcoholic liquors and of tobacco has tended annually to increase both absolutely and relatively per head of the population. For 1913-14 the quantity of spirits taken out of bond for consumption was 4,762,618 gallons, as compared with 4,999,937 gallons in 1912-13, and of malt liquor 56,060,846 gallons, as compared with 52,314,400 gallons. But for the fiscal year 1914-15 there was an appreciable diminution, the consumption of spirits falling to 4,021,090 gallons and of malt liquor to 47,963,225 gallons. Of tobacco the quantity consumed was 24,444,380 lb. in 1914-15, as compared with 25,735,773 lb. in 1913-14. The number of cigars was 236,866,542 in 1914-15, as against 288,219,892 in 1913-14. The consumption per head is worked out in Table 19 as 0.872 gallon of spirits, 0.095 gallon of wine, 6.071 gallons of beer, and 3.427 lb. of tobacco, including cigars, the corresponding figures in 1914 being 1.061 gallon of spirits, 0.124 gallon of wine, 7.2 gallons of beer and 3.711 lb. of tobacco.

Electric Light and Power.—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the production of electrical energy for export is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both acts are administered by the Department of Inland Revenue, and the statistics published in connection therewith are given in Tables 21 and 22.

PROVINCIAL PUBLIC ACCOUNTS.

Tables 23 and 24 show for the latest financial year for which reports have been published the receipts and expenditure of each of the nine provincial governments of Canada, Table 23 giving totals and per capita figures, and Table 24 the detailed items. The total revenue of the nine provinces for the period covered amounts to \$49,002,216, and the total expenditure to \$54,222,360. The largest revenue is that of Ontario, \$12,975,732, Quebec being next with \$9,597,926 and British Columbia third with \$7,974,496. In the total expenditure for the year that of Ontario was highest, \$12,704,362, British Columbia second with \$11,942,667, and Quebec third with \$9,959,171. Per capita the largest revenues are in British Columbia, \$16.33, and Manitoba \$10.21, the same provinces having also the greatest expenditures per capita, viz., British Columbia \$24.46 and Manitoba \$11.24.

MUNICIPAL STATISTICS.

Tables 25-27 represent further efforts to collect municipal statistics. The particulars given were returned on a schedule addressed to the clerks of cities and towns throughout Canada having a population of 5,000 and over according to the Census of 1911. Certain municipalities failed to return the schedule and could not, therefore, be included in the tables, which relate to 67 cities and towns. Table 25 gives the general statistics relating to population, area, incorporation and mileage. The population figures are those of the local assessment, except where italicised, in which cases the population is as returned by the Census of 1911. The street mileage is distinguished as between macadamized roads and permanent roads, the latter including asphalt, tar-macadam and other forms of permanent roadway. In a few municipalities the macadam roads include or consist of gravel, rocmac, graded or rocked roads; also in some municipalities the sewer mileage includes storm sewers as well as sanitary sewers. In Table 26, showing the assessment and valuation of property, the headings are abbreviated in order to save space; they show the amount of the local improvement assessment; under the column headed "Exemptions" the value of property exempt from taxes or liable for local improvements only; the assessed valuation of all taxable property; the general assessment rate in mills on the dollar; and the total amount of taxes levied. Table 27 shows receipts, expenditure, debentures, sinking funds, assets and liabilities. The figures throughout relate to the calendar year, and the amounts of the debentures, sinking funds, assets and liabilities are as standing at the close of the year.

Ontario Hydro-Electric Power Commission.—The Canada Year Book of 1910 (p. xliii) described the installation on October 11, 1910, at Berlin, now Kitchener, Ontario, of electrical energy generated by the Niagara Falls and the initial work carried out by the Ontario Hydro-Electric Power Commission for the supply of electrically generated power to 15 municipalities. During the last six years the operations of the Commission have rapidly extended until in 1916 not less than 69 Ontario municipalities derive electrical power from the Niagara Falls and other Ontario water systems of the Commission. Table 28, on pages 570 and 571, gives for 1914 the financial statistics of the electrical installations of these 69 municipalities. It shows that the total cost of the plant erected was \$12,901,126, that the cost of operations for the year 1914 was \$2,674,699, and that the revenue was \$3,433,931, leaving a surplus of \$759,232. The total number of consumers in the 69 municipalities for 1914, was 96,744, of whom 75,147 were domestic, 18,032 were commercial and 3,565 were power consumers. The total horse power taken was 70,698.

BUILDING PERMITS.

Building Permits.—Table 29, from the Labour Gazette of March, 1916, shows the value of the building permits issued by cities and towns for each of the years 1914 and 1915. The figures include only those places where the value of the building permits for the year were \$100,000 or over. For the year 1915 the total value of the building permits in the table was \$36,099,458, as compared with \$102,182,831 in 1914,—a decrease of \$66,083,373. Not included in the total for 1915 is one place with a building permit amounting to \$104,166 in value, for which there are shown no corresponding figures for 1914.

29.—Values of Building Permits over \$100,000 taken out in Cities and Towns in 1914 and 1915. [From the Labour Gazette of March, 1916.]

BANKING.

The total assets of the chartered banks at December 31, 1915, were \$1,737,992,244, as compared with \$1,555,556,815 in 1914. The total liabilities were \$1,499,283,690, as compared with \$1,314,646,254. Deposits by the public in Canada were \$1,144,680,651 at December 31, 1915 (Table 32), as compared with \$1,012,739,990 in 1914. On March 31, 1915, the total at the credit of depositors in the Post Office and Dominion Government Savings Banks was \$54,001,416, as compared with \$55,567,449 in 1914. Table 30 affords some measure of banking progress in Canada by a comparison of the number of branches at different periods. The number has grown from 123 at Confederation to 3,160 in 1916.

FINANCE.

LOAN AND TRUST COMPANIES.

Loan and Trust Companies.—In previous issues of the Year Book tables have been given of the assets and liabilities, with comparative figures for a series of years, of loan companies and building societies. These tables have been taken from the "Annual Report of the Affairs of Building Societies, Loan and Trust Companies in the Dominion of Canada," as issued by the Department of Finance. The statistics in this Report have been compiled by the Department of Finance partly from the statements required to be furnished under legislation of the Dominion Parliament and partly from returns voluntarily made by corporations operating under provincial charters. The laws relating to loan and trust companies incorporated by Acts of the Parliament of Canada were revised by the Loan and Trust Companies Acts of 1914 (4-5 Geo. V, cc. 40 and 55), and since the passing of these Acts the Annual Report issued by the Department of Finance up to and including the year 1913, has been replaced for the years 1914 and 1915 by "Annual Statements of the Loan and Trust Companies incorporated by Acts of the Parliament of Canada." Tables 47 and 48 show therefore the liabilities and assets of the loan and trust companies as compiled from these statements. They relate to 14 loan and 13 trust companies, and do not include companies or societies operating under provincial charters.

47.—Liabilities and Assets of Loan Companies, 1914 and 1915.

COMMERCIAL FAILURES.

Commercial Failures in Canada, 1915.—According to Bradstreet's of January 8, 1916, the total number of Canadian failures reported during the calendar year 1915 was 2,621, with liabilities of \$31,989,105. In number there was a decrease in 1915 of 9.1 p. c., as compared with 1914, while the liabilities increased by 4.2 p. c. Dun's Review of the same date gives the total number of Canadian insolvencies in 1915 as 2,652, as compared with 2,892 in 1914, whilst liabilities reached in 1915 the total of \$40,676,621, as compared with \$34,996,694 in 1914. Tables 49 to 51 give the statistics from both authorities, those from Bradstreet's (Table 49) being classified by provinces for the calendar years 1914 and 1915 and those for Dun's Review including Newfoundland, being classified by branches of business for the calendar years 1913 to 1915 (Table 50) and by classes and provinces for the calendar year 1915, with totals for the years 1906 to 1914, including Newfoundland (Table 51).

FINANCE.

GOVERNMENT ANNUITIES.

Under the Government Annuities Act, 1908 (7-8 Edw. VII, c. 5), His Majesty the King, represented by the Minister (at present the Postmaster General), may sell to persons domiciled in Canada immediate or deferred annuities of not less than \$50 nor more than \$1,000 (1) for the life of the annuitant; (2) for a term of years certain, not exceeding twenty years, provided the annuitant shall so long live; (3) for a term of years certain, not exceeding twenty years, or for the life of the annuitant, whichever period shall be the longer; and (4) an immediate or deferred annuity to any two persons domiciled in Canada during their joint lives, and with or without continuation to survivor. The property and interest of any annuitant in any contract for an annuity is neither transferable nor attachable. Except upon the occurrence of invalidity or disablement of an annuitant, no annuity on a separate life is payable unless the annuitant has reached the age of 55. The purchaser may contract that in the event of the death of the annuitant before the date fixed for the annuity to begin all money paid shall be refunded to his heirs with interest at the rate of three per cent., compounded yearly. Statistics of the annuities in force on March 31, 1916, are given in Tables 52-54. From September 1, 1908, to March 31, 1916, 4,022 annuities have been issued, of which 102 have been cancelled on account of death, leaving on March 31, 1916, 723 immediate annuities and 3,197 deferred annuities, a total of 3,920 contracts in force. The total value of these annuities is \$849,950.73, and the amount received for annuities purchased is \$2,884,407.80.

52.—Number of Immediate Annuities of each amount paid in full from September 1, 1908, to March 31, 1916.

FINANCE.

INSURANCE.

Insurance Statistics.—Insurance companies doing business throughout the Dominion of Canada are licensed by the Dominion Government under acts administered by an Insurance Department under the Minister of Finance. The insurance statistics in Tables 55-77, which are restricted to companies doing business under license from the Dominion Government and do not, therefore, include the business of companies operating under license from the provincial governments, are compiled from the Reports of the Superintendent of Insurance, and are divided into three classes relating (1) to insurance against fire; (2) to life insurance and (3) to insurances of a miscellaneous character covering risks of accident, guarantee, employer's liability, sickness, burglary, hail, steam boilers, tornado, weather, inland transportation, automobiles, sprinkler leakage, live stock and title. They refer in all cases to the calendar year.

The year 1914 is the latest for which complete and final statistics of the Insurance Department are available; but, wherever possible, figures for 1915 have been given from the "Abstract of Statements of Insurance Companies in Canada," issued, subject to correction, on March 3, 1916. For fire insurance business transacted in Canada it has been this year possible to give, subject to revision, the figures for 1915 (Table 56), as well as the finally corrected figures for 1914 (Table 55). Similarly, for insurance other than fire and life, the unrevised figures for 1915 have been given in Tables 73, 75 and 77, in addition to the finally corrected figures for 1914 in Tables 72, 74 and 76. In all cases the figures for 1915 are liable to final revision after publication of the complete report for that year.

Fire Insurance.—Fire insurance in Canada was carried on in 1914 by 82 companies, including 24 Canadian, 24 British, 31 United States and three French. As compared with 1913, this is a decrease of two companies. The gross amount of fire policies, new and renewed, taken during the year 1915, was \$3,111,552,503, as compared with \$3,104,101,568 in 1914 and \$2,925,200,553 in 1913. Premiums charged in 1915 amounted to \$36,048,345, as compared with \$36,185,927 in 1914 and \$36,032,460 in 1913. The net amount at risk in 1915 was \$3,531,620,802.

Life Insurance.—The business of life insurance in Canada was transacted in 1914 by 45 active companies, including 27 Canadian, seven British, one colonial and 10 United States. The total life policies taken out during the year 1914 amounted to \$217,006,516, as compared with \$231,608,546 in 1913, a decrease of \$14,602,030. The policies effected by the Canadian companies amounted to \$125,505,324, a decrease of \$5,988,258; those of the British and colonial companies amounted to \$9,294,590, an increase of \$2,343,895, and those of the United States companies to \$82,206,602, a decrease of \$10,957,667. The total amount of life insurance in force in Canada for the year 1914 at the date of the statements rendered was \$1,242,160,478, an increase over 1913 of \$73,570,451, these figures being distributed among the three different classes of companies as follows: Canadian, \$794,520,423 (increase, \$43,882,521); British and colonial, \$60,770,658 (increase, \$2,593,683); United States, \$386,869,397 (increase, \$27,094,067).

INSURANCE.

Life Insurance on the Assessment Plan.—Table 71 gives the statistics of life insurance on the assessment plan, that is, insurance effected through fraternal or friendly societies by assessments on the members thereof and with annual dues to meet expenses. The statistics in these tables relate, however, only to the four societies reporting to the Insurance Department of the Dominion Government, viz., the Catholic Mutual Benefit Association, the Commercial Travellers' Mutual Benefit Society, the Independent Order of Foresters (whose statistics include sick and funeral departments) and the Woodmen of the World.

Insurance Other than Fire or Life.—Insurance business other than fire or life was carried on in Canada in 1914 by 71 companies: 26 Canadian, 13 British and 32 United States. Thirty of these companies also transacted fire insurance. In addition there were five fraternal orders or societies which carried on sickness and life insurance. Of the 26 Canadian companies, which carried on business other than fire or life in 1914, 21 transacted miscellaneous classes of business only. The combined assets of these 21 companies amounted in 1914 to \$8,306,597, and their total liabilities to \$2,656,464, the excess of assets over liabilities being thus \$5,650,133. For the year 1915, 21 of these companies had total assets amounting to \$7,426,020 and liabilities amounting to \$2,017,044, the excess of assets over liabilities being \$5,408,976.

XI.—ADMINISTRATION.

PARLIAMENTARY REPRESENTATION.

Representation of Provinces.—The four original provinces of the Dominion were Ontario, Quebec, Nova Scotia and New Brunswick, which were given parliamentary representation according to Section 37 of the British North America Act, 1867. By Imperial Orders in Council the provinces of British Columbia and Prince Edward Island were admitted into the Dominion, the former on July 20, 1871, by Order dated May 16, 1871, and the latter on July 1, 1873, by Order dated June 26, 1873. An Act of the Dominion Parliament of May 12, 1870 (33 Vict., c. 3), provided for the formation of the province of Manitoba out of Rupert's Land and the Northwest Territories, so soon as these should be admitted into the Dominion of Canada, which admission was effected by Imperial Order in Council dated June 23, 1870, and taking effect on July 15, 1870. In consequence of doubts as to the legal validity of the Dominion Act of 1870 (33 Vict., c. 3), the Imperial Parliament Passed an Act in 1871 (34-35 Vict., c. 28) making the Canadian Act valid and effectual.

Parliament of Canada.—The Parliament of the Dominion of Canada consists of the Senate with 87 members and of the House of Commons with 221 members, senators being appointed for life by the Governor-General and members of the House of Commons being elected by the people. The limit of duration for each parliament is five years¹. A Redistribution Act passed after each census readjusts the number of representatives in the House of Commons in accordance with rules laid down in Section 51 of the British North America Act, 1867, of the Imperial Parliament (30-31 Vict., c. 3). These rules provide that the province of Quebec shall always have the fixed number of 65 members, and that there shall be assigned to each of the other provinces such a number of members as will bear the same proportion to the number of its population (ascertained by the census)-as the number 65 bears to the population of Quebec.

The Senate.—The numerical representation of the Senate by provinces is as follows: Prince Edward Island 4, Nova Scotia 10, New Brunswick 10, Quebec 24, Ontario 24, Manitoba 4, Saskatchewan 4, Alberta 4, British Columbia 3. Total 87.

House of Commons.—The present representation of the people in the House of Commons is in accordance with Acts of the Dominion Parliament passed in 1903, 1904 and 1907 (3 Edw. VII, c. 60; 4 Edw. VII, c. 35; 6-7 Edw. VII, c. 41). The provinces of Saskatchewan and Alberta were created by Acts of the Dominion Parliament passed in 1905 (4-5 Edw. VII, cc. 3 and 42), and after the Northwest Census of 1906 the Representation Act was amended by an Act of April 27, 1907 (6-7 Edw. VII, c. 41), which gave Saskatchewan ten members and Alberta seven members after the next ensuing election of October 26, 1908. The seven additional members thus given to Saskatchewan and Alberta brought the representation of Canada in the House of Commons

¹By Act of the Imperial Parliament (6-7 Geo. V. c. 19), passed June 1, 1916, and intituled an act to amend the British North America Act, 1867, the duration of the existing Parliament of Canada was extended until October 7, 1917.

DOMINION PARLIAMENTS.

up to 221 as stated above. By the Representation Act, 1914 (4-5 Geo. V, c. 51), which was assented to on June 12, 1914, it is provided that the House of Commons shall consist of 234 members, distributed by provinces as follows: Prince Edward Island 3, Nova Scotia 16, New Brunswick 11, Quebec 65, Ontario 82, Manitoba 15, Saskatchewan 16, Alberta 12, British Columbia 13 and Yukon Territory 1. This Act will take effect after dissolution of the present (12th) Parliament. Tables showing the population and representation in the House of Commons according to the districts of the Representation Acts were included in the Canada Year Book of 1913, pp. 587-593. A numerical record of the parliamentary representation at different dates since Confederation was published in previous issues of the Year Book (see Year Book 1911, p. 28).

COMMISSION OF CONSERVATION.

Origin.—The Commission of Conservation was created in 1909 in response to a strong and growing public demand for a more efficient system of national economy with respect to the administration and development of Canada's natural resources. The United States had recently entered upon a national conservation policy, and when President Roosevelt invited Canada, Newfoundland and Mexico to participate in a North American Conservation Conference at Washington in February, 1909, the Hon. Clifford Sifton, the Hon. Sydney Fisher and Dr. Henri S. Béland were delegated to represent the Dominion. The Conference adopted a Declaration of Principles, including a recommendation that a permanent conservation commission be appointed by each country concerned. To give effect to this recommendation, the Parliament of Canada unanimously enacted a law, assented to on May 19, 1909, providing for the creation of such a body. By Order-in-Council under date of September 3rd of the same year, the members of the Commission, thirty-two in number, were duly appointed, and the Hon. Clifford Sifton was named as Chairman.

Constitution.—The membership of the Commission is honorary and non-partisan in character. The ex-officio members include the federal Ministers of the Interior, of Agriculture and of Mines and the member of each provincial government of Canada who is charged with the administration of the natural resources of such province. In addition to the ex-officio members, twenty commissioners are appointed by the Governor-in-Council to hold office during pleasure; at least one appointed member from each province must be a member of the faculty of a university within the province. Not only is the

COMMISSION OF CONSERVATION.

personnel of the Commission truly representative of the entire Dominion, but Parliament legislated with the further object of ensuring in its membership a high degree of scholarship, of scientific knowledge and of administrative experience.

In function and status the Commission is purely advisory. While dependent financially upon an annual appropriation from the federal Parliament, it forms no portion of the ordinary governmental administration and possesses no executive or administrative powers. It is authorized solely to study, investigate and advise; the effectiveness of its work depends upon the merit of its recommendations which must, accordingly, be in every instance based upon complete and accurate information. Referring in his inaugural speech to the exceptional character of the Commission, the Chairman tersely defined its status as follows: "In a sentence, the Commission is a body constituted for the purpose of collecting exact information, deliberating upon, digesting and assimilating this information so as to render it of practical benefit to the country, and for the purpose of advising upon all questions of policy that may arise in reference to the actual administration of natural resources where the question of their effective conservation and economical use is concerned."

Organization and Work.—Broadly speaking, the efforts of the Commission have been directed mainly toward: (1) the taking of an inventory of Canada's natural resources; (2) the moulding of public opinion and the advising of administrative authorities with regard to more intelligent management of the same. For efficient organization the Commission formed itself into seven committees dealing respectively with Lands, Forests, Waters and Water Powers, Minerals, Fisheries, Game and Fur-Bearing Animals, Public Health, and Press and Co-operating Associations. Under the direction of these committees, field investigations respecting various natural resources have been undertaken by a staff of technical experts; substantial progress has been made in the task of national stock-taking and towards the solution of many administrative problems.

Lands.—The Committee on Lands, recognizing that successful agriculture is the greatest factor in the prosperity and progress of Canada, and that soil fertility can be conserved only through the practice of scientific agriculture, has undertaken the task of studying and endeavouring to improve farming methods throughout the Dominion. Actual conditions were first investigated by a detailed agricultural survey of representative farming sections in the various provinces. On the whole, the information secured indicated that the introduction of proper farming methods would double the value of Canada's field crops in twenty years. Constructive measures, to supplement the survey work, were undertaken in 1912. In each district visited for survey purposes, illustration farms were conducted to demonstrate practically the benefits to be derived from scientific agriculture. Very gratifying results were secured, and the objects of the Commission in initiating it having been fully achieved, the work has been taken up and expanded under the federal Department of Agriculture. Educational work to improve Canadian agriculture has been persistently

ADMINISTRATION.

carried on. Reports and bulletins have been widely distributed, and an active propaganda for better farming has been conducted at numerous meetings of farmers' clubs, societies, etc., throughout Canada.

Forests.—The Committee on Forests has promoted, through both federal and provincial executive departments, a national forestry policy calculated to remedy past and avoid future errors with regard to Canada's forest wealth and production.

The initial problem has been to check the enormous annual waste from forest fires. The most serious waste—the severe loss caused by fires spreading from railway rights-of-way—has been very greatly reduced as a result of amendments to the Railway Act, proposed by the Committee, whereby the railways subject to the Act have been made liable for the property damage entailed by such fires. Further efforts are being made to effect a similar reduction in the loss from fires caused by government-owned and other railways not under the jurisdiction of the Board of Railway Commissioners, as well as by carelessness in the woods, particularly in connection with settlers' slash-burning operations. The Committee's recommendations have also resulted in important additions to the areas set aside as perpetual forest reserves, notably an area of approximately 17,900 square miles on the eastern slope of the Rocky mountains. The task of making an inventory of the forest resources of the Dominion is well under way, and valuable studies of the possibilities of reafforesting burnt over and logged areas, such as the Trent Watershed, have been made. The satisfactory solution of forestry problems of national importance—the further reduction of fire waste, the creation of adequate forest reserves, the proper classification of lands, the development of reafforestation enterprises and other questions—demand and are receiving attention.

Water Powers.—The Committee on Waters and Water Powers was first confronted with the necessity of securing the administration of water-powers as a public utility to conserve for the public the increment in value which will inevitably accrue to water-powers of large capacity and favourable situation. At its inaugural meeting in 1910, the Commission strongly urged that, in future, water-power rights should be alienated solely under conditional and limited leases, granted only after thorough investigation of the property involved and providing amply for development within a stated period, for public control of rates and for the payment of an adequate rental to be revised at regular intervals. Parliament subsequently enacted water-rights legislation embodying the principles set forth in the Commission's recommendations. Respecting the engineering, as distinct from the legal problems in conserving waters and water-powers, the primary undertaking has been the thorough study of the actual extent of Canada's water-power resources. The survey has progressed steadily, the results forming a series of comprehensive reports. The prevention of the pollution of streams to safeguard the purity of domestic water supplies, the preservation of forest growth on important watersheds and the solution of various difficulties arising in connection with international waters, especially with regard to the diversion of water for power, navigation and sanitary purposes, have engaged and will continue to require the Committee's study.

COMMISSION OF CONSERVATION.

Minerals.—The studies of the Committee on Minerals refer to possibilities of greater development of the mineral resources of Canada, as well as to the means of eliminating all available waste in actual mining operations. The heavy annual loss of life among mine-workers in Canada, which received the Committee's early consideration, is now showing a gratifying decrease. Measures have been taken, following a thorough study of coal-mining operations throughout the Dominion, to reduce the waste which has characterized this branch of industry in western Canada, and attention has been directed to the possibilities of utilizing the lignite coal of the prairie provinces and of building up a valuable industry based upon the utilization of by-product coke ovens. Action has also been secured with a view to checking the great loss resulting from the careless abandonment of natural gas wells. The recent discovery of phosphate in Rocky Mountains Park, by officials of the Commission, is of importance to the agricultural as well as to the mining industry. Should the deposits prove as extensive as indicated, they will form the basis of a fertilizer enterprise not only valuable to the predominant industry of western Canada but important also as a branch of mineral production.

Fisheries, Game and Fur-Bearing Animals.—The Committee has devoted its energies mainly to promoting more efficient exploitation of Canada's commercial fisheries. Strong representations have been made respecting the necessity for effective measures to revive the whitefish and oyster fisheries, to improve marketing methods and facilities and to secure greater development of the home market. With regard to wild life, the Committee has been largely instrumental in facilitating the conclusion of a migratory bird treaty with the United States—a measure of inestimable value in conserving both insectivorous and game birds. Further important service has been rendered the development, along sound, legitimate lines, of the fur-farming industry. The remarkable rise in fur prices during recent years ensures the commercial success of such an enterprise, properly conducted, and the climate of portions of the Dominion is admirably adapted for the industry.

Public Health and Town-Planning.—Of the many questions that have commanded the attention of the Committee on Public Health, in advancing human health and efficiency, the problems of safeguarding the purity of domestic water supplies and checking the growth of unsanitary housing conditions have been accorded special study. The prevention of the pollution of streams, whether under provincial, federal or international jurisdiction, has been thoroughly investigated. After a careful survey of housing conditions in Canada, a special Town-planning Branch of the Commission was created to promote the betterment of housing, town-planning and the general use and development of land throughout the Dominion. The keynote of town-planning as advocated by the branch is conservation of life and economy in the system of developing land. Through the efforts of this branch, town-planning legislation of an advanced character has been enacted in Nova Scotia and Manitoba, while similar Acts have been brought forward in Ontario, Quebec and Saskatchewan. To promote voluntary effort along these lines and to arouse a more effective public interest in civic affairs in general, the

ADMINISTRATION.

Civic Improvement League of Canada was recently organized. The Town-planning Branch has been of further service to many towns and cities in furnishing advice and assistance respecting proposed schemes for adequate control and guidance of future development. The branch also undertakes research work on problems relating to municipal government in general, and has been engaged in advocating the establishment of departments of municipal affairs in all provinces, with a view to securing a more uniform system and a higher standard of local government throughout Canada.

Publicity.—To acquaint the public with the objects and results of its endeavours, and to foster a widespread sentiment in support of proper administration of the national domain, the Commission has, through the Committee on Press and Co-operating Associations, issued numerous reports and bulletins. Frequent use has been made also of the public platform and valuable support and assistance received from the Press. Having become identified in public opinion with the promotion of national efficiency, the Commission is constantly in receipt of requests for assistance in eliminating all forms of waste and inefficiency. As the result of a very widespread appeal from public bodies throughout Canada, it recently undertook an exhaustive inquiry into the causes and means of reducing Canada's enormous annual fire loss,—a serious waste which imposes a heavy tax on industry and severe drain on our natural resources.

The success which has rewarded the Commission's efforts since its inception must be attributed largely to its non-executive character. Wisely limited to advisory functions, but practically unrestricted in its scope of inquiry with respect to efficient utilization of Canada's natural resources, the Commission of Conservation has proved admirably adapted to achieve the purpose for which it was designed.

PUBLIC LANDS.

Dominion Lands.—The Crown lands of the Dominion of Canada are situated in the Northwest provinces and in the Railway Belt of British Columbia. Of these lands large areas are offered in free grants as homesteads for settlers¹. The lands are laid out in townships of 36 sections. Each section contains 640 acres and is divided into quarter sections of 160 acres. A quarter section of 160 acres may be obtained by a settler on payment of an entry fee of \$10 and fulfilment of certain conditions of residence and cultivation. To qualify for the issue of the patent for his homestead a settler must have resided upon his homestead for at least six months in each of three years, must have erected a habitable house thereon, must have at least 30 acres of his holding broken of which 20 acres must be cropped, and must be a British subject.

Disposal of Dominion Lands in Manitoba, Saskatchewan and Alberta.—According to figures supplied by the Department of the

¹Copies of the detailed Regulations for the granting of free homesteads are obtainable from the Commissioner of Dominion Lands, Department of the Interior, Ottawa.

PUBLIC LANDS.

Interior, a total area of 138,780,827 acres, equal to 6,023 townships, or 216,845 square miles, has been alienated from the Crown. The total number of acres surveyed to January 1, 1916, was 198,937,027 and of this area there remain for disposal 60,156,200 acres, of which 4,015,300 are under timber licenses, 5,049,400 under grazing leases, 25,615,500 under forest reserves and parks and 25,476,000 now available for home-
stead entry.

In addition to the surveyed area, there are large tracts of land in the northern parts of these three provinces which have, as yet, been explored only in a very partial way. The total area of this unsurveyed tract is 236,705,671 acres, of which 22,760,212 acres are water-covered. No estimate of the area suitable for agriculture can be made with any degree of accuracy.

Railway Lands.—Table 5 is a record for the three fiscal years 1913 to 1915 of the sales of lands by the Hudson's Bay Company and by railway companies having government land grants. The total sales in 1914-15 amounted to \$3,279,031 for 192,801 acres, as compared with \$7,398,191 for 501,575 acres in 1913-14.

Homestead Entries.—In 1915, the total number of ordinary home-
stead entries for lands of the Dominion Government was 17,532, as com-
pared with 25,623 in 1914, 31,499 in 1913 and 35,538 in 1912. In 1915,
4,113 entries were made in Manitoba against 4,252 in 1914 and 2,998
in 1913; 6,349 in Saskatchewan against 9,752 in 1914 and 14,524 in
1913; 6,584 in Alberta against 10,722 in 1914 and 12,122 in 1913, and
486 in British Columbia against 847 in 1914 and 1,855 in 1913. The
number of pre-emptions under the Dominion Lands Act was 2,210 in
1915 (1,648 in Saskatchewan and 562 in Alberta) against 3,262 in 1914

ADMINISTRATION.

(2,417 in Saskatchewan and 845 in Alberta). The number of purchased homesteads under the Act was 285 in 1915 (197 in Saskatchewan and 88 in Alberta) against 422 in 1914 (290 in Saskatchewan and 132 in Alberta).

Provincial Public Lands.—In the Maritime provinces, in Quebec and in Ontario the public lands are administered by the provincial governments.¹ In Prince Edward Island all the land is settled. In Nova Scotia there are now no free grants of land; but under conditions prescribed by the Crown Lands Act of the Provincial Assembly (10 Edw. VII, 1910, c. 4, s. 26) and an amending Act of May 3, 1912, Crown lands, not exceeding in each case 150 acres, may be granted for agricultural or grazing purposes to applicants of not less than 18 years of age at the price of \$1 per acre, in addition to the expenses of survey. Leases and grants of Crown lands may also be obtained upon conditions prescribed. The total area of the Crown lands in Nova Scotia is 918,891 acres.

The area of the Crown lands in New Brunswick is about 7,250,000 acres. Probably not more than one-quarter of this area is suitable for agriculture. Under the provisions of Acts of the New Brunswick Legislative Assembly, lots of 100 acres each may be granted to settlers of 18 years of age and over, subject to conditions which include the clearance and cultivation of ten acres, the building of a house, three years' residence on the lot and payments or labour in aid of the construction of roads and bridges. The Government of New Brunswick have commenced a survey with a view to the separation of agricultural lands from those suitable only for timber and to the opening up of homestead lands through which roads will be built by the province.

In the province of Quebec the area of public lands subdivided and unsold on June 30, 1914, was 6,869,586 acres. During the year ended June 30, 1915, 286,621 acres were surveyed; 80,490 acres reverted to the Crown; 206,565 acres were sold for the sum of \$70,213; 350 acres were granted free for religious purposes and for colonization roads and 7,528 acres were granted free to the Orford Mountain Railway Company. Adding to the acreage available at June 30, 1914, the areas surveyed and the areas that reverted and deducting sales and grants, there remained subdivided and unsold on June 30, 1915, 7,022,254 acres. The average price of the areas sold was about 34 cents per acre. Agricultural lands in 100 acre lots are available for settlement upon prescribed conditions in Timiskaming (3,500,000 acres) at the price of about 30 cents per acre, in Abitibi (3,000,000 acres) at the price of about 30 cents per acre and in Beauce (50,000 to 60,000 acres) at the price of from 30 to 40 cents per acre.

In Ontario the public lands which are open for disposal are chiefly situated in the districts of Muskoka, Parry Sound, Nipissing, Sudbury,

¹For copies of the detailed regulations governing the disposal of provincial crown lands, application should be made as follows: Nova Scotia, to the Secretary for Industries and Immigration, Halifax; New Brunswick, to the Deputy Minister of Lands and Mines, Fredericton; Quebec, to the Deputy Minister of Lands and Forests, Quebec; Ontario, to the Deputy Minister of Lands, Forests and Mines, Toronto.

PUBLIC LANDS.

Algoma, Timiskaming, Thunder Bay, Kenora and Rainy River, and in the counties of Haliburton, Peterborough, Hastings, Frontenac, Lennox and Addington and Renfrew. In Northern Ontario, which comprises the territory lying north and west of the Ottawa and French rivers, the townships open for sale are subdivided into lots of 320 acres, or sections of 640 acres, and a half lot or quarter section of 160 acres is allowed to each applicant at the price of 50 cents per acre, payable one-fourth cash and the balance in three annual instalments with interest at 6 p.c. The applicant must be a male (or sole female), head of a family, or a single man over 18 years of age. The conditions of purchase include occupation by the purchaser within six months from date of purchase, the erection of a house, the clearance and cultivation of at least 10 p.c. of the area and three years' residence. Proxy regulations enable an individual to purchase a half lot of 160 acres and place an agent in residence, but the duties to be performed before issue of patent are double those required in ordinary purchases. Free grants and homesteads are available on lands within the districts of Algoma, Nipissing, Thunder Bay, Sudbury, Rainy River and Kenora, and between the Ottawa River and the Georgian Bay, comprising portions of the counties of Renfrew, Frontenac, Addington, Hastings, Peterborough and Haliburton and the districts of Muskoka and Parry Sound. Grants of 160 acres are made to either single or married men in free grant territories where the land is subdivided in sections of 320 acres. In the Huron and Ottawa territory an allowance for waste lands may increase the grant of a single man to an area not exceeding 200 acres, while heads of families may secure 200 acres free and purchase an additional 100 acres at 50 cents an acre. The settlement duties for free grants are as follows: (a) at least 15 acres to be cleared and brought under cultivation, of which 2 acres at least are to be cleared and cultivated annually during three years; (b) a habitable house to be built at least 16 x 20 feet in size; (c) actual and continuous residence upon and cultivation of the land for three years after location and thence to the issue of the patent. The mines and minerals and all timber other than pine, and in some cases the pine, are covered by the patent.

Ranching lands of prospective quality may be obtained on reasonable terms in waste and wooded areas, the valley of the Trent River lying between Lake Ontario and the Georgian Bay affording good opportunities for cattle and sheep raising.

Ontario includes over 230 million acres of land, of which only 13½ million acres are under cultivation. More than 20 million acres of the very finest arable land await the plough. Ontario is 3½ times as large as the British Isles and 1½ times as large as Texas. From east to west its borders are 1,000 miles apart, and from north to south 1,075 miles. Recent railway construction and colonization road building have made accessible vast tracts of untilled farm land and virgin forests in Northern Ontario.

In British Columbia there are large areas of free grant land. Any British subject being the head of a family, a widow, a femme sole who is over eighteen years of age and self-supporting, a woman deserted by her husband, a woman whose husband has not contributed to her

ADMINISTRATION.

support for two years, a bachelor over eighteen years, or any alien on his making a declaration of his intention to become a British subject, may pre-empt free 160 acres out of the unoccupied and unreserved Crown lands, not being an Indian settlement. The fees payable include \$2 for recording, \$2 for certificate of improvement and \$10 for the Crown grant. Of the total area of the province, approximately 200,000,000 acres are vacant, and 90,000,000 acres of vacant lands have been placed in reserve against sale, but open to settlement by pre-emption. It is the practice to continue surveys each year of the lands most favourable to settlement, and at the close of the year 1915 there were vacant and available 2,400,000 acres surveyed for settlers.

ADMINISTRATION.

DEPARTMENT OF THE SECRETARY OF STATE.

Charters of Incorporation.—The number of companies incorporated under The Companies Act during the fiscal year 1915-16 was 534, with a total capitalization of \$157,342,800, and the number of existing companies to which supplementary letters patent were issued was 71, of which 28 increased their capital stock by \$68,996,000 and 11 decreased their capital stock by \$4,811,700. The remaining 32 were granted supplementary letters patent for various objects, such as changing names, extending powers, etc., making a total of 605 charters and supplementary charters issued during the year; this is an increase of 59 as compared with the previous year. The total capitalization of new companies and the increased capital of existing companies amounted to \$221,527,100.

Canada Temperance Act.—The Act prohibits the sale of intoxicating liquors in the places that have adopted it, and is administered by the Department of the Secretary of State. According to the Report for the year ended March 31, 1915, of the Secretary of State, the Act was in force on April 1, 1915, in the following counties and cities:—Ontario: Counties of Peel and Huron and district of Manitoulin; Quebec: City of Thetford Mines; Nova Scotia: Counties of Annapolis, Digby, Guysborough, Queens, Shelburne and Yarmouth; New Brunswick: Counties of Albert, Carleton, Charlotte, Kings, Northumberland, Queens, Sunbury, Westmoreland and York, and City of Fredericton; Manitoba: Lisgar and Marquette.

Naturalizations.—The naturalizations effected under the Naturalization Act (R. S. 1906, c. 77), for the 12 months ended June 30, 1915, numbered 25,067. Of these 6,739 were formerly citizens of the United States. Table 8 shows by principal nationalities the number of naturalizations effected in Canada during the years 1907 to 1915 under the Act. The number of naturalizations for the years 1907 to 1915 was 207,757, which with 70,690 previously recorded makes a total of 278,447. (See also page 681.)

INDIAN AFFAIRS.

Department of Indian Affairs.—By section 5 of the British North America Act, 1867, the Indians of Canada and the lands reserved for them came under the control of the Dominion Government, and in 1873 an Act of the Canadian Parliament (R.S., c. 81) provided that the Minister of the Interior should be Superintendent General of Indian Affairs and as such have the control and management of the lands and property of the Indians in Canada. The aim of the Department of Indian Affairs is the advancement of the Indians in the arts of civilization, and Agents have been appointed to encourage the Indians under their charge to settle on the reserves and to engage in industrial pursuits.

Tables 9-18, compiled from the Reports of the Department, give for the years named particulars respecting population, religion, education, agriculture and financial status. Table 18 shows that during the year 1914 crops to the value of \$1,813,619 were raised by the Indians. Educational advantages are provided for the Indians in day, boarding and industrial schools, and for educational purposes appropriations were made by Parliament for the year 1916-17 amounting to \$734,115. Several bands of Indians assist, and during the fiscal year 1914-15 the sum of \$23,019 was available from this source. As shown in Table 12 the total number of Indian children enrolled as attending school during the fiscal year 1915 was 12,468, and the average attendance was 7,711.

The total parliamentary appropriation for the Indian Department for the year 1916-17 is \$1,760,360. On March 31, 1915, the Indians had to the credit of their trust funds \$7,738,146, derived from sales of lands and timber and from rentals of grazing and other lands. The amount named represents an increase of \$85,117 over that of the preceding year.

ADMINISTRATION.

PUBLIC WORKS.

Since Confederation and before, the Department of Public Works has been known as the constructing department. In 1879, the railways and canals were placed under control of a new department; the building and maintenance of penitentiaries were transferred to the Department of Justice, the maintenance and construction of lighthouses to the Marine and Fisheries Department and the smaller drill halls and armouries to the Department of Militia and Defence. The work of the Department of Public Works is now divided into three principal branches, viz., Engineering Branch, the Architect's Branch and the Telegraph Branch. The National Gallery of Canada is also administered by this Department. (See Year Book of 1914, p. 645.)

Engineering.—The Engineering Branch comprises the construction and repair of wharfs, piers, breakwaters, dams, weirs, bank and beach protection works; the improvement of harbours and rivers by dredging; the construction, maintenance and operation of government dredging plant; the construction and maintenance of graving docks; the construction, maintenance and working of slides and booms; the construction and maintenance of interprovincial bridges and approaches thereto, and of bridges on highways of federal importance in the Northwest Territories and the maintenance of military roads; also hydrographic and ordinary surveys and examinations, inclusive of precision levelling and geodetic measurements which are required for the preparation of plans, reports and estimates; the testing of cements, etc. The Branch has charge of about 1,500 harbour works, 3 graving docks, 4 slide and boom works, interprovincial bridges, 49 dredges and 65 tugs and other dredging plant.

Architecture.—The Architect's Branch builds and maintains all government buildings, post offices, custom houses, examining warehouses, and constructs quarantine, immigration and experimental farm buildings, armouries and drill halls, land offices and telegraph offices.

Telegraphs.—The Telegraph Branch has control over the construction, repair and maintenance of all government-owned telegraph lines and cables. These lines are located in the provinces of Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan, Alberta, British Columbia and the Yukon, and statistics relating to them are given on page 510.

Graving Docks.—There are three graving or dry docks completed and owned by the Canadian Government, and a fourth is under contract. The dimensions of these three docks are shown in Table 19. The dock at Kingston, Ontario, is under lease to the Kingston Shipbuilding Company. The dock under contract is to be at Levis, Quebec, east of the old dock, and is to be 1,150 feet long, divided into two parts (650 and 500 feet respectively), and 120 feet wide; it is to have a depth at high water of 40 feet. It will probably cost about \$2,750,000. Under the Dry Dock Subsidies Act, 1910 (9-10 Edw. VII, c. 17)¹ several docks have been subsidized by payments of 3 or 3½ p.c. per annum for a given number of years on the original cost, as shown by Table 20.

¹For description of this Act, see Canada Year Book, 1910, p. xxviii.

Expenditure and Revenue.—Table 21 shows the expenditure and revenue for the fiscal years 1911-15 of the Public Works Department of the Dominion Government. For the year 1914-15, the expenditure was \$29,283,317, as compared with \$27,991,337 in 1913-14, a net increase of \$1,291,980. In the Report of the Department for the year 1914-15 it is stated that while the outlay in connection with dredging and public buildings has been nearly \$2,000,000 less, that on harbour and river works has been nearly \$3,000,000 more. The explanation of this is the large terminal works under contract in the various national harbours, the majority of which were well under way during the year and earning heavily. The revenue for the year shows a decrease of \$56,021, chiefly accounted for by a decrease in graving dock and telegraph returns. The decrease in graving dock returns is more a cause of congratulation than regret, as it indicates fewer accidents to shipping in Canadian waters.

PUBLIC HEALTH AND QUARANTINE.

The Public Health Service of the Dominion, considered chiefly in connection with the relations of Canada with other countries, is under the charge of a Director General of Public Health, whose office is a branch of the Department of Agriculture. The report for the year 1914-15 of the Director General of Public Health, printed as an Appendix to the Report of the Minister of Agriculture, describes the prevalence in foreign countries of endemic diseases, including Asiatic cholera, bubonic plague, smallpox, leprosy, beri-beri, enteric fever and tuberculosis, and of the inspection work of the quarantine stations at Canadian ports of entry. During the year 1914-15, 1,458 vessels and 349,190 persons were inspected at 12 quarantine stations, and there were 542 admissions into hospitals. The corresponding figures for 1913-14 were 1,464 vessels and 706,682 persons inspected and 1,963 admissions to hospitals.

PUBLIC DEFENCE.

Military Forces.—Before the outbreak of the war, the Canadian Militia consisted of a Permanent Force, which on March 31, 1914, numbered 3,000 officers, non-commissioned officers and men, and an Active Militia, which at the same date numbered 5,615 officers and 68,991 non-commissioned officers and men. Since the outbreak of the war on August 4, 1914, successive contingents of troops of all arms have

PUBLIC DEFENCE.

been recruited, equipped, trained and despatched by the Canadian Government to Great Britain for active service as part of the Imperial forces. Up to September 1, 1916, there had been sent overseas for active service in the war, 210,394 officers, non-commissioned officers and men. At the same date there were training in Canada, in camps in the various military districts, 4,577 officers and 107,998 other ranks, a total of 112,575. In addition, there have been maintained on guard duty in Canada (canals, certain railway bridges and public buildings) about 12,500 of all ranks.

Table 22, showing the Militia Expenditure and Revenue for the five fiscal years, 1911 to 1915, is taken from the Report for the year ended March 31, 1915, of the Militia Council. Table 23 shows the expenditure on the war appropriation for the year ended March 31, 1915: (A) by the Department of Militia and Defence and (B) by other Departments of the Dominion Government. The total amounts to \$60,750,476, of which the sum of \$53,176,614 was expended by the Department of Militia and Defence, and \$7,573,862 by other Departments. Table 24 shows the scale of annual pensions granted to dependents of deceased soldiers and Table 25 the scale of annual pensions to soldiers wounded or disabled on active service. The total amount of the European war pensions paid by the Canadian Department of Militia and Defence from May, 1915, to March 31, 1916, is \$304,997.

NOTE.—In the above scale total disability (class 1) is reckoned as 100, and the remaining classes of disability receive percentages of the amounts granted for total disability, as shown. For disability reckoned as under 20 p.c., a gratuity not exceeding \$100 may be granted.

Naval Service.—The Naval Service of Canada was established by the Naval Service Act, 1910 (9-10 Edw. VII, c. 43), the main provisions of which were described in the Year Book of 1910, pp. xxvi-xxix. The Department of the Naval Service, then created, now consists of eight branches:—(1) Naval, (2) Fisheries, (3) Fisheries Protection, (4) Tidal and Current Survey, (5) Hydrographic Survey, (6) Radio-telegraphy, (7) Patrol of Northern Waters and (8) Life Saving Service. The total financial appropriation of the Department for the year 1915-16 was \$4,176,500, of which the sum of \$2,463,333 was expended. The appropriation for the Naval Branch was \$1,000,000, of which the sum of \$401,722 was expended. In addition to the foregoing, the sum of \$3,274,020 was also expended out of the war appropriation.

Royal Naval College.—The officers of the Royal Naval College continue to report most favourably on the cadets in attendance, both as to their mental and physical progress during the past year. The midshipmen who have been serving in ships of the Royal Navy and the Royal Canadian Navy have also been favourably reported upon, and have proved themselves capable and efficient. Fourteen midshipmen who entered the College in January, 1911, were promoted to the rank of acting sub-lieutenant on September 1, 1915. Two of these officers are now serving in the British Submarine Service, and four lieutenants and five engineer-lieutenants are serving in vessels of the Grand Fleet. Six cadets entered the College after the regular examinations held in May, 1915. The course of the Royal Naval College at Halifax corresponds to that of the Royal Military College at Kingston, except that

ADMINISTRATION.

it is on a naval basis. Graduates of the College may either adopt a seafaring career or take up positions in the Canadian Government in the Hydrographic or Tidal and Current Surveys. Arrangements have also been made with the Universities of McGill and Toronto for the entry of graduates of the Royal Naval College in the second year of the course of applied science. The Admiralty and the Naval Service Department have reached an agreement whereby eight graduates of the Royal Naval College may be entered yearly in the Royal Navy. The same rules that govern other officers of the Royal Navy apply to these cadets. The next examination for cadets will be held in May, 1917. Successful cadets will enter the College about August 1, 1917.

Northwest Mounted Police.—The Royal Northwest Mounted Police are distributed in New Manitoba, Saskatchewan, Alberta, the Northwest Territories and the Yukon Territory, with headquarters at Regina, Saskatchewan, and the operations of the force for the year ended September 30, 1915, are described in the Commissioner's Report dated November 1, 1915. On September 30, 1915, the strength of the force was 60 officers, 869 non-commissioned officers and constables and 987 horses, an increase of 5 officers and 152 horses, and a decrease of 344 non-commissioned officers and constables, as compared with the previous year. The decrease in strength is due to the fact that shortly after the outbreak of the war authority was granted to increase the force by 500 men for one year, and that nearly all the men so engaged took their discharges for the purpose of joining the Army for service at the front.

CRIMINAL STATISTICS AND PENITENTIARIES.

The criminal statistics of Canada are collected, compiled and published annually by the Census and Statistics Office under statutory authority of the Census and Statistics Act, 1905 (4-5 Edw. VII, c. 5). They relate to the year ended September 30, and the last issued annual report is for 1914. The statistics are divided into the two classes of (1) indictable offences and (2) summary convictions, the former comprising all cases tried by police or other magistrates and the latter all cases of minor importance disposed of by justices of the peace under the Summary Convictions Act.

Indictable Offences.—Table 27 shows by provinces in respect of indictable offences the number of charges and convictions and the percentage of acquittals for the years 1913 and 1914. There were 28,007 charges and 21,438 convictions for indictable offences throughout Canada during the year ended September 30, 1914, as compared with 24,078 charges and 18,320 convictions in 1913, or an increase of 16.32 p.c. for the former and 17.02 p.c. for the latter during the year. As shown by the table, the convictions increased in every province except Manitoba, which shows a decrease of 5.56 p.c. in the number of convictions for 1914.

Summary Convictions.—The number of summary convictions in 1914 was 161,597, as compared with 154,818 in 1913. This represents an increase of 6,779, or 4.37 p.c.

Death Sentences.—During 1914, 27 persons were sentenced to death for murder, as compared with 23 in 1913. Death sentences in 1914 were carried out in 11 cases compared with 8 in 1913, and were commuted to life imprisonment in 16 cases in 1914 compared with 13 in 1913. Eight persons were sentenced in 1914 to be imprisoned for life, as compared with three persons in 1913.

ADMINISTRATION.

Penitentiaries.—The statistics of penitentiaries are compiled from the annual reports to the Minister of Justice of the Inspectors of Penitentiaries. The report for the fiscal year 1914-15, in reference to the parole system, states that the total number of paroles granted during a sixteen years' operation is 7,776. A total of 6,412 men have completed their probation on parole and occupy positions in good citizenship to-day, and 875 prisoners are now reporting and have in prospect the completion of their probation on parole. The total delinquency for non-compliance with conditions of license is 265, or 3.4 p.c., and for subsequent conviction 224, or 2.9 p.c., making a total delinquency of 6.3 p.c.

NOTES.—In Prince Edward Island only one divorce has been granted from 1868 to 1915; the divorce was granted in 1913. In British Columbia, in addition to the divorce, 13 judicial separations have been granted: one in 1892, one in 1893, one in 1899, two in 1900, two in 1903, three in 1913, three in 1914; "Decree Nisi" has been granted in 20 cases: four in 1900, two in 1909, six in 1912, five in 1913 and three in 1914.

¹Includes one judicial separation. ²Includes one not effective till court costs are paid.

LIST OF DOMINION ACTS OF PARLIAMENT.

List of the Principal Acts of Parliament administered by Departments of the Government of the Dominion of Canada, as compiled from information supplied by the respective Departments.

Numbers within brackets denote the chapter of the Revised Statutes of Canada, 1906 (R. S. C. 1906).

Justice.—Department of Justice (21); Solicitor General's (22); Northwest Territories (62); Yukon (63); Dominion Police (92); Judges (138); Supreme Court (139); Exchequer Court (140); Admiralty (141); Petition of Right (142); Criminal Code (146); Penitentiary (147); Prisons and Reformatories (148); Identification of Criminals (149); Ticket of Leave (150); Fugitive Offenders' (154); Extradition (155); Juvenile Delinquents (7-8 Edw. VII, c. 40, 1908).

External Affairs.—The functions and duties of this Department are defined by the Department of External Affairs Act, 1912 (2 Geo. V, c. 22) and by the International Boundary Waters Treaty Act (1-2 Geo. V, 1911, c. 28), as amended by the statute of April 3, 1914 (4 Geo. V, c. 5).

Customs.—Customs Tariff; Customs; Canada Shipping (in part); Infectious and Contagious Diseases affecting Animals (in part); Destructive Insect and Pest (in part); Export; Copyright (in part); Petroleum and Naphtha Inspection (in part).

Post Office.—Post Office; Government Annuities; Pacific Cable; Parcel Post; Special War Revenue, 1915.

Agriculture.—Experimental Farm Stations; Inspection and Sale, Part IX (Fruit and Fruit Marks); Dairy Industry; Cold Storage; Cold Storage Warehouse; Milk Test; Seed Control; Live Stock Pedigree; Animal Contagious Diseases; Meat and Canned Foods; Destructive Insect and Pest; Agricultural Instruction; Quarantine; Leprosy; Public Works (Health); Patent; Trade Mark and Design; Timber Marking; Copyright.

Interior.—Department of the Interior; Immigration; Dominion Lands; Dominion Lands Surveys; Forest Reserves and Parks; Irrigation; Railway Belt; Railway Belt Water; Yukon; Yukon Placer Mining.

Finance.—Department of Finance and Treasury Board; Appropriation; Civil Service; Superannuation and Retirement; Contingencies; Consolidated Revenue and Audit; Currency; Ottawa Mint; Dominion Notes; Provincial Subsidies; Bank; Savings Bank; Penny Bank; Quebec Savings Banks; Loan Companies; Trust Companies; Bills of Exchange; Interest; The Special War Revenue Act, 1915 (in part); The Business Profits War Tax Act, 1916.

Insurance.—Insurance; Civil Service Insurance.

Militia and Defence.—Militia and Defence of Canada; Royal Military College; Militia Pension; An Act to enable Canadian Soldiers on active military service during the present war to exercise their electoral franchise.

Public Works of Canada.—Public Works (39); Government Harbours and Piers, s. 5 (112); Navigable Waters Protection, s. 7 (115); Telegraph Secrecy (126); Dry Dock Subsidies (9-10 Edw. VII, 1910, c. 17); An Act to amend the Navigable Waters Protection Act (9-10 Ed. VII, 1910, c. 44); An Act to authorize the payment of a subsidy to the Collingwood Shipbuilding Co., Ltd. (2 Geo. V, 1912, c. 17); An Act to Amend the Dry Dock Subsidies Act, 1910 (2 Geo. V, 1912, c. 20); An Act to amend the Government Works Toll Act, R.S.C. 1906, c. 40 (2 Geo. V, 1912, c. 26); An Act to incorporate the National Gallery of Canada (3-4 Geo. V, 1913, c. 33); An Act to authorize the payment of a subsidy to the Western Dry Dock and Shipbuilding Co., Ltd. (3-4 Geo. V, 1913, c. 57); An Act to amend the Dry Dock Subsidies Act, 1910 (4-5 Geo. V, 1914, c. 29).

Trade and Commerce.—Canada Grain; Inspection and Sale; Culling and Measuring of Timber in the provinces of Ontario and Quebec; Manufacture of Binder Twine in Canada; Petroleum Bounty, 1909; Bounties on Lead contained in lead-bearing ores mined in Canada; Gold and Silver Marking; Census and Statistics; Bounties on Zinc.

Labour.—Conciliation and Labour (96); Industrial Disputes Investigation (6-7 Edw. VII, 1907, c. 20); Combines Investigation (9-10 Edw. VII, 1910, c. 2); Fair Wages Resolution of the House of Commons; White Phosphorus Matches (4-5 Geo. V, 1914, c. 12).

Secretary of State.—Companies; Naturalization; Canada Temperance; Civil Service; Board of Trade; Trade Unions.

ADMINISTRATION.

Naval Service.—Naval Service (9-10 Edw. VII, 1910, c. 43); Radiotelegraph (3-4 Geo. V, 1913, c. 43) and Regulations issued thereunder; Fisheries (4-5 Geo. V, 1914, c. 8) and Regulations issued thereunder; Fish Inspection (4-5 Geo. V, 1914, c. 45).

Railways and Canals.—Department of Railways and Canals (35); Government Railways (36); Intercolonial and P.E.I. Railway Employees' Provident Fund (6-7 Edw. VII, c. 22); The Government Railways Small Claims (9-10 Edw. VII, c. 26). The Railway Act (Companies) (37) and its amendments confer certain powers upon the Minister of the Department. In the case of subsidized railways the authorizing Acts are carried out under the Department, which has also certain jurisdiction with respect to the Grand Trunk Pacific and the Canadian Northern Railway Acts, where Government guarantee has been given, and with respect to the Transcontinental Railway.

Marine.—Department of Marine and Fisheries; Government Vessels Discipline; Government Harbours and Piers; Canada Shipping; Navigable Waters Protection; Quebec Harbour and River Police; Live Stock Shipping.

Indian Affairs.—The Indian Act, 1906, with amendments to date.

King's Printer and Controller of Stationery.—Public Printing and Stationery (80).

Inland Revenue.—Inland Revenue; and the Acts respecting the adulteration of food and other articles; Weights and Measures; Inspection of Electricity and Inspection of Gas and Gas Meters; Public Ferries; Proprietary or Patent Medicines; Agricultural Fertilizers; Commercial Feeding Stuffs; Petroleum and Naphtha; Special War Revenue, 1915.

Mines.—Mines and Geological Survey Department (6-7 Edw. VII, 1907, c. 29).

Commission of Conservation.—Conservation Act (8-9, Edw. VII, c. 27, 1909) and amending Acts (9-10, Edw. VII, c. 42, 1910; 3-4, Geo. V, c. 12, 1913).

List of Principal Publications of Departments of the Government of the Dominion of Canada, as compiled from information supplied by the respective Departments.

Customs.—Annual Report containing Tables of Imports, Exports and Navigation. Monthly Statements of Imports entered for Consumption and Exports of the Dominion.

Post Office.—Annual Report of the Postmaster General. Official Postal Guide. Regulations as to parcel post, rural mail delivery and government annuities.

Agriculture.—The Agricultural Gazette of Canada, Subscription, \$1 per year (monthly). Annual Reports of the Minister, of the Experimental Farms and Stations, of the Dairy and Cold Storage Commissioner, of the Veterinary Director General and of the Entomological Branch. Bulletins, pamphlets, circulars and Seasonable Hints of the Experimental Farms Branch on a great variety of agricultural subjects, including publications of the following ten divisions: Field Husbandry; Animal Husbandry; Horticulture; Cereal; Chemistry; Forage Plants; Botany; Poultry and Tobacco. Guide to the Experimental Farms and Stations. Bulletins of the Dairy and Cold Storage Branch relating to the history of the dairying and cold storage industry in Canada; the making of butter and cheese, cow-testing, dairying experiments; co-operation, etc. Report of the Canadian Record of Performance; sheep and swine; beef raising; horse breeding; poultry and the marketing of eggs. Bulletins of the Health of Animals Branch, with regulations as to contagious abortion; rabies; sheep scab; actinomycosis; anthrax; glanders; hog cholera; maladie du coit; tuberculosis; quarantine; meat inspection and foot-and-mouth disease. Bulletins and Reports of the Seed Branch as to seed-testing; the production and use of seed grains and the Seed Control Act. Bulletins and Circulars of the Entomological Branch and instructions to importers of nursery stock. Reports of the Canadian Seed Growers' Association. Fodder and Pasture Plants, by George H. Clark, B.S.A., and M. Oscar Malte, Ph.D., 143 pages, 27 plates, price 50 cents. Bulletin on the Maple Sugar Industry; Agricultural War-Book; Agricultural Instruction Act. Bulletin of Foreign Agricultural Intelligence containing reports of the International Agricultural Institute.

NOTE.—The foregoing is a selection from the publications of the Department. A complete list of publications available for distribution is issued, and so long as the supply lasts copies of publications will be sent free on application to the Publications Branch, Department of Agriculture, Ottawa.

DOMINION GOVERNMENT PUBLICATIONS.

Interior.—Annual Report with reports from the following branches: Immigration; Topographical Surveys; Astronomical Observatory; Dominion Parks; Forestry; Irrigation; Dominion Water Power; Railway Lands; British Columbia Lands; Mining Lands and Yukon; Chief Geographer. Hand Book for the Information of Intending Settlers. Pamphlets, Reports, Bulletins, etc., of the respective Branches of which the following is a selection. *Immigration Branch*: Canada West (English, French, Danish, Norwegian, Swedish); Atlas of Canada (English); Country Called Canada (English); What Irishmen say of Canada; Canada as Seen Through Scottish Eyes; Canada—The Land of Opportunity (English); Where Should You Go? Settling on Canada's Free Land; Classes Canada Calls For; Homestead Regulations; Woman's Work in Canada; Prince Edward Island; Nova Scotia Pamphlet; New Brunswick Pamphlet; Eastern Quebec—Région de Lac St. Jean, etc. (French and English); Western Quebec—Timiskaming, etc. (French and English); Eastern Townships of Quebec; Ontario—Canada's Farthest South; Ontario—Improved Ontario Farms; Ontario—The Heart of Canada; Ontario—Thunder Bay; Kenora and Rainy River Districts of New Ontario; Rivière de la Paix; Prairie Provinces in 1912; British Columbia—Canada's Western Heritage; Canadian Winter; Law and Regulations respecting Immigration and Immigrants; Immigration Facts and Figures. *Topographical Surveys*: (1) Annual Report of the Topographical Surveys Branch, and accompanying maps; (2) Manual of Instruction for the Survey of Dominion Lands. Price 50c. (3) Rules and Regulations of the Board of Examiners for Dominion Land Surveyors, and programme of the subjects of the various examinations. (4) The Selkirk Range (in two volumes), by A. O. WHEELER, F.R.G.S. Price \$1. (5) Copying Camera of the Surveyor General's Office. (6) Photographic Methods Employed by the Canadian Topographical Survey, by A. O. WHEELER, F.R.G.S. (7) Precise Measuring with Invar Wires and the Measurement of the Kootenay Base, by P. A. CARSON, D.L.S. (8) Papers on Descriptions for Deeds. (9) Description of the townships surveyed in the different Provinces, yearly, since 1909. (10) Description of the surveyed townships in the Peace River District, in the Provinces of Alberta and British Columbia. (11) Descriptions of lands comprised within the Fort Pitt Sectional Map, consisting of townships 49 to 56, ranges 15 to 28, west of the third meridian. (Copies of the publications of the Topographical Surveys Branch may be obtained on application to the Secretary of the Department of the Interior for Nos. 1 and 4; to the Surveyor General for Nos. 2-5-11, and to the Secretary, Board of Examiners for Dominion Land Surveyors for No. 3.) Description of Surveyed Lands in the Railway Belt of British Columbia (in three parts). Extracts from Reports on townships east of the principal meridian received from surveyors to July 1st, 1914. Extracts from Reports on townships 1 to 16 west of the principal meridian received from surveyors to July 1st, 1914. Extracts from Reports on townships 17 to 32 west of the principal meridian received from surveyors to July 1st, 1914. Report on Triangulation of Railway Belt of British Columbia by H. PERRY, B. Eng., D.L.S. Report on Levelling Operations with a Summary of the Results, by J. N. WALLACE, D.L.S. *Dominion Astronomical Observatory*: Annual Reports of Chief Astronomer for years 1904 to 1911, Publications of Dominion Observatory, Vol. 1—No. 1, Stereographic Projection Tables by OTTO KLOTZ, LL.D., F.R.A.S.; No. 2, Precise Levels, by D. H. NELLES, D.L.S.; No. 3, Precise Levelling, by F. B. REID, D.L.S.; No. 4, Orbit of δ Tauri, by W. E. HARPER, M.A.; No. 5, Earthquake of April 28, 1913, by OTTO KLOTZ, LL.D., F.R.A.S.; No. 6, Spectrum of Nova Geminorum, by J. S. PLASKETT, B.A., F.R.S.C.; No. 7, Experiments regarding Efficiency of Spectrographs, by J. S. PLASKETT, B.A., D.Sc., F.R.S.C.; No. 8, Precise Levelling, by F. B. REID, D.L.S.; No. 9, Orbit of σ Geminorum, by W. E. HARPER, M.A.; No. 10, Orbit of δ Persei, by J. B. CANNON, M.A.; No. 11, Orbits of the Spectroscopic Components of δ Boötis, by W. E. HARPER, M.A.; No. 12, Radial Velocity of ρ Leonis, by W. E. HARPER, M.A.; No. 13, Orbit of ξ Persei from the H and K Lines, by J. B. CANNON, M.A.; No. 14, Orbit of β Coronæ Borealis, by J. B. CANNON, M.A.; No. 15, Measures of γ Aquarii, by J. B. CANNON, M.A.; No. 16, Measures of σ Leonis, by J. B. CANNON, M.A. Vol. 2—No. 1, Precise Levelling, by F. B. REID, D.L.S.; No. 2, Spectroscopic Binary θ^2 Tauri, by J. S. PLASKETT, B.A., D.Sc., F.R.S.C.; No. 3, Orbit of ω Cassiopeiæ, by R. K. YOUNG, Ph.D.; No. 4, Orbit of 136 Tauri, by J. B. CANNON, M.A.; No. 5, Orbits of the Spectroscopic Components of 50 Draconis, by W. E. HARPER, M.A.; No. 6, Orbit of ζ Andromedæ, by J. B. CANNON, M.A.; No. 7, A Meteor Star Atlas, by R. K.

ADMINISTRATION.

YOUNG, Ph.D.; No. 8, Orbit of the Spectroscopic Binary 1149, Groombridge, by W. E. HARPER, M.A.; No. 9, Orbit of the Spectroscopic Binary 23, Cassiopeia, by R. K. YOUNG, Ph.D.; No. 10, Gravity, by F. A. McDiarmid, B.A.; No. 11, Tests made to Ascertain where Conditions were Most Suitable for the 72-inch Reflector, by W. E. HARPER, M.A.; No. 12, Mean Distance of Stars whose Radial Velocities, Proper Motion and Parallaxes have been Determined, by R. K. YOUNG, Ph.D.; No. 13, Orbit of B.A.C. 5890, by T. H. PARKER, M.A.; No. 14, Orbit of μ Persei, by J. B. CANNON, M.A.; No. 15, Orbit of Boss 3323, by J. B. CANNON, M.A. Vol. 3—No. 1, Earthquake of Feb. 10, 1914, by OTTO KLOTZ, LL.D., Ph.D., F.R.A.S.; No. 2, Seismological Tables, by OTTO KLOTZ, LL.D., Ph.D., F.R.A.S.; No. 3, The Spectroscopic Orbits of 12 Lacertæ, by R. K. YOUNG, Ph.D.; No. 4, Orbit of the Spectroscopic Binary A Boötis, by R. K. YOUNG, Ph.D.; No. 5, Orbit of the Spectroscopic Binary α Trianguli, by W. E. HARPER, M.A.

Dominion Parks.—A Sprig of Mountain Heather; Glaciers of the Rockies; Classified Guide to Fish and their Habitat in the Rocky Mountains Park; The Nakimu Caves; Guide to the Geology of the Canadian National Park on the C.P.R. between Calgary and Revelstoke. (1) Handbook to the Rocky Mountains Park Museum; Hints to Householdors re Fire Protection.

Forestry.—Annual Reports of the Director of Forestry, 1905 to 1908, inclusive, and 1913 and 1914. Bulletins (where number and title are omitted, the document is out of print): (1) Tree Planting on the Prairie; (8) Forest Products of Canada, 1908; (10) The Farmer's Plantation; Forest Products of Canada, 1909; (11) Lumber, Square Timber, Lath and Shingles; (12) Pulpwood; (14) Cross-ties purchased; (15) Forest Products of Canada, 1909 (being Nos. 11, 12, 13, 14, 19 and 20), French edition only; (16) Forest Fires and Railways; Forests Products of Canada, 1910; (22) Cross-ties; (23) Timber used in Mining Operations; (24) Wood-using Industries of Canada, 1910; Agricultural Implements and Vehicles, Furniture and Cars and Veneer; (27) Forest Products of Canada, 1910; Cooperage; (29) Timber Conditions in the Lesser Slave Lake Regions; (32) The Turtle Mountain Forest Reserve; (33) Forest Conditions in the Rocky Mountains Forest Reserve; Forest Products of Canada, 1911; (34) Lumber, Square Timber, Lath and Shingles; (35) Poles and Cross-ties; (36) Wood-using Industries of Ontario; (37) Forest Products of Canada, 1911 (being Nos. 30, 31, 34 and 35); Forest Products of Canada, 1912; (38) Pulpwood; (39) Poles and Ties; (40) Lumber, Square Timber, Lath and Shingles; (42) Co-operative Forest Fire Protection; (43) Forest Products of Canada, 1912 (being Nos. 38, 39 and 40); (44) Wood-using Industries of the Maritime Provinces; (45) Timber and Soil Conditions in Southeastern Manitoba; Forest Products of Canada, 1913; (46) Pulpwood Consumption; (47) Poles and Cross-ties; (48) Lumber, Lath and Shingles; (49) Treated Wood-block Paving; (50) Wood-using Industries of the Prairie Provinces; (51) Game Preservation in the Rocky Mountains Forest Reserve; (52) Forest Products of Canada, 1913 (being Nos. 46, 47 and 48); (53) Timber Conditions in the Smoky River Valley and Grande Prairie Country; Forest Products of Canada, 1914; (54) Pulpwood; (55) Poles and Cross-ties; (56) Lumber, Lath and Shingles; (57) Forest Products of Canada, 1914 (being Nos. 54, 55 and 56). Circulars: (5) Planning and Tree Plantation for a Prairie Homestead; (6) Preservative Treatment of Fence Posts; (7) Manitoba, a Forest Province; (8) The Forest Products Laboratories; (9) Chemical Methods for Utilizing Wood Wastes; (10) The Care of the Woodlot; (11) The Relation of Forestry to the Development of the Country.

Irrigation.—Annual Reports 1912 to 1915; Reports of Stream Measurements, 1909 to 1914; Reports: Western Canada Irrigation Association, 1908 to 1915; Bulletins: (1) Irrigation in Saskatchewan and Alberta; (2) Alfalfa Culture; (3) Climatic and Soil Conditions in C.P. Ry. Co.'s Irrigation Block; (4) Duty of Water Experiments and Farm Demonstration Work. *Dominion Water Powers:* Annual Reports for 1912-13 and 1913-14. The Annual Reports of the Branch previous to 1913 are included in the Annual Report of the Department. Water Resources Papers: (1) Report of the Railway Belt Hydrographic Survey for 1911-12, by P. A. CARSON; (2) Report of Bow River Power and Storage Investigations, by M. C. HENDRY; (3) Report on Power and Storage Investigations, Winnipeg River, by J. T. JOHNSTON;

DOMINION GOVERNMENT PUBLICATIONS.

(4) Report of the Manitoba Hydrographic Survey to the year ending 1914, by M. C. HENDRY; (5) Preliminary Report on the Pasquia Reclamation Project, by T. H. DUNN; (6) Report on Cost of Various Sources of Power for Pumping in Connection with the South Saskatchewan Water Supply Diversion Project, by H. E. M. KENSIT; (7) Report on the Manitoba Water Powers, by D. L. McLEAN, S. S. SCOVIL and J. T. JOHNSTON; (8) Report of the British Columbia Hydrographic Survey, for 1913, by R. G. SWAN; (9) Report of Red River Navigation Surveys, by S. S. SCOVIL; (10) General Guide for Compilation of Water Power Reports of Dominion Water Power Branch, prepared by J. T. JOHNSTON; (11) Final Report on the Pasquia Reclamation Project by T. H. DUNN; (12) Report on Small Water Powers in Western Canada and Discussion of Sources of Power for the Farm, by A. M. BEALE; (13) Report on the Coquitlam-Buntzen Hydro-Electric Development, by G. R. G. CONWAY; (14) Report of the British Columbia Hydrographic Survey for 1914, by R. G. SWAN; (15) Report of the Water Powers of Alberta and Saskatchewan, by C. H. ATTWOOD; (16) Report of the Water Powers of Canada. A series of five pamphlets prepared for distribution at the Panama-Pacific Exposition, 1915, by G. R. G. CONWAY, P. H. MITCHELL, H. G. ACRES, F. T. KÄELIN and K. H. SMITH; (17) Canadian Hydraulic Power Development and Electric Power in Canadian Industry, by C. H. MITCHELL; (18) Report of the British Columbia Hydrographic Survey for 1915, by R. G. SWAN. (19) Report of the Manitoba Hydrographic Survey for 1915, by M. C. HENDRY. *Railway Lands: The Unexploited West; Peace River Country; Preparing Land for Grain Crops; Athabaska Country. Mining Lands and Yukon: The Yukon Territory: Its History and Resources. Chief Geographer: Statistics of the Dominion of Canada.*

Finance.—Annual Reports on the Public Accounts of the Dominion of Canada. Loan and Trust Companies. Monthly Statement of the Chartered Banks of Canada. Unclaimed Balances in the Chartered Banks. List of Shareholders in Chartered Banks.

Insurance.—Quarterly Statement of List of Licensed Companies. Annual Abstract of Statements of Insurance Companies in Canada (subject to correction). Annual Reports of the Insurance Department, Vol. I (Fire and Miscellaneous), Vol. II (Life Companies). Annual List of Securities held by Insurance Companies in Canada with Department's Valuation thereof.

Militia and Defence.—Annual Report. Quarterly Militia List. Militia Daily Orders. Militia General Orders.

Trade and Commerce.—Annual Report: Part I, Imports into and Exports from Canada (itemized and general statements); Part II, Canadian Trade with (1) France, (2) Germany, (3) United Kingdom, (4) United States; Part III, Canadian Trade with British and Foreign Countries, except France, Germany, United Kingdom and United States; Part IV, Miscellaneous Information (Bounties; Lumber and Staple Products; Revenue and Expenditure of the Department; Statistical Record of the Progress of Canada; Tonnage; Tables; Trade Commissioner Service); Part V, Grain Statistics; Part VI, Subsidized Steamship Services; Part VII, Trade of British and Foreign Countries; Monthly Reports of Trade Statistics; Weekly Bulletin circulated within Canada only, containing Reports of Trade Commissioners and general trade information. Miscellaneous publications during 1914: Directory of Foreign Importers, Directory of Canadian Exporters, "The German War and Its Relation to Canadian Trade," List of Licensed Elevators, Grain Inspection in Canada, Canada and the British West Indies, Canada the Country of the Twentieth Century. Publications of the Census and Statistics Office: Canada Year Book. Report on the Census of 1911, Vol. I (Areas and Population); Vol. II (Religions, Origins, etc.); Vol. III (Manufactures); Vol. IV (Agriculture); Vol. V (Forest, Fishery, Fur and Mineral Production); Vol. VI (Occupations). Special Report on the Foreign-born Population. Census and Statistics Monthly. Criminal Statistics.

Labour.—Monthly: The Labour Gazette (published at the nominal subscription price of 20 cents per annum, averaging 130 or 140 pages). Annually: Report of Department of Labour. Report of Proceedings under the Industrial Disputes Investigations Act, 1907. Report of Proceedings under the Combines Investigation Act. Wholesale Prices in Canada, 1915 (a report is published for each year about

ADMINISTRATION.

May or June). Labour Organization in Canada, 1915 (a report is published for each year about May or June). Special Reports: Strikes and Lockouts in Canada, 1901-1912 (published in October, 1913). Report of Royal Commission on Industrial Training and Technical Education (Four volumes). Special Bulletins, etc.

Secretary of State.—Annual Report. Civil Service List (annual); Information respecting Incorporation of Companies. List of Companies incorporated under the various Companies Acts of the Parliament of Canada from 1867 to December 31st, 1913. Copies of Proclamations, Orders in Council and Documents relating to the European War.

Naval Service.—Annual Report. *Naval Branch*: Regulations for the entry of Naval Cadets. Regulations for the entry of Naval Instructors and of Medical Officers. *Tidal and Current Survey*: Tide Tables for the East Coast, Pacific Coast, points on the St. Lawrence Ship Canal, and for Port Nelson, Hudson Bay. Currents in the Gulf of St. Lawrence, the Entrance to the St. Lawrence, Belle Isle Strait, Southeast Coasts of Newfoundland and the amount of in-draught into the larger bays on the South Coast. Tables of Currents into the Bay of Fundy. *Radiotelegraph Branch*: Proceedings of the International Radiotelegraph Conference of London, 1912. Chart showing the Radiotelegraph stations in the Dominion of Canada. Postmaster General's Handbook for Radiotelegraph Operators (Instructions re handling of traffic, etc.). *Hydrographic Survey*: Sailing Directions, St. Lawrence Pilot, above and below Quebec. Sailing directions for the Canadian shores of Lake Erie (1897) and Lake Huron (1905) for the Georgian Bay and North Channel Pilot (1903). Charts of the River St. Lawrence above and below Quebec, St. Lawrence River above Montreal, viz., Lake St. Louis, Lake St. Francis, Coteau Landing to Lancaster, Lancaster Bar to Cornwall. Ottawa River; Lake of Two Mountains, Eastern Portion and Western Portion. Lake Winnipeg. Red River to Berens River, Berens River to Nelson River. Lake Ontario. Main Duck Island to Presqu'île. Presqu'île Bay. Lake Erie (plans of harbours). Lake Huron. Georgian Bay and North Channel. Lake Superior. Pacific Coast. Hudson Bay. *Fisheries Branch*: Fisheries Annual Report. Biological Report. Reports of Fisheries of Hudson Bay. Fish and How to Cook it. Report of Fish Culture (contained in Fisheries Annual Report). Check List of Canadian Fishes. Monthly Bulletin of Sea Fishery Statistics.

Railways and Canals.—Annual Report of the Department. Annual Reports of the Commissioners of the Transcontinental Railway and of the Board of Railway Commissioners for Canada. Annual Reports of the Comptroller of Statistics comprising (1) Railways; (2) Canals; (3) Telephones; (4) Telegraphs and (5) Express Companies.

Marine.—Marine Annual Report, containing Harbour Commissions, etc. Steamboat Inspection. List of Canadian Shipping. Reports of Expeditions to Hudson Bay. Port Directory of Canada. List of Lights, etc., in Canada: (a) Pacific Coast; (b) Atlantic Coast; (c) Inland Waters. Catalogue of Government Publications of use to Canadian Mariners.

Indian Affairs.—Annual Report. Indian Act, 1906, with Amendments to date. Schedule of Indian Reserves, 1913. Indian Treaties and Surrenders, Vols. I, II, III.

King's Printer and Controller of Stationery.—The Canada Gazette, published weekly by authority, with occasional supplements and extras, subscription, \$4 per annum payable in advance, single copies, 10 cents each number. Contains weekly a list of current Government publications, as required by Order-in-Council 1,522. Judgments of the Board of Railway Commissioners, bi-monthly, \$3 per annum; single copies, 20 cents; Exchequer Court Reports, \$4 per annum. Prices of blue-books are in nearly every case printed upon the front cover and are based practically on the cost of paper and press work. They may be ordered direct from the Chief Clerk of Distribution, Department of Public Printing and Stationery, or through any bookseller in the Dominion.

Inland Revenue.—Besides the Annual Report the principal official publications issued are circulars establishing standards under Section 26 of the Adulteration of Food Act and Bulletins issued in connection with the inspection of samples collected under the provisions of this Act.

Mines.—The Department of Mines examines the most important mineral deposits and sections of geological interest, makes scientific investigations of the mining and metallurgical industries of Canada and carries on exploratory work in

PROVINCIAL GOVERNMENT PUBLICATIONS.

the little-known parts of the country. Detailed reports and geological maps of mining camps, and maps and notes on explored routes have been published. Memoirs have also been issued dealing with economic mineral deposits that have a wide distribution throughout the country. High grade contoured topographical maps of a number of sections have been issued in recent years. Publications also appear from time to time, giving the results of investigations in palæontology, botany, zoology, mineralogy and anthropology. A summary report of the operations for the calendar year is published annually by each Branch of the Department, *i.e.*, Geological Survey Branch and Mines Branch, and other reports appear at irregular intervals throughout the year. The total number of publications exceeds 1,600. A copy of a report or map of any particular section may be obtained by applying to the Deputy Minister, Department of Mines, Ottawa.

Commission of Conservation.—Annual Reports, 1910-1915. Reports on Agriculture, Fisheries, Game and Fur-bearing Animals, Forests, Minerals, Public Health, Town Planning, Waters and Water-powers. Monthly Bulletin, entitled "Conservation"; Quarterly Bulletin entitled "Conservation of Life." For complete list, see Catalogue of Publications, revised to December 1, 1913.

Civil Service Commission.—Annual Report. Regulations of the Civil Service Commission. General Information respecting Civil Service Examinations.

Other Departments.—In addition to the publications above enumerated, Annual Reports are issued by the Department of Justice on the Penitentiaries of Canada, the Departments of External Affairs, of Public Works and of the Auditor General. The Department of Public Works has also published the Interim Report of the Georgian Bay Commission, by W. SANFORD EVANS, Chairman of the Commission.

List of Principal Publications of the Provincial Governments of Canada, as compiled from information supplied by the respective Governments.

NOTE.—The numbers within brackets are the numbers of the Bulletins. The publications of the larger provinces are arranged by Departments.

PRINCE EDWARD ISLAND.

Journal of the Legislative Assembly. Statutes of the Legislative Assembly. Royal Gazette. Annual Reports of the Provincial Auditor on Public Accounts and of the Departments of Public Works, Education, Agriculture, Falconwood Hospital (for the Insane) and Vital Statistics. Field Reports and Bulletins. Year Book and Periodical Reports of the Publicity Agent.

NOVA SCOTIA.

Royal Gazette. Journal of Education. Annual Reports on Public Accounts. Vital Statistics, Statistics of Incorporated Towns and Municipalities, Public Health, Education, Industries and Immigration, Agriculture, Crown Lands, Mines, Subsidized Railways and other Public Works, Rural Telephones, Humane Institutions, Public Charities, Penal Institutions, Neglected Children, Temperance and Utilities. Also Annual Reports of the Provincial Secretary, the Factory Inspector and of the Road and Game Commissioners.

NEW BRUNSWICK.

Annual Reports of the Auditor General, of the Board of Health, of the Departments of Education and Agriculture (including Horticulture), Annual Reports on Public Works, Crown Lands, the Hospital for the Insane, the Factory Report, Report on the Jordan Memorial Tuberculosis Sanatorium at River Glade and Report of Women's Institutes.

ADMINISTRATION.

QUEBEC.

NOTE.—The titles of publications available in the English language are printed in English.

Attorney General.—Annual Report of Prison Inspectors; Annual Report of Public Utilities Commission.

Provincial Secretary.—Annual Report of the Secretary and Registrar; Annual Report of Inspectors of Reformatory Schools and Insane Asylums; Annual Report of the Provincial Board of Health; Statistical Year-book; Municipal Statistics (annual); Judicial Statistics (annual); Statistics (annual): (a) of Penal Establishments, (b) of Insane Asylums, (c) of Philanthropic Institutions; The Official Gazette (weekly); The Statutes of the Province (annual); Revised Statutes of the Province (1909).

Treasury.—Annual Statement of Public Accounts; Annual Estimates; List of Municipalities in connection with by-laws respecting prohibition, limitation, and licenses for the sale of intoxicating liquors.

Lands and Forests.—Annual Report of the Minister; La Gaspésie, J.-C. LANGELIER, 1885; Surveyed Townships and Explored Territories, 1889; Richesse Forestière de la Province de Québec, J.-C. LANGELIER, 1905; The Forest, FERNOW, 1905; Arbres de Commerce de la Province de Québec, 1906; Table of Families of Twelve Children, EUGENE ROUILLARD, 1904, 1906; Townships Surveyed and Territories Explored, 1908; List of Timber License Holders, 1911; List of Persons Authorized to Act as Cullers, 1911, 1912; Dictionnaire des Lacs et Rivières de la Province de Québec, EUGENE ROUILLARD, 1914; Bulletin No. 1 of the Forestry Service; Scieries et Marchands de Bois de la Province de Québec, T. GIROUX, 1913; White Coal, EUGENE ROUILLARD, 1909; Table of Water Powers granted by the Province of Quebec, from 1st July, 1863, to 31st December, 1913, A. AMOS; Bulletin No. 2, of the Forestry Service, PICHÉ and BEDARD, 1914.

Agriculture.—*Annual Reports:* Department of Agriculture; Competition for Agricultural Merit; Dairymen's Association; Pomological Society; Report of the Quebec Society for the Protection of Plants from Insects and Fungus Diseases; Rapport des Concours de Récoltes sur pied (annual); Rapport de la Convention des Missionnaires Agricoles; Rapport des Sociétés d'Agriculture et des Cercles Agricoles; Journal of Agriculture and Horticulture, illustrated (monthly). *Bulletins:* On the Appearance of Crops, July; On the Yield of Crops, October; (1) Plans of Cheese Factories or Creameries and of Combined Factories; (2) Le Drainage Pratique, C. MICHAUD, 1914; (3) Les Engrais Chimiques, H. NAGANT, 1913; (4) Dix Années de Pratique et d'Expérience à la Basse-cour, Inst. d'Oka, 1914; (5) Engraissement de la Volaille, Inst. d'Oka, 1914; Culture du Tabac, GAREAU & PLANTE, 1914; (7) Le Cheval du Cultivateur, J. YUKON TERRITORY.

Ordinary Journals and Sessional Papers of the Territorial Council. The Sessional Papers contain Reports of the Territorial Officers, including those of the Superintendent of Works, Health Officer, Territorial Assayer, Chief License Inspector and Superintendent of Schools.

XII.—PRINCIPAL EVENTS OF THE YEAR 1915.

DOMINION LEGISLATION.

The fifth session of the twelfth Parliament of Canada was held at Ottawa from February 4 to April 15, 1915. During this session 98 statutes were enacted, 24 of them being public general acts and the remaining 74 local and private acts. The session was largely devoted to measures arising out of the war

Finance of the War.—It was inevitable that the sudden outbreak of war, by which imports from hostile countries ceased, should occasion a serious loss of revenue from import duties. For the fiscal year ended March 31, 1915, the revenue totalled \$133,073,482, including war tax revenue amounting to \$98,057, as compared with \$163,174,394 in the previous year; so that the loss of revenue amounted to about \$30,000,000. The Minister of Finance, in his budget speech of February 11, stated that the Government policy had been, in the interest of employment, to maintain as far as possible the programme of public works under construction, but to restrict the undertaking of new works until the financial situation became clearer. He proposed that the full amount required for war expenditures should be borrowed on the ground that these expenditures were being incurred for the purpose of preserving for future generations national and individual liberty and constitutional freedom. In addition to the special war appropriation of \$50,000,000 made in August, 1914 (see Year Book 1914, page 677), for expenses to March 31, 1915, the War Appropriation Act, 1915, assented to on April 15 (chapter 23), provided for a further sum of \$100,000,000 to March 31, 1916, for promoting the defence and security of Canada, the conduct of naval and military operations, the continuance of trade and industry and the prosecution of measures deemed necessary owing to the state of war.

FINANCE OF THE WAR.

The Customs Tariff War Revenue Act, 1915 (chapter 3), and the Special War Revenue Act, 1915 (chapter 8), were assented to on April 8. The first imposed duties or additional duties of 5 per cent under the British Preferential Tariff, and of $7\frac{1}{2}$ per cent under the Intermediate and General Tariffs on all goods in Schedule A of the Customs Tariff, whether liable to or free of duty, subject however to exemptions of which the following are the most important: fish caught by Canadian and Newfoundland fishermen, goods used in the manufacture of agricultural machinery and of binder twine, certain goods used for medical and surgical purposes, anthracite coal, steel for the manufacture of rifles, silk, chemical fertilizers, cotton seed cake and meal. By the second Act new taxes were imposed as follows: on every Bank, $\frac{1}{4}$ of 1 per cent on the amount of its notes in circulation, on every Trust and Loan Company, 1 per cent on its Canadian income, and on every Insurance Company other than Life and Marine Insurance, 1 per cent on the net premiums received in Canada; 1 cent on every cablegram or telegram for which a charge of 15 cents or more is made, 5 cents on the first \$5 and 5 cents on every additional \$5 on railway and steamboat tickets to places in North America and the British West Indies; on tickets to places outside of these \$1 if the price exceeds \$10, \$3 if it exceeds \$40 and \$5 if it exceeds \$65; 10 cents on every sleeping car berth and 5 cents on every parlour car seat. All the last named taxes are to be collected by the companies concerned and transmitted to the Government. The Act also imposes the following stamp duties: 2 cents on every bank cheque and on every express and post office money order and 1 cent on every postal note, 2 cents on every bill of lading, 1 cent in addition to postage on every letter and post card, 1 cent for every 25 cents of the retail price of proprietary medicines and perfumery, 3 cents for a pint or less and 5 cents for every quart of non-sparkling wine, and 13 cents for $\frac{1}{2}$ pint or less and 25 cents for every pint of sparkling wine.

War Loan of 1915.—Under the authority of the War Appropriation Act (chapter 23), applications were invited on November 22 for participation in a war loan consisting of the issue of bonds to the value of \$50,000,000 maturing on December 1, 1925, and bearing interest at five per cent, payable half yearly and exempt from taxes. The price of the issue was fixed at $97\frac{1}{2}$ per cent. At the closing of the subscription lists on November 30, it was announced that more than double the \$50,000,000 asked for had been subscribed, and the amount of the loan was increased to \$100,000,000.

Other Measures arising out of War Conditions.—Chapter 2, an Act to amend the Canadian Patriotic Fund Act, 1914, authorizes the Corporation of the Patriotic Fund to assist the dependents of residents of Newfoundland who may be serving with the Canadian forces, and also to assist for a period not longer than six months in each case Canadians who return incapacitated and the dependents of men who die of wounds or disease on active service. Before the passing of this Act, help could be given from the fund only to the dependents of men on actual service. An Act to amend the Senate and House of Commons Act (chapter 7) permits officers and men of the navy and army who are members of either House to sit notwithstanding the fact that they receive naval or

PRINCIPAL EVENTS OF THE YEAR 1915.

military pay, and provides that time of absence on active service is not to be deducted in calculating a member's sessional allowance. The Soldiers' Voting Act (chapter 11), which was assented to on April 15, provides for the exercise of the electoral franchise by every soldier, aged 21 years and over, of the Canadian troops in the event of a general election in Canada during their absence on active service. Chapter 22, amending the Yukon Placer Mining Act, preserves the right of holders of mining claims who are on active service, and Chapter 5 authorizes an extension of the time in which licenses may be applied for by insurance companies, whose power to do so might expire before the end of the next session of Parliament.

Acts relating to Agriculture.—An Act to amend the Bank Act (chapter 1) allows banks to lend money to the owner, tenant or occupier of land for the purchase of seed grain, upon the security of the crop to be grown from such seed grain. Chapter 20 empowers the Governor-General-in-Council to distribute during 1915 seed grain, fodder, etc., among farmers in Saskatchewan and Alberta, and confirms agreements relating to such distribution made between the Minister of the Interior and the Governments of Saskatchewan and Alberta. An Act to amend the Canada Grain Act (chapter 10) makes the certificate of weighing at a terminal elevator final, and makes the inspector's certificate of grade prima facie evidence in case of litigation. The Act also extends the powers of the Board of Grain Commissioners in investigating and dealing with questions of shortage in delivery.

Amendments of Election Law.—Chapter 13 amends the Dominion Controverted Elections Act with a view to simplifying procedure and expediting trial in cases under the Act. An Act to amend the Dominion Elections Act (chapter 14) requires every employer to give every voter in his employ an additional hour, other than the noon hour, for voting on a polling day. It applies to all employees except those engaged in running trains. The Act also puts Saskatchewan and Alberta on the same footing as the other provinces in respect of the procedure on the death of a candidate between nomination and polling. By Chapter 19, various changes are made in the schedules of the Representation Act, 1914, relating to the boundaries of electoral districts.

Railway Acts.—An Act to amend the Government Railways Act (chapter 16) empowers the Minister of Railways to purchase under certain conditions, railways in Quebec and the Maritime provinces, which can be operated more usefully as part of the Government Railways. It also confirms purchase agreements made with the International Railway of New Brunswick and the New Brunswick and Prince Edward Island Railway. By an Act to amend the National Transcontinental Railway Act (chapter 18) the Minister of Railways is authorized to lease or acquire the Lake Superior branch of the Grand Trunk Pacific Railway.

Miscellaneous.—Chapter 4 confirms issues of Dominion notes to the amount of \$26,000,000, of which \$10,000,000 were for the Canadian Northern Railway, \$6,000,000 were for the Grand Trunk Pacific Railway and \$10,000,000 were for the general purposes of the Dominion. An Act to amend the Judges Act (chapter 6) provides

ACTS OF PARLIAMENT.

that there shall be 13 instead of 12 judges and junior judges of county courts in British Columbia, and 11 instead of 8 district court judges in Alberta. The Criminal Code Amendment Act (chapter 12) makes indictable offences the assisting of an alien enemy to leave Canada and the delivering to the Government of defective naval or military stores. The Act makes it an offence subject to summary conviction to perform a copyright dramatic or other work without the consent of the author. Chapter 9, amending the Adulteration Act, requires the special labelling of maple syrup and sugar, and restricts the use of the word maple to pure products. Chapter 15 amends the Gold and Silver Marking Act by making violations of that Act liable to summary conviction. An Act to amend the Inland Revenue Act (chapter 17) permits the removal in bond of tobacco for use as ship's stores. Chapter 21 to amend the Winding-up Act relates to appeals under that Act.

Naturalization Act, 1914.—On January 1, 1915, the Naturalization Act, 1914, came into effect. This Act, which is known as the Imperial Naturalization Act, follows the lines laid down in the Imperial legislation of the same year and confers on persons naturalized under it all the rights, powers and privileges of a natural-born British subject. Under chapter 77, R.S.C., which is still in force, and will remain in force until January 1, 1918, a person naturalized under the Act becomes a British subject in Canada only, and the Act applies only to persons residing in Canada on January 1, 1915. During the year ended December 31, 1915, 120 persons were naturalized under the Act of 1914, the former nationalities of this number including 48 Americans, three French, eight Danes, nine Japanese, six Rumanians, six Russians, 15 Swedes, eight Swiss and 17 of other nationalities.

PROVINCIAL LEGISLATION.

The following is a synopsis of the more important Acts passed by the provincial legislatures during the year 1915. The provincial statutes of 1915 are all entitled 5 Geo. V, excepting those of Saskatchewan which are entitled 6 Geo. V.

Provincial Acts relating to the War.—In all provinces acts were passed to deal with conditions arising from the war. Chapter 6 (Nova Scotia), chapter 10 (New Brunswick), chapter 65 (Quebec), and chapter 37 (Ontario) are acts authorizing municipalities to contribute to the Patriotic Fund and similar funds and ratifying contributions previously made. Chapter 7 (Nova Scotia), chapter 12 (New Brunswick) and chapter 2 (Quebec) are acts confirming gifts made by the provinces to the British Government, the French National Relief Committee, etc., and providing for the same. Acts providing for a moratorium for debts, were passed in several of the provinces. In New Brunswick, chapter 11 empowers the Lieutenant-Governor-in-Council to authorize by proclamation the postponement of any debts or liabilities for such time and under such conditions as may be stated in the proclamation. In British Columbia, the Lieutenant-Governor may by chapter 35 authorize any court of the province to postpone payments due under any instrument

PRINCIPAL EVENTS OF THE YEAR 1915.

respecting lands, etc., and may by chapter 48 postpone the payment of moneys payable to the Crown. The Ontario Act (chapter 22) deals only with mortgages and contracts for purchase of land made prior to August 4, 1914, and provides that no foreclosure or like process shall be made in connection therewith, except by special leave of a judge. The act is to have effect till nine months after the end of the war. In Manitoba, under chapter 88, actions, with certain exceptions, are not to be brought against persons on active service in the war, nor against their dependents, and pending actions against such persons are to be stayed.

The following were among the other more important Acts of the provincial legislatures.

Prince Edward Island.—The Fox Enrolment Act (chapter 15) provides that a register shall be kept in the provincial Department of Agriculture of all foxes in captivity. By chapter 24 the Silver Black Fox Breeders' Association of Prince Edward Island is incorporated.

Nova Scotia.—The Workmen's Compensation Act (chapter 1) creates a Board of three members to administer the Act under which compensation is to be paid from funds provided by the taxation of industries. Employers are to be assessed by classes, and industries are divided into 20 classes which may be subdivided by the Board. The Board may allow the Dominion Steel Corporation and the Nova Scotia Steel and Coal Company to contract out and provide their own compensation schemes. Under the Town Planning Act (chapter 3) every local authority is to create a local board with power to hold land, and to make and carry out town planning schemes. The Act is to be administered under the supervision and regulation of the Commissioner of Public Works. The Provincial War Tax Act (chapter 8) imposes a tax of 1 mill on the dollar on all rateable property and income during 1915.

New Brunswick.—Chapter 18 provides for the inspection and registration of stallions and chapter 19 for the suppression of infectious and contagious diseases among bees and the protection of bees. Inspectors are appointed under both Acts. Chapter 46 gives power to the provincial Secretary-Treasurer to legalize marriages which have been solemnized by persons who are not registered as authorized to solemnize marriages in the province. By chapter 7 taxes or additional taxes are imposed on certain companies, including insurance companies, trust and loan companies, express, telephone, telegraph and street railway companies and banks.

Quebec.—An Act to amend the Quebec Public Health Act (chapter 59) deals with the pollution and purification of water supplies. The Superior Board of Health of the province is given additional powers to investigate and to compel municipalities to take proper action for securing pure water supplies. Chapter 71 forbids the retention by an employer of any part of an employee's salary or wages for the purpose of paying premiums on sickness or accident insurance. Under an Act respecting private detectives (chapter 57) no person shall act as a private detective or use the name of detective without a permit from the Provincial Treasurer. Chapter 18 is an Act providing for the appointment of an Agent-General for the province in Belgium.

PROVINCIAL LEGISLATION.

Ontario.—The Liquor License Act, 1915 (chapter 39), is an amending act, creating a Board of five license commissioners with jurisdiction throughout the province and with power to act as a licensing court, to make regulations prohibiting the sale of liquor in particular localities or to particular classes of persons, and to fix the hours in which liquor may be sold. There is to be no sale of liquor under shop licenses after 7 p.m. on any day.¹ By the Municipal Amendments Act (chapter 34) the powers of the Ontario Municipal Board are increased by the transfer of certain powers from the Lieutenant-Governor. The Board is authorized to erect police villages in cases where the county fails to do so on petition, and police villages are to have the right of borrowing money for electric light and power works. Municipalities are authorized to license and register dogs. A board of control is to be compulsory in all cities of not less than 100,000 nor more than 200,000 population. Under the Rivers and Streams Act (chapter 15), the Lieutenant-Governor may by proclamation make a river subject to this Act and under the control of the Minister of Lands and Mines, who shall decide all questions as to rights to make improvements, to float timber and to alter or obstruct the flow of water. The Ontario Highways Act (chapter 17) creates a Department of Public Highways to be presided over by the Minister of Public Works, who becomes Minister of Public Works and Highways. Provision is made for financial aid to be given to counties for the maintenance and repair of roads, and for grants towards the salaries of road overseers, who may be appointed by townships. Work on suburban roads is to be directed by commissions representing the cities and counties concerned in each case, but the roads are to remain county roads. Special provisions are made as to the construction, etc., of main roads which it is advisable to construct as one work, and the Lieutenant-Governor may appoint boards of trustees to control such works. Chapter 45 is an act to confirm regulations previously made respecting the board of trustees of Roman Catholic separate schools at Ottawa. Under the Provincial War Tax Act (chapter 3), a tax of one mill on the dollar is to be levied in each municipality and county on all rateable property. It is to be levied and collected with the municipal and county taxes and the councils may exempt persons who are on active service and their dependents. Chapter 4 authorizes a provincial loan of \$4,000,000.

Manitoba.—The Dairy Act (chapter 14) makes regulations respecting the formation of associations for manufacturing cheese, butter, etc., the sanitation and operation of dairies and the sale of dairy products. By chapter 70, an Act to enable municipalities to borrow limited amounts of money, any rural municipality may borrow up to \$30,000 for furnishing seed grain and seed potatoes to farms to the value of not more than \$450 to any one individual, and under the Seed Grain Unorganized Districts Act (chapter 72), \$100,000 may be appropriated out of the consolidated fund to be spent by the Minister of Agriculture on seed grain, etc., for distribution in unorganized districts.

¹This Act is superseded by the Ontario Temperance Act, assented to on April 27, 1916, chapter 50 of the Statutes of 1916. It prohibits the sale of intoxicating liquors in Ontario.

PRINCIPAL EVENTS OF THE YEAR 1915.

Saskatchewan.—The judicial system is remodelled by the Court of Appeal Act (chapter 9) and the King's Bench Act (chapter 10). The Supreme Court of Saskatchewan is abolished, and the Court of King's Bench is given all the jurisdiction, excepting appeals of the Supreme Court. The Court of Appeals is to consist of the Chief Justice and three other judges, who are also judges of the King's Bench. It is to sit at Regina and is to have all the powers hitherto possessed by the Supreme Court sitting *en banc* as an appeal court from all other courts of the province. The Farm Implement Act (chapter 28) regulates the sale of such implements. Vendors are required to file with the Minister of Agriculture descriptions and prices of implements which they offer for sale, and forms of contract for such sales are specified in the Act. The municipal law of the province is consolidated and amended by chapters 16 to 21 inclusive. Under the Act respecting homesteads (chapter 29) no sale or mortgage of a homestead shall be valid without the signature of the owner's wife, if any, and the wife may file a caveat to protect her rights in the homestead. The Liquor License Act (chapter 39) prohibits the sale of liquor at all places other than stores established by the Act. These are to be under the general management of a specially appointed commissioner, and no person is to be employed in them who has been in the liquor business during the five previous years. The quantity of liquor to be sold to any one purchaser is limited, and sales are to be made only for cash and only in sealed packages. No liquor shall be drunk in a store, in a public place or on a train nor anywhere but in a dwelling house. The commissioner may issue to physicians and druggists permits to sell liquor for medicinal purposes. The manufacture of liquor is not prohibited. A provincial referendum is to be taken not later than 1919 to decide if the system established by the Act shall be continued. The Hotel Act (chapter 40) authorizes municipalities to appoint boards to consider questions of public accommodation, to license hotels and to remit taxes on hotels. Until the provincial referendum on the Liquor Act, municipal councils may lease premises for public accommodation; after the referendum they may purchase. No intoxicating liquors are to be kept or consumed in public hotels. A provincial office is established by the Act to be in charge of a Director of Public Accommodation.

Alberta.—Under the Married Women's Home Protection Act (chapter 4), a married woman may cause a caveat to be filed forbidding the registration of a transfer, mortgage or encumbrance of a homestead. The Public Utilities Act (chapter 5) creates a Board of Public Utility Commissioners with jurisdiction in questions respecting railways and street railways, tolls and charges for public utilities, the use of roadways for wires, pipes, etc., and disputes between public utilities and municipalities. By the Stock Inspection Act (chapter 11) the Minister of Agriculture is given power to appoint special inspectors of stock shipped in the province; shipment without inspection is forbidden, and butchers and hide dealers are required to take out licenses and to keep records. The Irrigation District Act (chapter 13) requires the Minister of Public Works on petition of a majority of owners in an area to make it an irrigation district under the direction of three elected trustees. Loans

CANADIAN EXPEDITIONARY FORCES.

may be authorized by by-law passed by the voters of the district. Under the Municipal Co-operative Hail Insurance Act (chapter 18) not less than twenty municipalities may combine to form a Hail Insurance District, which shall be under the direction of the Hail Insurance Board of Alberta, consisting of three members. The Board will assess the municipalities for taxation to pay the Board's expenses and claims for damage to crops by hail. A municipality may withdraw from the district after the expiration of five years.

British Columbia.—By the Constitution Act Amendment Act (chapter 14) the membership of the Legislative Assembly is increased from 42 to 47, and a redistribution is made. The Agricultural Act (chapter 2), creates a commission with power to issue securities and to make loans for acquiring and improving land and for other agricultural purposes. Provisions are made respecting the formation of associations (without share capital) for agricultural purposes and of Women's Institutes, also of associations and companies (with share capital) for dealing in farm produce, requisites, etc. A Board of Horticulture is created to regulate the prevention of disease in orchards, gardens, etc. By the Noxious Weeds Act (chapter 66) owners and occupiers of land are required to burn or effectively destroy noxious weeds between April 1 and November 1, in order to prevent the ripening and scattering of seeds. Inspectors are to be appointed under the Act, which applies to municipalities and railways.

Canadian Expeditionary Forces.—The initial steps taken by Canada upon the outbreak of the war in 1914 are described in the Year Book for 1914 (pp. 676-678). The first division of troops, consisting of over 33,000 officers and men, who landed in England on October 16, 1914, received further training on Salisbury Plain during the fall and winter of 1914-15 under conditions which were particularly trying owing to excessively wet weather. On February 15, 1915, the division began to arrive in France. Proceeding to Flanders they speedily proved themselves to be capable and efficient soldiers, whether as infantry in the trenches or as artillerymen serving excellent guns. During the spring and summer they were engaged in four principal fights, viz., Neuve Chapelle (March 10), Ypres (April 22), Festubert (May 9), and Givenchy (June 15). In his despatches relating to the second battle of Ypres, which began on April 22, when contrary to international conventions and the rules of civilized warfare, the Germans began the use of poisonous and asphyxiating gases, Sir John French wrote as follows: "In spite of the danger to which they were exposed, the Canadians held their ground with a magnificent display of tenacity and courage; and it is not too much to say that the bearing and conduct of these splendid troops averted a disaster which might have been attended with the most serious consequences." The second division of Canadian troops began to land in England on March 6, and in November a third division was offered to and accepted by the Imperial authorities. At the end of the year 1915, the number of Canadian troops recruited for service overseas reached 212,690 out of an authorized total of 250,000. In a New Year's message to the Canadian people, issued on December 31, 1915, the Prime Minister (Sir Robert Borden) stated that from January 1, 1916,

PRINCIPAL EVENTS OF THE YEAR 1915.

the authorized forces of Canada would be increased to 500,000, this announcement being made "in token of Canada's unflinching resolve to crown the justice of our cause with victory and an abiding peace." Legal authority for the increase of the Canadian troops to 500,000 was conferred by Order-in-Council of January 12, 1916. Owing to the character of the fighting the losses amongst Canadian troops in the field have necessarily been severe. Up to November 30, 1915, these casualties totalled 539 officers and 13,017 of other ranks; they included 107 officers and 1,855 other ranks killed in action; 30 officers, 786 other ranks died of wounds; 6 officers, 164 other ranks died of diseases; 339 officers, 7,951 other ranks wounded; 37 officers, 1,267 other ranks prisoners of war; 20 officers, 994 other ranks reported missing¹.

Canadian Contributions for Patriotic Purposes.—The unflinching valour and splendid heroism of the Canadian troops in the field have been a source of keen gratification and pride to the people of the Dominion, who in numerous ways have striven to sustain the national and imperial cause for which the war is being waged on the battlefields of Europe. The women of Canada have shown noble devotion and enthusiasm in the raising of funds, the provision of comforts and the institution of various associations for the assistance of soldiers and their dependents. High tributes have been paid to the efficiency of the Canadian hospitals and the skill and devotion of the medical officers and nurses. An inquiry instituted by the Census and Statistics Office under special instructions from the Dominion Government showed that up to March 31, 1916, the total value of the Canadian contributions actually paid amounted to \$27,881,165, as follows:

Fund.	Value of contributions paid.
	\$
Canadian Patriotic	9,554,981
Donations of Dominion and Provincial Governments to Imperial Government	4,695,851
Canadian Red Cross	3,593,924
British Red Cross	1,884,033
Contributions for Machine Guns and to Military Units	1,923,245
Belgian Relief	1,469,529
Jewish Relief	103,129
Hospitals (various)	536,704
Miscellaneous	4,119,769
Total	27,881,165

The various Funds included in the foregoing statement number altogether 33, as follows: Canadian Patriotic; Donations of Dominion and Provincial Governments; Canadian Red Cross; British Red Cross; Contributions for machine guns, field kitchens, field ambulances, etc.; Belgian Relief; Jewish Relief; Serbian Relief; Secours National; Comité

¹These figures are from "Canada in Flanders," by Sir Max Aitken, M.P., being Vol. I of the Official Story of the Canadian Expeditionary Force.

CONTRIBUTIONS FOR PATRIOTIC PURPOSES.

France-Amérique; Soldiers' Comforts; Field Comforts' Association; Canadian War Contingent's Association; the Maple Leaf Club; Recruiting Committee of New Brunswick; Aeroplane Fund of Winnipeg; Tobacco Funds of certain newspapers; Soldiers' Gazette; Relief Fund of Winnipeg Telegram; European War Veterans' Association of Calgary; Returned Soldiers' Fund of Winnipeg; Manitoba Telephone Employees and the following Hospital Funds: Toronto University; Queen's University; French Canadian Hospital; Luton House; Seamen's Hospital; Queen Mary's Hospital; Cliveden; Sir Sandford Fleming Home; Scottish Women's Hospital; Women's Hospital Ship; other Military Hospitals. Not included in the statement is the value of considerable quantities of contributions in kind, the donations of individuals apart from organized funds and subscriptions promised but not yet paid. The distribution of the contributions paid by provinces is as follows:

Province.	Amount.
	\$
Prince Edward Island.....	314,288
Nova Scotia.....	1,516,015
New Brunswick.....	566,153
Quebec.....	4,572,882
Ontario.....	13,730,438
Manitoba.....	738,520
Saskatchewan.....	919,156
Alberta.....	943,413
British Columbia.....	988,062
Yukon Territory.....	26,757
Not separated by provinces.....	3,565,481
Total.....	27,881,165

Visits to England of Canadian Cabinet Ministers.—On July 8 the Prime Minister (Sir Robert Borden) and a few days later the Minister of Militia and Defence (Major-Gen. Sir Sam Hughes) arrived in England for conference with the British authorities; they also visited France and inspected the Canadian troops. On July 29, Sir Robert Borden received the Freedom of the city of London, and on August 24, General Hughes was knighted by the King. An event of imperial significance was the presence of Sir Robert Borden at a meeting of the British Cabinet on July 14.

Arctic Exploration.—Apprehensions as to the safety of members of the Canadian Expedition, which is engaged on a Government mission of scientific exploration in the Arctic regions, were happily dispelled on September 18, when news of the Expedition was received by the Department of the Naval Service in Ottawa. The Expedition, which is under the command of Mr. Vilhjalmur Stefansson, sailed on July 21, 1913, in three Canadian Government steamers, the "Karluk" (321 tons), the "Alaska" (50 tons), and the "Mary Sachs" (41 tons). It was divided into two parties, one party receiving instructions to explore Beaufort Sea, Banks Land and Prince Patrick Island, and the other the

PRINCIPAL EVENTS OF THE YEAR 1915.

north coast of Canada from Cape Parry to Kent Peninsula and the shores of Victoria Island. The northern division under command of Mr. Stefansson sailed for Banks Land where they were to establish a base from which to carry on the work of the division. Near Thetis Island their vessel, the "Karluk," became ice bound. Mr. Stefansson with three other members of the party went to the main-land on a hunting expedition. During their absence, the party in the "Karluk" were carried far out of their sight by the ice drift, and they were obliged to travel westward along the coast to Collinson Point, where they joined the southern party, wintering there. On January 11, 1914, in N. lat. $72^{\circ}8'$, W. long. $173^{\circ}50'$, the "Karluk" was crushed by the ice. Eight members of the party were lost in attempting to reach land. The remaining members of the party succeeded in landing on Wrangel Island. From this point Captain R. A. Bartlett journeyed on foot over the ice to the Siberian coast, a distance of 160 miles. This journey was particularly hazardous owing to the soft snow and open water encountered. He arrived at Emma Harbour, Siberia, on May 16, 1914, fifty-nine days after leaving Wrangel Island. From Emma Harbour he sailed to St. Michaels, Alaska, whence he reported the loss of the "Karluk" and the whereabouts of the survivors. The Department of the Naval Service despatched four vessels to their assistance. Eight survivors on Wrangel Island were rescued by the "King and Wing," and were later transferred to the United States revenue cutter "Bear," which landed them at Victoria, B.C. Three of the members of this party had died whilst on Wrangel Island.

The southern division, using Collinson Point as a base, successfully carried on the scientific work of the expedition during the winter of 1913-14. They were joined at this point by Mr. Stefansson on December 14, 1913. During the years 1914-15 and 1915-16, the southern division have successfully carried out the investigation of the copper-bearing rocks between Cape Parry and Kent Peninsula. A special study of the little known tribes of Eskimos in that vicinity has also been made. The shore line and many of the largest rivers have been charted. The party completed their work and returned to civilization in the summer of 1916. On March 22, 1914, Mr. Stefansson with two companions set out from Martin Point, Alaska, on an ice trip over Beaufort Sea. Their journey was in a general northerly direction along the 140^{th} meridian. They proceeded north to about 73° N. lat., where they arrived on April 26. Ice conditions then forced them to make for land. They landed on Norway Island on the west coast of Banks Land, N. lat. $73^{\circ}40'$, W. long. 124° , on June 25. The summer months were spent on Banks Land, mapping the shore line and taking observations. Maps of Norway and Bernard Islands and Wilkins River were made. From observations taken it has also been ascertained that the west coast of Banks Land abounds in harbours which afford excellent protection to ships. In September, 1914, the party journeyed southward along the shore of Banks Land, arriving on September 11 at Cape Kellett on the southwest coast of this Island, where they met a party from the southern division who had come north in the "Mary Sachs" with provisions. Winter quarters were established at Kellett, and the remainder of the season

ARCTIC EXPLORATION.

was spent in obtaining provisions for the winter camp. On February 20, Mr. Stefansson, accompanied by Dr. R. M. Anderson and Mr. Thomson, started on an ice trip north. They journeyed along the coast of Banks Land to Alfred Point, and thence on to the ice in a general northerly direction. Early in May the ice drift carried them in an easterly direction and they were obliged to land on the west coast of Prince Patrick Island in N. lat. 76. They followed the coast north taking observations and making careful surveys as they proceeded. Upon the islands north of Prince Patrick Island they discovered the records of the McClintock Expedition of 1854. From these islands they journeyed across the ice to the north until June 18 when land, not shown on any chart, was sighted. The shores of the new land were reached at N. lat. 77°43', W. long. 115°43', and it was claimed as a part of the British Empire. From a point twenty miles inland and 2,000 feet above the sea level, observations taken showed that the land was mountainous, some of the peaks appearing 50 miles distant. A careful investigation for a distance of 20 miles to the west was made, and observations were taken from high points. Mountains, appearing blue in the distance, were seen. The eastern and western extremities of the land were not located. The coast line examined runs N. of N.W. Game was found to be plentiful, seals, caribou, wolves, foxes, lemmings, geese and many other varieties of Arctic animals having been seen. Owing to the lateness of the season, the party were obliged to return to Cape Kellett. They set out on June 22, following the east coast of Prince Patrick Island, and arrived at Kellett on August 8, 1915. Mr. Stefansson proceeded from Kellett to Herschel Island, from which point reports of operations of the northern division were forwarded to the Department of the Naval Service. He then returned to Kellett to prepare for the coming season's operations. During the season of 1915-16, Mr. Stefansson has continued to explore Beaufort Sea with Kellett as a base.

Obituary.—Jan. 9. The Hon. George A. Clare, M.P. for Waterloo South, Ont. Captain Denzill O. C. Newton, M.V.O., Princess Patricia's Light Infantry Battalion, formerly Aide-de-Camp to Earl Grey, Governor-General of Canada (killed in action). Jan. 17. Major Z. T. Wood, Assistant Commissioner, Royal Northwest Mounted Police. Feb. 8. Sir François Langelier, K.C.M.G., Lieutenant-Governor of the province of Quebec. Mar. 9. James W. Richards, M.P. for Prince, P.E.I. Mar. 10. William Himsworth, Deputy Minister of Inland Revenue; The Hon. Samuel Barker, M.P. for Hamilton, Ont. Mar. 20. Lt.-Col. F. D. Farquhar, D.S.O., Officer commanding the Princess Patricia's Canadian Light Infantry Battalion, formerly Military Secretary to H.R.H. the Duke of Connaught, Governor-General of Canada (killed in action). June 3. The Hon. Siméon Beaudin, Justice of the Superior Court of Quebec. July 22. Sir Sandford Fleming, K.C.M.G., formerly Engineer in Chief, Canadian Pacific Railway (aged 88). Aug. 8. The Hon. Honoré Hippolyte Achille Gervais, Judge of the Court of King's Bench. Sept. 8. The Hon. Sir Charles Eugène Boucher de Boucherville, K.C.M.G. (aged 94). Sept. 11. Sir William Van Horne, former President and Ex-Chairman of Directors of the Canadian Pacific Railway. Nov. 8. The Hon. W. Mackay, M.D., Cape Breton, N.S. Nov.

PRINCIPAL EVENTS OF THE YEAR 1915.

13. The Hon. W. H. Montague, Minister without portfolio, 1894-1895, Secretary of State 1895-96, Minister of Agriculture 1896. Nov. 15. James Reid, M.P. for Restigouche, N.B. Sir Frederick Eustace Barker, of St. John, N.B., formerly Chief Justice of the Supreme Court of New Brunswick.

The late Sir Charles Tupper.—On Saturday, October 30, 1915, the death occurred at Bexley Heath, Kent, England, of Sir Charles Tupper, Bt., at the advanced age of 94, the last survivor of the "Fathers of Confederation." Charles Tupper was born at Amherst, Nova Scotia, on July 2, 1821, and was of United Empire Loyalist descent. Having studied medicine and surgery he took the degree of M.D. from the University of Edinburgh and the Diploma of the Royal College of Surgeons in 1843, and practised his profession in Nova Scotia. In 1855, he entered the Nova Scotia Legislative Assembly and took a prominent part in the proceedings which culminated in the Confederation of Canada in 1867, when he was prime minister of Nova Scotia. From this time he occupied numerous important positions in the Dominion Government, being President of the Privy Council 1870-72, Minister of Inland Revenue 1872, of Customs 1873, of Public Works 1878-79, of Railways and Canals 1879-1884, of Finance 1887-8, Secretary of State 1896 and Prime Minister May 1 to July 8, 1896. From 1884-1887 and from 1888-1896 he was High Commissioner for Canada in Great Britain. He was one of H.M. plenipotentiaries on the Fishery Commission which met at Washington in 1887-88 and also in 1893 for the negotiations of a treaty with France. He was created C.B. in 1867, K.C.M.G. in 1879, G.C.M.G. in 1886, a baronet in 1888, and was sworn of the Imperial Privy Council in 1908. He received honorary degrees from the Universities of Cambridge, Edinburgh, Queen's and Acadia.
